<i>Preface to the Second Edition</i>	xxxix
<i>Acknowledgments</i>	xxxv

1	The Big Picture	1
1.1	Why Optical Networks?	1
1.2	Objectives of an Optical Network Architecture	4
1.3	Optics versus Electronics: The Case for Transparent Multiwavelength Networks	9
1.4	Optics and Electronics: The Case for Multilayered Networks	12
1.5	Network Hierarchies	16
1.6	A Little History	18
1.7	Overview and Road Map	22
2	The Layered Architecture and Its Resources	28
2.1	Layers and Sublayers	29
2.2	Network Links: Spectrum Partitioning	34
2.3	Optical Network Nodes: Routing, Switching, and Wavelength Conversion	39
2.3.1	Static Nodes	40
2.3.2	Dynamic Nodes	46
2.3.3	Wavelength Converters	63
2.4	Network Access Stations	67
2.4.1	Transmitting Side	70
2.4.2	Receiving Side	71
2.5	Overlay Processors	74
2.5.1	Regeneration	76
2.5.2	Wavelength Interchange	76
2.6	Logical Network Overlays	77
2.6.1	SONET Networks	79
2.6.2	ATM Networks	81

2.6.3	IP Networks	83
2.6.4	MPLS and Its Extensions	84
2.7	Summary	85
2.8	Problems	87
3	Network Connections	91
3.1	Connection Management and Control	96
3.1.1	Optical Connections	100
3.1.2	Logical Connections	100
3.2	Static Networks	102
3.2.1	Point-to-Point and Multipoint Connections	104
3.2.2	Packet Switching in the Optical Layer: The MAC Sublayer	111
3.2.3	Additional Comments on Broadcast-and-Select	121
3.3	Wavelength-Routed Networks	122
3.3.1	Routing and Channel Assignment	124
3.3.2	Routing and Channel Assignment Examples	128
3.4	Linear Lightwave Networks: Waveband Routing	133
3.4.1	Routing and Channel Assignment	135
3.4.2	Multipoint Subnets in LLNs	140
3.4.3	A Seven-Station Example	143
3.5	Logically-Routed Networks	151
3.5.1	Point-to-Point Logical Topologies	153
3.5.2	Multipoint Logical Topologies: Hypernets	156
3.6	Summary	162
3.7	Problems	163
4	Enabling Technology	165
4.1	Evolution of Transmission and Switching Technology	166
4.2	Overview of the Optical Connection	167
4.3	Optical Fibers	168
4.3.1	Principles of Guided-Wave Propagation	168
4.3.2	Optical Fiber Technology: Transmission Impairments	174
4.3.3	Solitons	187
4.3.4	Photonic Crystal Fibers	188
4.4	Amplifiers	190
4.4.1	Erbium-Doped Fiber Amplifiers	191
4.4.2	Raman Amplifiers	198
4.4.3	Semiconductor Optical Amplifiers	201
4.4.4	Amplification Trends in Metro Optical Networks: Amplets	204
4.5	Optical Transmitters	205
4.5.1	Lasers	205
4.5.2	Vertical Cavity Surface Emitting Lasers	211
4.5.3	Modulation Technology	212

4.6	Optical Receivers in Intensity-Modulated Direct-Detection Systems	217
4.6.1	Photodetectors	217
4.6.2	Front-End Amplifier: Signal-to-Noise Ratio	219
4.6.3	Digital Signal Detection: Noise, Interference, and Bit Error Rate	221
4.6.4	Analog Systems: Carrier-to-Noise Ratio	227
4.7	The End-to-End Transmission Channel	228
4.7.1	Modulation Formats	229
4.7.2	Forward Error Correction	231
4.7.3	Equalization	233
4.8	Coherent Optical Systems	234
4.9	Performance Impairments in a Network Environment	235
4.9.1	Cross-Talk	235
4.9.2	Signal Power Divergence	239
4.9.3	Chirp-Induced Penalty	240
4.9.4	Optical Filter Concatenation: Distortion-Induced Penalty	240
4.9.5	Polarization Mode Dispersion Impact on System Performance	241
4.10	Optical and Photonic Device Technology	241
4.10.1	Couplers and Switches	242
4.10.2	Reciprocity	255
4.10.3	Nonreciprocal Devices	257
4.10.4	Optical Filtering Technology	257
4.10.5	Multiwavelength Switch Technology	266
4.11	Wavelength Conversion and Signal Regeneration	274
4.11.1	All-Optical Wavelength Conversion	275
4.11.2	Opaque Wavelength Conversion and Signal Regeneration	278
4.12	Optical Switch Architectures	281
4.12.1	Space Switches	281
4.12.2	Wavelength-Selective Switches	288
4.13	Performance Evaluation: Methodology and Case Studies	297
4.13.1	Physical-Layer Simulation: Three-Step Approach	298
4.13.2	WDM Network Simulation Case Studies	301
4.14	Problems	311

5	Static Multipoint Networks	324
5.1	Shared Media: The Broadcast Star	324
5.2	Representative Multiplexing and Multiple-Access Schemes	327
5.2.1	Time-Wavelength-Division Multiplexing/Multiple Access	328
5.2.2	Subcarriers	336
5.2.3	Code Division Multiple Access	352

5.3	Traffic Constraints in Shared-Channel Networks	367
5.3.1	Balanced Traffic	370
5.3.2	Unbalanced Traffic	370
5.4	Capacity Allocation for Dedicated Connections	371
5.4.1	Fixed-Frame Scheduling for Stream Traffic	371
5.4.2	Fixed-Frame Scheduling for Packet Traffic	383
5.5	Demand-Assigned Connections	389
5.5.1	Blocking Calculations in WDMA Networks	390
5.5.2	Blocking in Combined Time-Wavelength-Division Networks	395
5.6	Packet Switching in the Optical Layer	399
5.6.1	Uncontrolled Scheduling: Random Access	401
5.6.2	Scheduling with Loss	403
5.6.3	Lossless Scheduling: Reservations	405
5.6.4	Perfect Scheduling	407
5.6.5	Dynamic versus Fixed Capacity Allocation	408
5.7	The Passive Optical Network	409
5.7.1	ATM and Fixed-Frame PONs	412
5.7.2	Ethernet-Based PONs	414
5.7.3	WDM PONs	416
5.7.4	Optical-Wireless Access	420
5.7.5	Recent Trends	422
5.8	Summary	424
5.9	Problems	425
6	Wavelength/Waveband-Routed Networks	432
6.1	Introduction	432
6.2	Physical Topologies	434
6.3	Wavelength-Routed Networks: Static Routing and Channel Assignment	442
6.3.1	Flow Bounds: Matching the Physical and Logical Topologies	444
6.3.2	Nonblocking Stations	448
6.3.3	RCA as a Graph Coloring Problem	449
6.3.4	Rings	452
6.3.5	Ring Decomposition of General Mesh Networks	458
6.3.6	Multistar Wavelength-Routed Networks	462
6.3.7	RCA as an Optimization Problem	464
6.3.8	Heuristics for Static RCA	474
6.4	Wavelength-Routed Networks: Dynamic Routing and Channel Assignment	484
6.4.1	Some Basic Routing and Channel Assignment Algorithms	484

6.4.2	Case Study: Bidirectional Rings	491
6.4.3	Performance of Dynamic Routing Rules on Meshes	494
6.4.4	Case Study: An Interconnected Ring	495
6.4.5	Routing Multicast Connections in WRNs	497
6.5	Linear Lightwave Networks: Static Routing Rules	507
6.5.1	Routing of Optical Paths	509
6.5.2	Optical Connections: λ -Channel Assignment	516
6.5.3	Significance of Nonblocking Access Stations in LLNs	518
6.5.4	Local Access to LLNs	519
6.5.5	Routing Waveband and Channel Assignment on the Petersen Network	521
6.5.6	Channel Assignment	528
6.5.7	Multistar Linear Lightwave Networks	540
6.6	Linear Lightwave Networks: Dynamic Routing Rules	544
6.6.1	Point-to-Point Connections	544
6.6.2	Routing Multicast Connections in LLNs	558
6.7	Problems	568
7	Logically-Routed Networks	576
7.1	Introduction: Why Logically-Routed Networks?	576
7.1.1	Multitier Networks: Grooming	581
7.2	Point-to-Point Logical Topologies: Multihop Networks	585
7.2.1	ShuffleNets	587
7.2.2	Families of Dense Logical Topologies	589
7.3	Multihop Network Design	591
7.3.1	Logical-Layer Design	591
7.3.2	Physical-Layer Design	594
7.3.3	Traffic Grooming in Point-to-Point Logical Topologies	597
7.4	Multipoint Logical Topologies: Hypernets	607
7.4.1	Capacity of a Multipoint Subnet	611
7.4.2	Families of Dense Hypernets	613
7.4.3	Kautz Hypernets	615
7.4.4	Hypernet versus Multihop	628
7.4.5	Multicast Virtual Connections	631
7.5	Hypernet Design	632
7.5.1	Logical-Layer Design	632
7.5.2	Physical-Layer Design	634
7.5.3	Traffic Grooming in Multipoint Logical Topologies	637
7.5.4	Multistar Realizations	639
7.6	Summary	641
7.7	Problems	642

8	Survivability: Protection and Restoration	647
8.1	Objectives of Protection and Restoration	648
8.2	Current Fault Protection and Restoration Techniques in the Logical Layer	650
8.2.1	Point-to-Point Systems	650
8.2.2	SONET Self-Healing Rings	654
8.2.3	SONET Self-Healing Ring Interconnection Techniques	657
8.2.4	Architectures with Arbitrary Mesh Topologies	663
8.3	Optical-Layer Protection: Point-to-Point and Ring Architectures	669
8.3.1	Point-to-Point Systems	669
8.3.2	Self-Healing Optical Rings	672
8.4	Optical-Layer Protection: Mesh Architectures	677
8.4.1	Shared Optical Layer Line-Based Protection	679
8.4.2	Optical Path-Based Protection	692
8.4.3	Segment Protection	700
8.4.4	Survivability Techniques for Multicast Connections	702
8.5	Summary	703
8.6	Problems	706
9	Optical Control Plane	714
9.1	Introduction to the Optical Control Plane	716
9.1.1	Control-Plane Architecture	719
9.1.2	Control-Plane Interfaces	719
9.1.3	Control-Plane Functions	721
9.2	Overview of Multiprotocol Label Switching	722
9.2.1	Packet Transport through an MPLS Network	722
9.2.2	MPLS Protocol Stack	727
9.2.3	MPLS Applications	728
9.3	Overview of Generalized Multiprotocol Label Switching	729
9.3.1	Link Management in GMPLS	731
9.3.2	Routing in GMPLS	734
9.3.3	Signaling in GMPLS	742
9.4	Conclusions	751
10	Optical Packet-Switched Networks	756
10.1	Optical Packet-Switched Network Architectures	758
10.1.1	Unbuffered Networks	759
10.1.2	Deflection Routing	764
10.1.3	Performance Analysis of Deflection Routing	766
10.1.4	Buffering: Time Domain Contention Resolution	770
10.1.5	Buffering and Wavelength Conversion: Time/Wavelength Domain Contention Resolution	778

10.1.6	Comparison of Contention Resolution Techniques for Asynchronous OPS Networks	782
10.1.7	Hybrid Electronic and Optical Buffering	784
10.2	OPS Enabling Technologies	787
10.2.1	Packet Synchronization	788
10.2.2	All-Optical 2R or 3R Regeneration	788
10.2.3	Optical Switching	788
10.2.4	Wavelength Conversion	789
10.2.5	Optical Header Processing	789
10.2.6	Optical Buffering	789
10.3	OPS Network Testbed Implementations	791
10.3.1	CORD Testbed	791
10.3.2	KEOPS Testbed	793
10.3.3	WASPNET Testbed	796
10.4	Optical Burst Switching	798
10.4.1	Just Enough Time Protocol	801
10.4.2	Just In Time Protocol	803
10.4.3	Contention Resolution in OBS Networks	806
10.5	Optical Label Switching	808
10.5.1	All-Optical Label Swapping	809
10.5.2	Contention Resolution Techniques	811
10.5.3	OLS Network Implementations	811
10.6	Conclusions	820
10.7	Problems	822

11**Current Trends in Multiwavelength Optical Networking****828**

11.1	Business Drivers and Economics	828
11.1.1	Cost Issues for WDM Point-to-Point Systems	831
11.1.2	Cost Issues for WDM Rings	832
11.1.3	Cost Issues for WDM Cross-Connect Networks	833
11.1.4	Open versus Closed WDM Installations	835
11.2	Multiwavelength Optical Network Testbeds	838
11.2.1	Optical Networks Technology Consortium	838
11.2.2	All-Optical Network Consortium	839
11.2.3	European Multiwavelength Optical Network Trials	839
11.2.4	Multiwavelength Optical Network	840
11.2.5	National Transparent Optical Networks Consortium	840
11.2.6	The Importance of the Testbeds in Driving the Telecommunications Infrastructure	840
11.3	Metropolitan Area Networks	841
11.3.1	Metro Network Unique Characteristics	841
11.3.2	Defining the Metropolitan Networking Domain	842

11.3.3	Metro Network Evolution	844
11.3.4	Metro Networking State of the Art	847
11.4	Long-Haul and Ultra Long-Haul Networks	854
11.4.1	Current Considerations in Wide Area Network Architectures	854
11.4.2	Some Recent Commercial Network Deployments	856
11.5	New Applications and Services	858
11.5.1	Wavelength-on-Demand	858
11.5.2	Virtual Private Optical Networks	858
11.5.3	Bandwidth Trading	859
11.6	Conclusions	861
A	Graph Theory	869
A.1	Graphs	869
A.1.1	Cycle Double Covers	872
A.1.2	Eulerian Graphs	872
A.1.3	Planar Graphs	873
A.1.4	Matchings in Graphs	873
A.1.5	Graph Coloring	874
A.1.6	Digraphs	875
A.1.7	Moore Bounds	875
A.1.8	Max Flow–Min Cut	876
A.2	Hypergraphs	877
A.2.1	Undirected Hypergraphs	877
A.2.2	Directed Hypergraphs	878
B	Fixed Scheduling Algorithm	879
B.1	Column/Row–Expansion Algorithm	880
B.2	Decomposition into Permutation Matrices	883
B.3	Column/Row–Compression Algorithm	883
C	Markov Chains and Queues	884
C.1	Random Processes	884
C.2	Markov Processes	885
C.3	Queues	887
C.3.1	The $M M 1$ Queue	888
C.3.2	The $M G 1$ Queue	888
C.3.3	Little’s Formula	889

D	A Limiting-Cut Heuristic	890
	D.1 The Multicommodity Flow Problem and Limiting Cuts	890
	D.2 A Heuristic	891
	D.2.1 Swap (X, Y)	891
	D.2.2 Limcut	892
E	An Algorithm for Minimum-Interference Routing in Linear Lightwave Networks	893
	E.1 The Image Network	893
	E.2 The Min-Int Algorithm	894
	E.3 Minimum Interference	895
F	Synopsis of the SONET Standard	896
G	A Looping Algorithm	900
	Acronyms	903
	<i>Index</i>	915
