Taylor & Francis Group

A TAYLOR & FRANCIS BOOK

Contents

I	Quantum chromodynamics	1
1	Canonical quantization	3
1.1	Fundamental relations of chromodynamics	3
1.2	Gauge invariance in QCD	8
1.3	Quantization of the free gluon field	12
1.4	<i>Feynman rules in QCD with a covariant gauge</i>	14
2	Formalism of functional integration	21
2.1	Functional integral in quantum mechanics	21
2.2	Boson fields quantization by means of the functional integrals method	28
2.3	Fermion fields quantization by means of the functional integrals method	33
2.4	Functional formulation of QCD	40
3	Renormalization and unitarity	49
3.1	Primitive divergent diagrams	49
3.2	Slavnov–Taylor identities	51
3.3	Ghosts and S -matrix unitarity	55
3.4	Renormalization of one-loop diagrams	60
4	Asymptotical freedom	77
4.1	Callan–Symanzik equation	77
4.2	Evolution of the effective coupling constant in QCD	83
5	Chiral symmetries	91
5.1	Currents algebra	91
5.2	Weak and electromagnetic currents of hadrons	95
5.3	Adler’s sum rules for neutrino reactions	101
5.4	Goldstone theorem	106
5.5	Hypothesis of the partially conserved axial current	115
5.6	$U(1)$ -problem	119
6	Anomalies	121
6.1	Adler–Bell–Jackiw anomaly (perturbative approach)	121
6.2	Adler–Bell–Jackiw anomaly (nonperturbative approach)	129
6.3	$\pi^0 \rightarrow \gamma\gamma$ decay	132
6.4	Chiral anomalies and chiral gauge theories	134
6.5	Anomalous breaking of scale invariance	138
7	Hard processes in QCD	141
7.1	e^-e^+ annihilation into hadrons	141
7.2	<i>Deep inelastic scattering of leptons by a proton</i>	148
7.3	Parton distribution functions	154

7.4	Quark-gluon dynamics	162
7.5	Scaling violation. Altarelli–Parisi equation	172
7.6	Fragmentation functions	181
7.7	Drell–Yan process	185
7.8	Gauge bosons production at hadron collisions	191
7.9	Higgs bosons production	207
8	Lattice QCD	219
8.1	Lattice approach	219
8.2	Scalar field	221
8.3	Fermion fields	226
8.4	Geometric interpretation of gauge invariance	229
8.5	QCD action	233
8.6	Confinement	240
8.7	Hadron masses	246
9	Quark-gluon plasma	253
9.1	Aggregate states of matter	253
9.2	Looking for QGP	255
9.3	QGP within holographic duality	266
9.4	Resume	270
10	QCD vacuum	273
10.1	Kinks and breathers	273
10.2	Topology and vacuum in gauge theory	277
10.3	Vortices and monopoles	283
10.4	Instantons	290
10.5	Instanton physics	302
11	QCD experimental status	309
	References	315
II	Electroweak interactions	323
12	Glashow–Weinberg–Salam theory	325
12.1	Choice of gauge group	325
12.2	Lagrangian in generalized renormalizable gauge	328
12.3	Cabibbo–Kobayashi–Maskawa matrix	335
12.4	Four-fermion invariants and Fierz identities	339
12.5	Muon decays	344
12.6	$(g - 2)_\mu$ anomaly	359
12.7	Effects of the interference of weak and electromagnetic interactions	367
12.8	Neutrino-electron scattering	373
12.9	Neutrino-nucleon scattering	379
13	Physics beyond the standard model	383
13.1	Models, models...	383
13.2	Multipole moments of gauge bosons	389
13.3	Left-right model	396
13.4	Left-right model in the making	410

Appendix: Feynman rules for the GWS model	431
References	439
III Neutrino physics	443
14 Neutrino properties	445
14.1 Neutrino mass in models with the $SU(2)_L \times U(1)_Y$ gauge group	445
14.2 Multipole moments of neutrinos	454
15 Neutrino oscillation in a vacuum	461
15.1 Description in the formalism of de Broglie's waves	461
15.2 Oscillations and the uncertainty relation	465
15.3 Wave packet treatment of neutrino oscillations	467
15.4 Evolution equation for the neutrino	469
16 Neutrino oscillation in matter	473
16.1 Neutrino motion in condensate matter	473
16.2 Adiabatic approximation	479
16.3 Nonadiabatic effects	482
16.4 Neutrino oscillations in the magnetic field	488
16.5 Neutrino oscillations in the left-right model	489
17 Solar neutrinos	497
17.1 Some information about Sun structure	497
17.2 Sources of solar neutrinos	500
17.3 Detection of solar neutrinos	502
17.4 Analysis of neutrino observation data	506
17.5 Neutrino propagation through the Earth	511
18 Atmospheric neutrinos	515
18.1 Cosmic rays	515
18.2 Atmospheric neutrino production	517
18.3 Atmospheric neutrino detection	519
19 Results and perspectives	523
Instead of an epilogue	543
References	547
Index	551
