Part I: Introducing SolidWorks Basics **1**

Chapter 1: Introducing SolidWorks	3
Installing SolidWorks for the First Time	3
Starting SolidWorks for the First Time	5
Examining the SolidWorks license agreement	5
Viewing the Welcome to SolidWorks screen	5
Using Quick Tips	6
Creating a new document.....	7
Exploring SolidWorks documentation	8
Accessing tutorials.....	9
Keeping up with what's new	9
Moving from 2D to 3D	9
Exploring SolidWorks Help	9
Checking out the Tip of the Day.....	10
Switching from hardcopy documentation.....	10
Identifying SolidWorks Documents	10
Saving your setup.....	11
Using templates.....	12
Having multiple document templates available.....	12
Sharing templates	16
Understanding Feature-Based Modeling.....	16
Understanding History-Based Modeling.....	18
Sketching with Parametrics	21
Understanding Design Intent	25
Editing Design Intent	26
Choosing sketch relations.....	26
Selecting display/delete relations	26
Using suppressed sketch relations	27
Working with Associativity	27
Tutorial: Creating a Part Template	28
Tutorial: Using Parametrics in Sketches	30
Summary	35

Chapter 2: Navigating the SolidWorks Interface.	37
Identifying Elements of the SolidWorks Interface.....	39
Using the CommandManager and toolbars.....	39
Exploring the CommandManager.....	39
Using toolbars.....	43
Using Tool tips.....	48
Managing toolbars.....	48
Customizing your workflow.....	51
Controlling menus.....	53
Changing cursors.....	55
Working with models in the FeatureManager and PropertyManager windows.....	55
Using the FeatureManager.....	55
Using the PropertyManager.....	57
Introducing the DisplayManager.....	58
Getting around the Task pane.....	59
Getting familiar with the Status bar.....	60
Assigning tags.....	60
Making use of Quick Tips.....	60
Using SolidWorks Search.....	61
Searching for files.....	62
Searching for help.....	63
Using the 2D Command Line Emulator.....	63
Making the Interface Work for You.....	64
Customizing colors.....	64
Exploring default selection colors.....	65
Selecting background options wisely.....	65
Customizing strategies.....	66
Considering hotkey approaches.....	67
Organizing hotkeys.....	67
Using mouse gestures.....	68
Using the keyboard.....	69
Minimizing icons.....	70
Contemplating device approaches.....	70
Using touch and multi-touch support.....	70
Accessing macros.....	71
Saving custom interface settings.....	72
Working with multiple document windows.....	73
Managing windows.....	73
Changing windows.....	75
Getting to Know the Interface.....	76
Copying the existing settings.....	76
Applying default settings to interface items.....	76
Customizing the CommandManager.....	77
Customizing menus.....	80

Changing interface colors	81
Adding hotkeys	81
Combining macros with hotkeys	82
Summary	83
Chapter 3: Working with Sketches	85
Opening a Sketch	86
Identifying Sketch Entities	86
Using the Sketch toolbar	87
Using the Dimensions/Relations toolbar	109
Inferencing in Sketch	111
Exploring Sketch Settings	113
Using Sketch Blocks	114
Working with Reference Geometry	115
Creating planes	116
Working with axes	117
Using Coordinate Systems	118
Using points as reference geometry	119
Tutorial: Learning to Use Sketch Relations	120
Tutorial: Using Blocks and Belts	122
Tutorial: Creating Reference Geometry	125
Summary	129
Chapter 4: Creating Simple Parts and Drawings	131
Discovering Design Intent	131
Using symmetry	132
Determining primary or functional features	132
Predicting change	132
Determining the manufacturing method	132
Identifying secondary operations	133
Creating multiple versions	133
Creating a Simple Part	133
Deciding where to start	134
Building in symmetry	136
Making it solid	137
Using Instant 3D	143
Making the first extrude feature	144
Controlling relative size or direct dimensions	146
Creating the offset	146
Using sketch techniques	147
Using the Hole Wizard	149
Cutting a slot	151
Creating fillets and chamfers	153
Tutorial: Making a Simple Drawing	156
Summary	161

Contents

Chapter 5: Using Visualization Techniques 163

Manipulating the View	163
Using arrow keys.....	164
Using the middle mouse button	164
Using mouse gestures.....	165
Using the View toolbar.....	165
Adding scrollbars and splitters	166
Using the Magnifying Glass	167
Clicking the Triad axes.....	167
Using the View Tools	168
Zebra Stripes	171
View Orientation.....	172
The Standard Views toolbar	173
Annotation views	174
Using the DisplayManager	174
Applying appearances	175
Differentiating appearances and materials.....	176
Understanding appearances.....	177
Understanding overrides	178
Using appearances with Display States	179
Removing appearances	180
Using decals.....	181
Using scenes, lights, and cameras	183
Controlling scenes.....	183
Turning on the lights.....	185
Working with cameras	186
Using RealView	189
Exploring the Display Pane	190
Applying Color Automatically to Features.....	190
Using Edge Display Settings.....	191
Tutorial: Applying Visualization Techniques.....	191
Summary	196

Part II: Building Intelligence into Your Parts 197

Chapter 6: Getting More from Your Sketches 199

Editing Sketch Relations	199
Using Display/Delete Relations.....	200
Using SketchXpert.....	202
Working with Sketch Entities	202
Moving entities.....	202
Rotating entities	203
Copying entities	204

Scaling entities	204
Modifying sketch	204
Copying and pasting sketch entities	205
Dragging entities	206
Creating a derived sketch	206
Using Sketch Pictures.....	206
Using three views	207
Compensating for perspective	208
Estimating sharp edges.....	208
Using Auto Trace	209
Using Sketch Text	210
Using Colors and Line Styles with Sketches	211
Working in Color Display mode.....	211
Assigning line color	211
Using the Edit Sketch Or Curve Color tool.....	211
Assigning line thickness and line style	212
Using Other Sketch Tools	212
Working with RapidSketch	212
Adding Sensors	213
Using metadata for sketches	214
Creating construction geometry	214
Sketching in 3D	214
Navigating in space	215
Exploring sketch relations in 3D sketches	216
Using planes in space	217
Using planar path segments.....	218
Defining dimensions	218
Using 3D sketch summary	219
Tutorial: Editing and Copying.....	219
Tutorial: Controlling Pictures, Text, Colors, and Styles	223
Tutorial: Using Metadata.....	226
Tutorial: Sketching Calculator.....	227
Summary	230

Chapter 7: Modeling with Primary Features 231

Identifying When to Use Which Tool.....	231
Using the Extrude feature.....	232
Creating a solid feature.....	232
Creating a thin feature	232
Exploring sketch types	233
Understanding the workflow	237
Understanding Instant 3D	237
Creating extrudes with Instant 3D.....	237
Editing geometry with Instant 3D.....	239

Contents

Working with the Revolve feature	240
Understanding end conditions.....	240
Workflow	241
Using contour selection	241
Introducing loft and boundary	241
Comparing the Loft and Boundary features	243
Using entities in a loft.....	244
Comparing lofts and splines	244
Understanding the need for surfaces.....	245
Exploring loft end constraints.....	246
Displaying isoparameter U-V lines	247
Using guide curves	247
Using centerline lofts.....	249
Using the SelectionManager.....	249
Choosing loft options	250
Workflow	251
Controlling Sweep features.....	251
Using a simple sweep	251
Using a sweep with guide curves	252
Using a Pierce relation	252
Using a cut sweep with a solid profile.....	254
Workflow	255
Understanding Fillet Types	256
Creating a constant radius fillet	257
Selecting entities to fillet	257
Using tangent propagation.....	259
Dealing with a large number of fillets	260
Making multiple fillet sizes	262
Rounding corners	263
Using the Keep edge/Keep surface toggle.....	263
Using the Keep Feature option	264
Creating variable radius fillets	265
Applying the values.....	265
Using straight versus smooth transitions.....	267
Recognizing other uses for the variable radius fillet	268
Using face fillets	268
Using continuous curvature face fillets	270
Using face fillets with the Help Point.....	271
Applying a single hold line fillet	273
Using a double hold line fillet.....	274
Using a constant width fillet	276
Applying a full round fillet	276
Building a setback fillet	277
Using Chamfers	280
Tutorial: Bracket Casting.....	281
Summary	286

Chapter 8: Selecting Secondary Features 287

Creating Curve Features..... 287

 Working with Helix curve features..... 288

 Using the Tapered Helix panel..... 288

 Using the Variable Pitch helix..... 289

 Workflow..... 290

 Using the Spiral..... 290

 Creating projected curves..... 290

 Using Sketch On Faces..... 290

 Using Sketch Onto Sketch..... 291

 Using the Curve Through XYZ Points feature..... 292

 Using the Curve Through Reference Points feature..... 293

 Putting together a composite curve..... 293

 Using Split lines..... 294

 Using the equation driven curve..... 294

Selecting a Specialty Feature..... 295

 Using Scale..... 295

 Using the Dome feature..... 296

 Using the Wrap feature..... 298

 Using Scribe..... 298

 Using Emboss..... 299

 Using Deboss..... 300

 Using the Flex feature..... 301

 Applying the Deform feature..... 303

 Looking at Point deform..... 304

 Looking at Curve to curve deform..... 305

 Looking at Surface push deform..... 305

 Using the Indent feature..... 305

Tutorial: Creating a Wire-Formed Part..... 307

Summary..... 310

Chapter 9: Patterning and Mirroring 311

Patterning in a Sketch..... 311

 Debunking more sketch myths..... 313

 Patterning a sketch..... 314

 Using the Linear Sketch Pattern..... 315

 Using the Circular Sketch Pattern..... 315

Mirroring in a Sketch..... 316

 Using Mirror Entities..... 316

 Using Dynamic Mirror..... 318

 Using Symmetry sketch relation..... 318

 Using Mirroring in 3D sketches..... 319

Exploring the Geometry Pattern Option..... 319

Patterning Bodies..... 320

Patterning Faces..... 321

Patterning Fillets..... 323

Contents

Understanding Pattern Types	323
Using the Linear Pattern	323
Using the Circular Pattern	325
Using the Curve Driven Pattern	326
Using the Sketch Driven Pattern	329
Using the Table Driven Pattern	330
Using the Fill Pattern	331
Using Cosmetic Patterns to Create an Appearance	332
Mirroring 3D Solids	333
Mirroring bodies	333
Mirroring features	334
Mirroring entire parts	334
Tutorial: Creating a Circular Pattern	336
Tutorial: Mirroring Features	337
Tutorial: Applying a Cosmetic Pattern	339
Summary	341
Chapter 10: Using Equations	343
Understanding Equations	343
Creating equations	344
Naming dimensions	345
Building the equation	346
Using comments	348
Using driven dimensions	349
Using equation tricks	351
IIF	351
SWITCH	352
Using Link Values	352
Using Global Variables	354
Using Expressions	356
Controlling Suppression States of Features	356
Linking to External Equations	357
Tutorial: Using Equations	358
Summary	359
Chapter 11: Working with Part Configurations	361
Controlling Items with Configurations	362
Finding configurations	362
Deleting configs	363
Sorting configs	364
Activating configurations	365
Creating configurations	367
Creating a new config	367
Using Configuration properties and options	367
Using Advanced options	368

Using the Modify dialog box.....	369
Using Negative dimensions.....	369
Using the Modify Configurations dialog box	370
Using Table Views	371
Adding custom properties with the Modify Configurations dialog box	372
Using custom property managers	372
Using derived configurations.....	374
Understanding how file size affects speed.....	375
Controlling dimensions.....	375
Controlling suppression	376
Controlling custom properties.....	378
Controlling sketch relations	379
Controlling sketch planes.....	379
Controlling configurations of inserted parts	380
Using Library features	381
Identifying unconfigurable items.....	382
Using Design Tables.....	382
Identifying what can be driven by a design table	383
Creating a Simple Design Table.....	384
Editing design table settings.....	389
Linked design table	390
Edit control	390
Options	390
Editing the design table.....	391
Using the Configuration Publisher	391
Tutorial: Working with Configurations and Design Tables.....	393
Summary	398
Chapter 12: Editing, Evaluating, and Troubleshooting	399
Using Rollback.....	399
Using the Rollback bar	400
Understanding consumed features.....	400
Examining the parent-child relationship.....	401
Rolling back features with multiple parents	402
Viewing consumed features in their original order.....	403
Using other Rollback techniques	404
Reordering Features.....	404
Reordering Folders.....	406
Using the Flyout and Detachable FeatureManagers	406
Summarizing Part Modeling Best Practice	408
Using Evaluation Techniques.....	411
Using Verification on rebuild	412
Using the Check tool.....	412
Evaluating geometry with reflective techniques	413
Using Zebra Stripes	413
Using RealView	415

Using Curvature display	415
Using Deviation Analysis	415
Using the Tangent Edges as Phantom setting	416
Using Geometry Analysis	417
Using Feature Statistics	418
Using the Curvature Comb	418
Using DFMXpress to catch manufacturability problems	419
Analyzing with SimulationXpress	420
Welcome to SolidWorks SimulationXpress	421
Applying Fixtures	421
Applying Loads	422
Selecting a material	423
Running the analysis	423
Visualizing the results	423
Optimizing the design	425
Troubleshooting Errors	426
Interpreting rebuild errors	426
Using SolidWorks RX and Performance Benchmark	429
Using SolidWorks RX	429
Using Performance Benchmark	432
Tutorial: Making Use of Editing and Evaluation Techniques	435
Summary	442

Chapter 13: Using Hole Wizard and Library Features 443

Using the Hole Wizard	443
Defining the anatomy of a Hole Wizard hole	444
Using the placement sketch	445
Using the hole sketch	445
Using 2D versus 3D placement sketches	445
Understanding the advantages and limitations of the 2D sketch	446
Understanding the advantages and limitations of the 3D sketch	446
Making and using favorites	449
Creating a Hole Wizard Favorite	450
Storing custom holes	450
Administering Hole Wizard Favorites	450
Confronting favorites quirks	450
Using the Hole Series	451
Using Library Features	451
Getting started with library features	452
Applying the library feature interface	452
Using the Task Pane	452
Using Design Library	453
Exploring other Design Library functions	457
Storing annotations	457
Location of the Design Library folder	457
Storing library parts	458

Using sheet metal forming tools.....	458
Using assemblies	458
Using routing	459
Using Smart Components.....	459
Creating Library Features.....	459
Creating a library feature.....	460
Understanding library limitations.....	460
Creating a new library feature.....	460
Saving the library feature.....	462
Changing the display of the library feature thumbnail.....	463
Creating a library feature from an existing part.....	464
Adding folders to the library	466
Locating and Internal dimensions	466
Understanding Dissection	467
Tutorial: Working with Library Features.....	467
Summary	473

Part III: Creating Part Drawings 475

Chapter 14: Automating Drawings: The Basics 477

Comparing Templates and Formats	477
Changing existing templates.....	478
Maintaining different templates or formats.....	478
Creating custom drafting standards.....	479
Creating Drawing Formats	479
Customizing an existing format.....	480
Using sample formats	480
Editing a format.....	481
Managing text.....	482
Using custom properties.....	483
Entering custom property data	483
Displaying property links	485
Displaying errors and link variables	486
Creating linked properties	486
Using the Title Block function.....	487
Creating a format from a blank screen.....	488
Creating a format from an imported DWG/DXF file	489
Saving the format	491
Using second sheet formats	492
Adding new sheets	492
Reloading formats.....	493
Creating Drawing Templates.....	493
Using Pre-defined Views in drawing templates.....	493
Aligning Pre-defined Views.....	495
Populating a drawing with Pre-defined Views.....	496

Contents

Scaling Pre-defined Views.....	496
Understanding the limitations of Pre-defined Views	496
Using styles and blocks in templates	497
Using custom properties in templates.....	498
Saving a template	499
Creating Blocks.....	499
Summary	500

Chapter 15: Working with Drawing Views 501

Creating Common View Types.....	501
Using the View palette.....	502
Using Model Views.....	503
Open documents.....	503
Thumbnail Preview	504
Start Command When Creating New Drawing option	504
Reference Configuration	504
Select Bodies.....	504
Cosmetic Thread Display.....	504
Number of Views and Orientation.....	504
Import Options Panel.....	505
Display State.....	505
Display Style.....	505
Scale.....	505
Dimension Type	506
Cosmetic Thread Display.....	506
Using the Projected View	507
Using Standard 3 View.....	507
Using Detail View.....	507
Pre-drawing a detail circle	508
Drawing a detail circle in-line.....	509
Editing a Detail View	509
Working with Section Views	510
Using a Default Section View.....	510
Using a Partial Section View	512
Using an Aligned Section View	512
Editing a Section View.....	513
Creating Other View Types.....	513
Using a Crop View	513
Using a Broken-out Section View	514
Drawing the closed loop.....	515
Selecting the depth.....	516
Editing the view	517
Using a Break View	517
Using an Auxiliary View	519

Using an Alternate Position View.....	520
Using a Pre-defined View.....	521
Using an Empty View.....	521
Using a Custom View.....	521
Using a Relative View.....	521
Using the 3D Drawing View Mode.....	522
Changing view orientation and alignment.....	523
Using Display Options in Views.....	523
Using Display States.....	524
Using Display styles.....	524
Selecting a Component Line Font.....	525
Using layers.....	525
Working with tangent edge display options.....	526
Choosing view quality settings.....	527
Distinguishing Views from Sheets.....	528
Tutorial: Working with View Types, Settings, and Options.....	528
Summary.....	534

Chapter 16: Using Annotations and Symbols 535

Using Notes.....	535
Setting up a workflow for placing notes.....	535
Making use of fonts.....	536
Using text boxes and wrapping.....	536
Using Fit Text in notes.....	537
Patterning notes.....	538
Placing notes and leaders.....	539
Adding a leader to a note.....	540
Using multiple leaders.....	540
Using jogged leaders.....	541
Adding styles.....	542
Linking notes to custom properties.....	544
Hyperlinking text.....	544
Adding notes and symbols.....	545
Using Blocks in Drawings.....	545
Inserting blocks.....	545
Creating blocks.....	547
Editing blocks.....	548
Using Symbols.....	548
Using symbols in notes and dimensions.....	549
Creating custom symbols.....	549
Using Center Marks and Centerlines.....	550
Tutorial: Using Annotations.....	551
Summary.....	553

Chapter 17: Dimensioning and Tolerancing	555
Putting Dimensions on Drawings	555
Using Insert Model Items	555
Using reference dimensions	557
Rapid Dimension	558
Reference dimensions and the DimXpert	559
Using the DimXpert	560
Annotation views	562
Driven dimension color	562
Ordinate and baseline dimensions	563
Autodimensioning	563
Reference sketches	564
Understanding dimension options	565
Dimension Text	566
Primary Value Override	566
Display Options	566
Witness/Leader Display	568
Break Lines	568
Formatting dimensions with the Dimension Palette	568
Adding Tolerances	569
Changing precision values	570
Using Geometric Tolerancing symbols	570
Using Dimension Styles	571
Aligning Dimensions and Annotations	571
Using the alignment tools	572
Inferencing alignment and grid snapping	572
Using Dimension Palette alignment options	573
Arranging dimensions automatically	574
Tutorial: Working with Dimensions and Tolerances	575
Summary	578
Chapter 18: Using Layers, Line Fonts, and Colors.	579
Controlling Layers	579
Working with layers in imported 2D data	579
Working with layers on the sheet format	581
Adding dimensions and notes to layers	581
Working with components on layers	581
Using assembly colors on drawings	582
Using assembly parts on layers	582
Controlling Line Format	583
Using the Line Format settings	584
Setting the End Cap Style	584
Setting the line thickness	585
Setting the line style	586
Changing the Color Display mode	586

Hiding and Showing Edges	586
Tutorial: Using Drawing Display Tools	586
Summary	589

Part IV: Using Advanced Techniques **591**

Chapter 19: Modeling Multi-Bodies **593**

Using Powerful Tools Effectively	593
Comparing multi-body modeling with assembly modeling	594
Using multi-body techniques appropriately	595
Understanding Multi-Body Techniques	596
Creating complex shapes across bodies	597
Using tool bodies and Boolean operations	599
Using the Indent feature	599
Using the Move/Copy Bodies and Combine features	601
Using local operations	603
Using the Flex feature	603
Using the Shell feature	603
Patterning	604
Simplifying very complex parts	606
Bridging between solids	608
Modeling for undetermined manufacturing methods	608
Creating Multi-Bodies	610
Using disjoint sketches	610
Turning off the Merge Result option	610
Applying the Feature Scope to bodies	610
Using the Rib feature	611
Using the Delete Solid/Surface feature	612
Creating multi-bodies with the Cut feature	612
Managing bodies with the Split feature	613
Splitting with a sketch	613
Splitting with a plane	614
Splitting with a surface body	614
Adding bodies using the Insert Part feature	615
Working with secondary operations	616
Starting point	616
Managing Bodies	616
Using Body folders	616
Hiding or showing bodies	619
Deleting bodies	621
Renaming bodies	621
Using Multiple Bodies with Sheet Metal, Weldments, and Molds	621
Introducing multi-body functionality in weldments	621
Introducing multi-body functionality in sheet metal	621
Introducing multi-body functionality in molds	622

Tutorials: Working with Multi-Bodies	622
Merging and local operations	622
Splitting and patterning bodies	624
Summary	626

Chapter 20: Working with Surfaces 627

Introducing Surfaces	627
Understanding Surfacing Terminology	628
Exploring the Knit function	628
Using the Trim function	628
Using the Untrim function	629
Exploring hybrid modeling	629
Understanding Non Uniform Rational B Spline	630
Using developable surfaces	631
Using ruled surfaces	631
Defining Gaussian curvature	631
Surfacing Tools	631
Classifying the Extruded Surface	631
Using Revolved Surface	633
Using Swept Surface	633
Identifying the Lofted Surface	633
Using Boundary Surface	633
Characterizing the Offset Surface	635
Using Radiate Surface	636
Knitting Surfaces	637
Using Thicken Surface	638
Using Planar Surface	639
Using Extend Surface	639
Using Trim Surface	640
Using Fill Surface	641
Using MidSurface	643
Using Replace Face	643
Using Untrim Surface	645
Using Parting Surface	645
Using Ruled Surface	645
Using Surfacing Techniques	646
Using Up To Surface/Up To Body	646
Using Cut With Surface	648
Using Replace Face	649
Using Fill Surface	649
Using a memory surface	651
Tutorial: Working with Surfaces	652
Using Cut With Surface	652
Using Offset Surface	653
Using Fill Surface blend	656
Summary	659

Part V: Working with Specialized Functionality **661**

Chapter 21: Using SolidWorks Sheet Metal Tools **663**

- Using the Base Flange Features 663
 - Using the Base Flange/Tab feature 664
 - Using the Sheet Metal feature 665
 - Gauge Table 666
 - Bend Radius 667
 - Thickness 667
 - Bend Allowance 668
 - Auto Relief 672
 - Using the Flat Pattern feature 672
 - Using the Edge Flange feature 675
 - Edit Flange Profile 676
 - Use default radius 676
 - Gap distance 676
 - Angle 677
 - Flange Length 677
 - Flange Position 677
 - Trim side bends 677
 - Curved edges 678
 - Using the Miter Flange feature 679
 - Using the Hem feature 680
 - Using the Jog feature 681
 - Fixed Face 681
 - Jog Offset 682
 - Fix projected length 682
 - Jog Position 682
 - Jog Angle 683
 - Using the Sketched Bend feature 683
 - Using the Closed Corner feature 683
 - Faces to Extend 684
 - Faces to Match 684
 - Gap 684
 - Overlap/Underlap ratio 684
 - Open bend region 685
 - Coplanar faces 685
 - Mirroring and patterning in sheet metal 686
 - Mirroring sheet metal features 687
 - Patterning sheet metal features 687
 - Forming tool feature 688
 - Creating forming tools 688
 - Forming Tool Library 689
 - Placing a forming tool 689
 - Special techniques with forming tools 690
