

The

Chlamydomonas

Sourcebook
Second Edition

*Organellar and
Metabolic Processes*

Volume 2

Edited by **David B. Stern**

Contents of Volume 2

Preface	xv
<i>Acknowledgments</i>	<i>xix</i>
List of Contributors	xxi
Conventions Used	xxv
Abbreviations	xxvii
List of Tables	xxxii
List of Figures	xxxv
Contents of Volume 1	xli
Contents of Volume 3	xliv

CHAPTER 1 Starch Metabolism 1

Steven G. Ball and Philippe Deschamps

I. Starch structure and localization in the green algae	2
II. An outline of the starch metabolism pathway: comparative biochemistry and genomics	5
III. The genetics of starch accumulation and mobilization	18
IV. Physiology of starch storage: circadian clock control, pyrenoidal starch synthesis and hydrogen production	26
V. Conclusions	30
References	33

CHAPTER 2 Glycerolipid Biosynthesis 41

Wayne R. Riekhof and Christoph Benning

I. Introduction	41
II. Fatty acid biosynthesis and desaturation	44
III. Glycerolipid biosynthesis	49
IV. Compartmentalization of lipid biosynthesis	59
V. Perspectives	60
Acknowledgments	60
References	61

CHAPTER 3 Nitrogen Assimilation and its Regulation	69
<i>Emilio Fernández, Ángel Llamas and Aurora Galván</i>	
I. Introduction	70
II. Useful nitrogen sources for <i>Chlamydomonas</i>	70
III. Ammonium assimilation	81
IV. Assimilation of nitrate and nitrite	85
V. Regulation of nitrate assimilation	97
Acknowledgments.....	99
References	100
CHAPTER 4 Amino Acid Metabolism	115
<i>Olivier Vallon and Martin H. Spalding</i>	
I. Introduction	116
II. Biosynthesis of amino acids: pathways, enzymes, localization, inhibitors, mutants	116
III. Use of exogenous amino acids	142
IV. Role of amino acids as precursor of metabolites.....	146
V. Conclusions.....	150
References	150
CHAPTER 5 Sulfur: From Acquisition to Assimilation	159
<i>David Gonzalez-Ballester and Arthur R. Grossman</i>	
I. Introduction	159
II. SO_4^{2-} acquisition and assimilation.....	160
III. S starvation responses.....	171
IV. Perspectives.....	178
Acknowledgments.....	179
References	179
CHAPTER 6 Phosphate Metabolism and Responses to Phosphorus Deficiency.....	189
<i>Jeffrey Moseley and Arthur R. Grossman</i>	
I. Introduction	190
II. Phosphorus acquisition	192
III. P storage, mobilization, and conservation.....	195
IV. Genetic control of phosphorus deprivation responses.....	198
V. P deficiency and photosynthesis.....	205
VI. Regulatory model for P deprivation responses.....	207
VII. Concluding remarks	208
Acknowledgments.....	209
References	209

CHAPTER 7	Hydrogenases, Hydrogen Production, and Anoxia.....	217
	<i>Matthew C. Posewitz, Alexandra Dubini, Jonathan E. Meuser, Michael Seibert and Maria L. Ghirardi</i>	
	I. Background.....	218
	II. Hydrogenases.....	220
	III. Hydrogen metabolism.....	229
	IV. Fermentative metabolism.....	236
	V. Genomics and systems biology.....	239
	VI. Sulfur deprivation.....	241
	VII. Outlook.....	245
	Acknowledgments.....	246
	References.....	246
CHAPTER 8	The CO₂-Concentrating Mechanism and Carbon Assimilation.....	257
	<i>Martin H. Spalding</i>	
	I. The carbon environment.....	257
	II. Metabolism of carbon assimilation.....	269
	III. Acquisition of inorganic carbon.....	278
	References.....	290
CHAPTER 9	Rubisco.....	303
	<i>Katia Wostrickoff and David B. Stern</i>	
	I. Introduction.....	303
	II. Rubisco-encoding genes and enzyme structure.....	304
	III. Site-directed mutagenesis.....	306
	IV. Rubisco activase.....	320
	V. Rubisco expression in response to physiological cues.....	321
	VI. Regulation of Rubisco LS expression.....	323
	VII. Conclusions and perspectives.....	324
	Acknowledgments.....	325
	References.....	325
CHAPTER 10	Transition Metal Nutrition: A Balance Between Deficiency and Toxicity.....	333
	<i>Marc Hanikenne, Sabeeha S. Merchant and Patrice Hamel</i>	
	I. Introduction.....	334
	II. Components of the metal homeostasis network.....	335
	III. Metal tolerance.....	354
	IV. Metal nutrition and deficiency response.....	359
	V. Conclusions and perspectives.....	376
	Acknowledgments.....	379
	References.....	379

CHAPTER 11	Thioredoxins and Related Proteins	401
	<i>Laure Michelet, Mirko Zaffagnini and Stéphane D. Lemaire</i>	
	I. Introduction	401
	II. Thioredoxins.....	403
	III. Glutaredoxins	421
	IV. Protein disulfide isomerases.....	427
	V. Conclusions.....	430
	Acknowledgments	431
	References	432
CHAPTER 12	The Mitochondrial Genome	445
	<i>Pierre Cardol and Claire Remacle</i>	
	I. Introduction	446
	II. Characteristics of the mitochondrial genome	447
	III. Mutations affecting the mitochondrial genome.....	450
	IV. Mitochondrial genome transmission.....	457
	V. Mitochondrial transformation	460
	Acknowledgments	461
	References	461
CHAPTER 13	Oxidative Phosphorylation: Building Blocks and Related Components	469
	<i>Pierre Cardol, Francisco Figueroa, Claire Remacle, Lars-Gunnar Franzén and Diego González-Halphen</i>	
	I. Introduction	470
	II. Complexes of the mitochondrial respiratory chain.....	471
	III. Import of nucleus-encoded OXPHOS proteins	487
	IV. Conclusions and perspectives.....	490
	Acknowledgments	491
	References	491
CHAPTER 14	Light-Harvesting Proteins.....	503
	<i>Jun Minagawa</i>	
	I. Introduction	504
	II. Structure and composition of the light-harvesting apparatus.....	505
	III. Light-harvesting proteins	513
	IV. LHC-like proteins.....	521
	V. Regulation of the light-harvesting complex	525
	Acknowledgments	528
	References	529

CHAPTER 15	Photosystem I	541
	<i>Kevin E. Redding</i>	
	I. Introduction	542
	II. Composition of PS I	545
	III. Energy transfer and electron transfer within PS I.....	548
	IV. Electron transfer to and from PS I	559
	V. Assembly and disassembly of PS I.....	564
	VI. Frontiers of PS I research using the <i>Chlamydomonas</i> system.....	565
	Acknowledgments	565
	References	565
CHAPTER 16	Photosystem II, a Structural Perspective	573
	<i>Zoe Gokhale and Richard T. Sayre</i>	
	I. Introduction	573
	II. Overview of the photosystem II complex.....	574
	III. Beyond the photosystem II crystal structure	594
	References	594
CHAPTER 17	The Cytochrome b_6f Complex	603
	<i>Catherine de Vitry and Richard Kuras</i>	
	I. Introduction	604
	II. Structure of the b_6f complex.....	604
	III. The b_6f complex at the crossroads of electron transport and signal transduction	611
	IV. Biogenesis of the b_6f complex.....	619
	V. Conclusion	627
	Acknowledgments	628
	References	628
CHAPTER 18	The CF_0F_1 ATP Synthase Complex of Photosynthesis	639
	<i>Giovanni Finazzi, Dominique Drapier and Fabrice Rappaport</i>	
	I. Introduction	640
	II. Composition, structure and specific features of the ATP synthase	640
	III. Mechanistic aspects of the synthesis/hydrolysis of ATP	649
	IV. Concluding remarks	661
	References	662

CHAPTER 19 Chaperones and Proteases671

Michael Schroda and Olivier Vallon

I. Introduction.....	672
II. Regulation of the heat shock response.....	673
III. Small HSPs.....	674
IV. HSP33: a redox-regulated chaperone.....	676
V. HSP60s.....	677
VI. HSP70s.....	678
VII. HSP90s.....	692
VIII. Elevated levels of sHSPs, HSP60, and HSP70 in <i>Chlamydomonas acidophila</i>	695
IX. HSP100 proteins function as chaperones and/or components of ATP-dependent proteases.....	695
X. FtsH proteases.....	699
XI. Lon.....	700
XII. DegP and C-terminal processing peptidases.....	700
XIII. N-terminal maturation of organelle-encoded proteins.....	703
XIV. Peptidases in organellar import and membrane translocation.....	704
XV. Intramembrane proteases: Site2 peptidase, PARL/rhomboid, Spp, SppA.....	706
XVI. Proteolytic processes in the organelles of <i>Chlamydomonas</i> : whodunnit?.....	709
XVII. Conclusion.....	712
References.....	712

CHAPTER 20 Biosynthesis of Chlorophylls and Hemes.....731

Samuel I. Beale

I. Introduction.....	732
II. Outline of tetrapyrrole biosynthesis.....	733
III. ALA formation from glutamate.....	733
IV. Steps common to the biosynthesis of all tetrapyrroles.....	742
V. Steps from uroporphyrinogen III to protoporphyrin IX.....	745
VI. Steps specific to chlorophyll formation.....	748
VII. Biosynthesis of chlorophyll <i>b</i>	760
VIII. Minor chlorophyll <i>a</i> derivatives in reaction centers.....	761
IX. Chlorophyll degradation and interconversion of chlorophylls <i>a</i> and <i>b</i>	761
X. The branch from uroporphyrinogen III to siroheme....	763
XI. The branch from protoporphyrin IX to hemes.....	765

	XII. Heme catabolism.....	769
	XIII. Regulation	770
	References	775
CHAPTER 21	Carotenoids	799
	<i>Martin Lohr</i>	
	I. Introduction.....	799
	II. Occurrence and analysis.....	800
	III. Biosynthesis.....	803
	IV. Localization and functional significance.....	808
	V. Carotenoids as biosynthetic precursors	810
	VI. Outlook	810
	Acknowledgments	811
	References	811
CHAPTER 22	State Transitions	819
	<i>Jean-David Rochaix</i>	
	I. Introduction.....	820
	II. What are state transitions?	820
	III. Phosphorylation and mobility of LHCII polypeptides	822
	IV. Regulation of phosphorylation.....	828
	V. Thylakoid protein kinases	830
	VI. Maintenance of ATP levels through state transitions	836
	VII. Genetic approaches	837
	VIII. Role of state transitions	839
	IX. Conclusions and prospects	839
	Acknowledgments	840
	References	840
CHAPTER 23	Photoprotection and High Light Responses	847
	<i>Krishna K. Niyogi</i>	
	I. Introduction.....	847
	II. High light-induced damage and repair	849
	III. Regulation of photosynthetic light harvesting by nonphotochemical quenching.....	853
	IV. Regulation of gene expression and acclimation to high light	856
	Acknowledgments	861
	References	862
CHAPTER 24	The Chloroplast Genome	871
	<i>David C. Higgs</i>	
	I. Introduction.....	871
	II. Genome structure and sequence	872

III. Gene content.....	878
IV. DNA replication.....	880
V. Genome evolution.....	882
VI. Conclusions and perspectives.....	885
References.....	886
CHAPTER 25 Chloroplast Transcription.....	893
<i>Uwe Klein</i>	
I. Introduction.....	893
II. Transcription units: single genes and gene clusters.....	894
III. The transcription machinery.....	895
IV. Initiation and termination of transcription.....	902
V. Regulation of chloroplast transcription.....	907
VI. Perspectives.....	909
Acknowledgments.....	909
References.....	909
CHAPTER 26 Chloroplast RNA Splicing.....	915
<i>Michel Goldschmidt-Clermont</i>	
I. Introduction.....	915
II. Group I introns.....	916
III. Group II intron splicing.....	921
IV. Are splicing and its regulation essential?.....	928
V. Conclusions.....	929
Acknowledgments.....	930
References.....	930
CHAPTER 27 Chloroplast RNA Processing and Stability.....	937
<i>David L. Herrin</i>	
I. Chloroplast RNA processing.....	938
II. Chloroplast RNA stability and degradation.....	949
III. Conclusions and perspectives.....	958
Acknowledgments.....	959
References.....	959
CHAPTER 28 Protein Synthesis in the Chloroplast.....	967
<i>William Zerges and Charles Hauser</i>	
I. Introduction.....	968
II. Methodologies used in studies of chloroplast translation.....	969
III. Chloroplast ribosomes.....	971
IV. General chloroplast translation factors.....	984
V. The regulation of translation by light.....	988
VI. Genetic approaches that have identified chloroplast translation factors.....	995

VII. <i>Cis</i> -acting translation elements in chloroplast 5' UTRs	1000
VIII. mRNA termini may interact during translation	1005
IX. The localization of protein synthesis	1006
X. Translation and protein targeting	1008
XI. Future perspectives	1008
Acknowledgments	1009
References	1009
CHAPTER 29 The CES Process	1027
<i>Yves Choquet and Francis-André Wollman</i>	
I. Introduction	1028
II. Assembly of multisubunit photosynthetic protein complexes	1029
III. CES, a major control step in the biogenesis of photosynthetic proteins	1033
IV. CES cascades and assembly of multimeric protein complexes	1040
V. Is CES central to organelle protein expression?	1044
VI. CES and the nuclear control of chloroplast gene expression	1049
VII. Conclusion	1053
Acknowledgments	1053
References	1053
Index	1065
