

Edited by Andreas Öchsner
and Waqar Ahmed

 WILEY-VCH

Biomechanics of Hard Tissues

Contents

Preface *XI*

List of Contributors *XIII*

1	Bone and Cartilage – its Structure and Physical Properties	1
	<i>Ryszard Wojnar</i>	
1.1	Introduction	1
1.1.1	The Structure of Living Organisms	7
1.1.2	Growth of Living Organisms	9
1.1.2.1	Ring-Shaped Grain Boundary	10
1.1.3	Planarity of Biological Structures	12
1.2	Macroscopic Structure of the Bone	13
1.2.1	Growth of the Bone	13
1.2.2	Structure of the Body	16
1.2.3	Macroscopic Structure of Skeleton	17
1.2.4	Apatite in the Bone	18
1.2.5	Structure of the Bone	21
1.3	Microscopic Structure of the Bone	22
1.3.1	General	22
1.3.2	Osteon	24
1.3.3	Bone Innervation	28
1.3.3.1	Anatomy of Bone Innervation	30
1.3.4	Bone Cells	31
1.3.4.1	Cells	31
1.3.4.2	Cell Membrane	32
1.3.4.3	Membrane Transport	34
1.3.4.4	Bone Cell Types	35
1.3.4.5	Osteoclasts	38
1.3.5	Cellular Image – OPG/RANK/RANKL Signaling System	39
1.3.5.1	Osteoprotegerin	40
1.3.5.2	RANK/RANKL	41
1.3.5.3	TACE	42
1.3.5.4	Bone Modeling and Remodeling	42
1.3.6	Proteins and Amino Acids	46

1.3.7	Collagen and its Properties	48
1.3.7.1	Molecular Structure	51
1.3.8	Geometry of Triple Helix	52
1.3.9	Polymer Thermodynamics	55
1.3.9.1	Thermodynamics	55
1.3.9.2	Ideal Chain	56
1.3.9.3	Wormlike Chain	57
1.3.9.4	Architecture of Biological Fibers	58
1.3.9.5	Architecture of Collagen Fibers in Human Osteon	59
1.3.9.6	Collagen Elasticity	60
1.4	Remarks and Conclusions	63
1.5	Comments	64
1.6	Acknowledgments	65
	References	65
	Further Reading	75

2 Numerical Simulation of Bone Remodeling Process Considering Interface Tissue Differentiation in Total Hip Replacements 77

Eduardo A. Fancello, Darlan Dallacosta, and Carlos R. M. Roesler

2.1	Introduction	77
2.2	Mechanical Adaptation of Bone	79
2.3	Constitutive Models	80
2.3.1	Bone Constitutive Model	80
2.3.2	Interface Constitutive Model	82
2.3.3	Model for Periprosthetic Adaptation	85
2.3.4	Model for Interfacial Adaptation	89
2.4	Numerical Examples	90
2.5	Final Remarks	98
2.6	Acknowledgments	98
	References	99

3 Bone as a Composite Material 101

Michelle L. Oyen and Virginia L. Ferguson

3.1	Introduction	101
3.2	Bone Phases	102
3.2.1	Organic	103
3.2.2	Mineral	103
3.2.3	Physical Structure of Bone Material	104
3.2.4	Water	104
3.3	Bone Phase Material Properties	105
3.3.1	Organic Matrix	105
3.3.2	Mineral Phase	106
3.3.3	Water	107
3.3.4	Elastic Modulus of Composite Materials	108
3.4	Bone as a Composite: Macroscopic Effects	111

3.5	Bone as a Composite: Microscale Effects	112
3.6	Bone as a Composite: Anisotropy Effects	113
3.7	Bone as a Composite: Implications	117
	References	119
4	Mechanobiological Models for Bone Tissue. Applications to Implant Design	123
	<i>José Manuel García-Aznar, María José Gómez-Benito, María Ángeles Pérez, and Manuel Doblaré</i>	
4.1	Introduction	123
4.2	Biological and Mechanobiological Factors in Bone Remodeling and Bone Fracture Healing	124
4.2.1	Bone Remodeling	124
4.2.2	Bone Fracture Healing	125
4.3	Phenomenological Models of Bone Remodeling	126
4.4	Mechanistic Models of Bone Remodeling	126
4.5	Examples of Application of Bone Remodeling Models to Implant Design	128
4.6	Models of Tissue Differentiation. Application to Bone Fracture Healing	133
4.7	Mechanistic Models of Bone Fracture Healing	134
4.8	Examples of Application of Bone Fracture Healing Models to Implant Design	137
4.9	Concluding Remarks	140
	References	140
5	Biomechanical Testing of Orthopedic Implants; Aspects of Tribology and Simulation	145
	<i>Yoshitaka Nakanishi</i>	
5.1	Introduction	145
5.2	Tribological Testing of Orthopedic Implants	145
5.3	Tribological Testing of Tissue from a Living Body	152
5.4	Theoretical Analysis for Tribological Issues	154
	References	155
6	Constitutive Modeling of the Mechanical Behavior of Trabecular Bone – Continuum Mechanical Approaches	159
	<i>Andreas Öchsner and Seyed Mohammad Hossein Hosseini</i>	
6.1	Introduction	159
6.2	Summary of Elasticity Theory and Continuum Mechanics	160
6.2.1	Stress Tensor and Decomposition	160
6.2.2	Invariants	161
6.3	Constitutive Equations	164
6.3.1	Linear Elastic Behavior: Generalized Hooke's Law for Isotropic Materials	165

6.3.2	Linear Elastic Behavior: Generalized Hooke's Law for Orthotropic Materials	171
6.3.3	Linear Elastic Behavior: Generalized Hooke's Law for Orthotropic Materials with Cubic Structure	173
6.3.4	Linear Elastic Behavior: Generalized Hooke's Law for Transverse Isotropic Materials	173
6.3.5	Plastic Behavior, Failure, and Limit Surface	174
6.4	The Structure of Trabecular Bone and Modeling Approaches	181
6.4.1	Structural Analogies: Cellular Plastics and Metals	183
6.5	Conclusions	189
	References	189
7	Mechanical and Magnetic Stimulation on Cells for Bone Regeneration	193
	<i>Humphrey Hak Ping Yiu and Kuo-Kang Liu</i>	
7.1	Introduction	193
7.2	Mechanical Stimulation on Cells	194
7.2.1	Various Mechanical Stimulations	194
7.2.2	Techniques for Applying Mechanical Loading	195
7.2.3	Mechanotransduction	196
7.2.4	Mechanical Influences on Stem Cell	197
7.3	Magnetic Stimulation on Cells	199
7.3.1	Magnetic Nanoparticles for Cell Stimulation	199
7.3.1.1	Properties of Magnetic Nanoparticles	199
7.3.1.2	Functionalization of Magnetic Nanoparticles	201
7.3.2	Magnetic Stimulation	201
7.3.2.1	Magnetic Pulling	201
7.3.2.2	Magnetic Twisting	202
7.3.3	Limitation of Using Magnetic Nanoparticles for Cell Stimulation	203
7.3.4	Magnetic Stimulation and Cell Conditioning for Tissue Regeneration	204
7.4	Summary	205
	References	205
8	Joint Replacement Implants	209
	<i>Duncan E. T. Shepherd</i>	
8.1	Introduction	209
8.2	Biomaterials for Joint Replacement Implants	209
8.3	Joint Replacement Implants for Weight-Bearing Joints	211
8.3.1	Introduction	211
8.3.2	Hip Joint Replacement	211
8.3.3	Knee Joint Replacement	215
8.3.4	Ankle Joint Replacement	216
8.3.5	Methods of Fixation for Weight-Bearing Joint Replacement Implants	217

8.4	Joint Replacement Implants for Joints of the Hand and Wrist	218
8.4.1	Introduction	218
8.4.2	Finger Joint Replacement	219
8.4.3	Wrist Joint Replacement	222
8.5	Design of Joint Replacement Implants	223
8.5.1	Introduction	223
8.5.2	Feasibility	225
8.5.3	Design	225
8.5.4	Verification	226
8.5.5	Manufacture	228
8.5.6	Validation	228
8.5.7	Design Transfer	229
8.5.8	Design Changes	229
8.6	Conclusions	230
	References	230
9	Interstitial Fluid Movement in Cortical Bone Tissue	233
	<i>Stephen C. Cowin</i>	
9.1	Introduction	233
9.2	Arterial Supply	234
9.2.1	Overview of the Arterial System in Bone	234
9.2.2	Dynamics of the Arterial System	236
9.2.3	Transcortical Arterial Hemodynamics	237
9.2.4	The Arterial System in Small Animals may be Different from that in Humans	238
9.3	Microvascular Network of the Medullary Canal	239
9.4	Microvascular Network of Cortical Bone	240
9.5	Venous Drainage of Bone	241
9.6	Bone Lymphatics and Blood Vessel Trans-Wall Transport	241
9.7	The Levels of Bone Porosity and their Bone Interfaces	244
9.7.1	The Vascular Porosity (PV)	244
9.7.2	The Lacunar–Canalicular Porosity (PLC)	245
9.7.3	The Collagen–Hydroxyapatite Porosity (PCA)	245
9.7.4	Cancellous Bone Porosity	246
9.7.5	The Interfaces between the Levels of Bone Porosity	246
9.8	Interstitial Fluid Flow	248
9.8.1	The Different Fluid Pressures in Long Bones (Blood Pressure, Interstitial Fluid Pressure, and Intramedullary Pressure)	248
9.8.2	Interstitial Flow and Mechanosensation	249
9.8.3	Electrokinetic Effects in Bone	252
9.8.4	The Poroelastic Model for the Cortical Bone	254
9.8.5	Interchange of Interstitial Fluid between the Vascular and Lacunar–Canalicular Porosities	257
9.8.6	Implications for the Determination of the Permeabilities	262
	References	263

10	Bone Implant Design Using Optimization Methods	267
	<i>Paulo R. Fernandes, Rui B. Ruben, and Joao Folgado</i>	
10.1	Introduction	267
10.2	Optimization Methods for Implant Design	269
10.2.1	Cemented Stems	269
10.2.2	Uncemented Stems	270
10.3	Design Requirements for a Cementless Hip Stem	271
10.3.1	Implant Stability	272
10.3.2	Stress Shielding Effect	272
10.4	Multicriteria Formulation for Hip Stem Design	273
10.4.1	Design Variables and Geometry	274
10.4.2	Objective Function for Interface Displacement	275
10.4.3	Objective Function for Interface Stress	275
10.4.4	Objective Function for Bone Remodeling	276
10.4.5	Multicriteria Objective Function	277
10.5	Computational Model	277
10.5.1	Optimization Algorithm	278
10.5.2	Finite Element Model	280
10.6	Optimal Geometries Analysis	281
10.6.1	Optimal Geometry for Tangential Interfacial Displacement – f_d	282
10.6.2	Optimal Geometry for Normal Contact Stress – f_t	283
10.6.3	Optimal Geometry for Remodeling – f_r	284
10.6.4	Multicriteria Optimal Geometries – f_{mc}	286
10.7	Long-Term Performance of Optimized Implants	289
10.8	Concluding Remarks	294
	References	295
	Index	297
