<i>Executive Summary</i>	xii

PART 1 BEST PRACTICES IN THE DEPLOYMENT OF RENEWABLE ENERGY FOR HEATING AND COOLING IN THE RESIDENTIAL SECTOR	1
1 Introduction	3
1.1 Background	3
1.2 Objectives	4
1.3 Project scope	4
1.4 Approach	10
1.5 Report organization	12
2 Review of Country Experience	14
2.1 Information collected	14
2.2 Comparison of GDP and residential conventional energy costs	14
2.3 REHC installed capacity, resource and cost comparisons	16
2.4 Relative cost of renewable heating and cooling	21
3 Review of Programmes	27
3.1 Selection of programmes for further investigation	27
3.2 Data collection and development of programme summaries	28
3.3 Trends and patterns in successful programmes	28
3.4 Definitions, drivers and indicators of 'success'	29
4 Best Practices	30
4.1 Selection of best practices	30
4.2 Best practice guide organization	30
4.3 Best practice analysis	32
5 Conclusions and Recommendations	39
5.1 Review of country experience with REHC technologies	39
5.2 Review of successful REHC programmes	40
5.3 Best practices for REHC programmes	40
5.4 Key conclusions	41
5.5 Recommendations	42
5.6 Additional recommendations for future work	43

6 Country Summaries	45
6.1 Austria	45
6.2 Canada	47
6.3 Denmark	48
6.4 France	50
6.5 Germany	51
6.6 Ireland	52
6.7 Italy	54
6.8 Japan	55
6.9 Netherlands	57
6.10 Norway	58
6.11 Spain	59
6.12 UK	61
6.13 US	62
6.14 China	64
7 Programme Selection and Case Studies	70
7.1 Programme selection	71
7.2 Programme case studies	76
<i>Spar mit Solar</i> (Austrian regional promotion programme)	76
<i>Ja zu Solar</i> (Austrian regional promotion programme)	81
Salzburg (Austrian regional subsidy programme)	84
Vorarlberg (Austrian regional subsidy programme)	89
Upper Austria's Energy Action Plans	95
<i>Umweltlandesfonds Steiermark</i> (Austrian regional subsidy programme)	100
<i>Marktanzreizprogramm</i> (Market Incentive Programme),	
German Financial Incentive Programme for Renewable Heat	105
The Solar Keymark Certification Scheme for Solar Thermal Products	112
Barcelona, Spain Solar Thermal Ordinance	117
France's Direct Tax Credit	122
Norway's Household Subsidy Programme	130
Climate Alliance of European Cities	136
Innovative Programmes	141
8 Part 1 Glossary	146
PART 2 BEST PRACTICES GUIDE	149
9 This Guide	151
9.1 Introduction	151
9.2 How to use this guide	152
9.3 Scope of the guide	152
9.4 Source of information provided in this guide	156

10 Best Practices	166
10.1 Best Practice 1: Establish plans and programmes to achieve the established targets. These programmes should address all market participants and should be long-term	166
10.2 Best Practice 2: Consider having a third party design, implement and/or evaluate the programme	169
10.3 Best Practice 3: Break longer-term targets into shorter-term milestone targets	172
10.4 Best Practice 4: Design and implement evaluations and refine both portfolio targets and programmes based on the evaluations	173
10.5 Best Practice 5: Develop flexible plans and tools to support regional or municipal progress to the established targets	174
10.6 Best Practice 6: Establish clear, consistent, ambitious but achievable portfolio targets	176
10.7 Best Practice 7: Identify and encourage 'early adopters'	178
10.8 Best Practice 8: Consider offering additional incentive amounts for higher quality equipment or additional efficiency measures	179
10.9 Best Practice 9: Consider requesting technical drawings from installers	180
10.10 Best Practice 10: Regulate the quality of the equipment and installations funded with incentives	182
10.11 Best Practice 11: Design and implement long-term programmes	183
10.12 Best Practice 12: Offer incentives by energy (kWh) or capacity (kW or m ²) rather than as a percentage of cost	186
10.13 Best Practice 13: Penalize non-compliance with 'stick' programmes	188
10.14 Best Practice 14: Develop and run programme in close cooperation with relevant public bodies and industry partners or organizations	189
10.15 Best Practice 15: Establish market needs/barriers prior to programme design	192
10.16 Best Practice 16: Establish clear programme objectives, targets and performance indicators	193
10.17 Best Practice 17: Consider requesting an energy audit certificate with the application	196
10.18 Best Practice 18: Design and implement multifaceted programmes	197
10.19 Best Practice 19: Design application process to be efficient for both homeowners and programme administration	200

10.20	Best Practice 20: Ensure that the market infrastructure can successfully deliver and install products being promoted	203
10.21	Best Practice 21: Design programme with adequate flexibility to adapt to market changes	205
10.22	Best Practice 22: Engage media to provide publicity	207
10.23	Best Practice 23: Develop and distribute tools that facilitate household participation	208
10.24	Best Practice 24: Invest in high-quality promotion materials for information campaigns	210
10.25	Best Practice 25: Ensure a central point for accurate information	211
10.26	Best Practice 26: Design programme with entry and exit strategies	213
10.27	Best Practice 27: Get committed renewable energy champions to participate	214
10.28	Best Practice 28: Include an evaluation component in the programme design	215
10.29	Best Practice 29: Design programme to complement, not conflict, with other programmes in region	218
10.30	Best Practice 30: Limit information campaigns to specific, clear messages	220
10.31	Best Practice 31: Keep business interests in the background during information campaigns	221
10.32	Best Practice 32: Monitor and publicize progress towards targets	222
11	Part 2 Glossary	225
