<i>Preface</i>	<i>page</i>	xiii
<i>To the reader</i>	xv	
<i>List of tables</i>	xvii	
Part 0 General Remarks and Basic Concepts		1
1 The Classical Field Equations	3	
1.1 Vector fields	3	
1.2 The fundamental equations	6	
1.3 Diffusion	10	
1.4 Fluid mechanics	12	
1.5 Electromagnetism	14	
1.6 Linear elasticity	16	
1.7 Quantum mechanics	18	
1.8 Eigenfunction expansions: introduction	19	
2 Some Simple Preliminaries	27	
2.1 The method of eigenfunction expansions	27	
2.2 Variation of parameters	30	
2.3 The “ δ -function”	35	
2.4 The idea of Green’s functions	39	
2.5 Power series solution	42	
Part I Applications		51
3 Fourier Series: Applications	53	
3.1 Summary of useful relations	53	
3.2 The diffusion equation	58	
3.3 Waves on a string	67	
3.4 Poisson equation in a square	68	
3.5 Helmholtz equation in a semi-infinite strip	72	
3.6 Laplace equation in a disk	73	
3.7 The Poisson equation in a sector	77	
3.8 The quantum particle in a box: eigenvalues of the Laplacian	78	
3.9 Elastic vibrations	80	
3.10 A comment on the method of separation of variables	82	
3.11 Other applications	83	

4	Fourier Transform: Applications	84
4.1	Useful formulae for the exponential transform	84
4.2	One-dimensional Helmholtz equation	90
4.3	Schrödinger equation with a constant force	93
4.4	Diffusion in an infinite medium	95
4.5	Wave equation	100
4.6	Laplace equation in a strip and in a half-plane	107
4.7	Example of an ill-posed problem	108
4.8	The Hilbert transform and dispersion relations	110
4.9	Fredholm integral equation of the convolution type	112
4.10	Useful formulae for the sine and cosine transforms	113
4.11	Diffusion in a semi-infinite medium	116
4.12	Laplace equation in a quadrant	118
4.13	Laplace equation in a semi-infinite strip	120
4.14	One-sided transform	121
4.15	Other applications	122
5	Laplace Transform: Applications	123
5.1	Summary of useful relations	123
5.2	Ordinary differential equations	128
5.3	Difference equations	133
5.4	Differential-difference equations	136
5.5	Diffusion equation	138
5.6	Integral equations	144
5.7	Other applications	145
6	Cylindrical Systems	146
6.1	Cylindrical coordinates	146
6.2	Summary of useful relations	147
6.3	Laplace equation in a cylinder	154
6.4	Fundamental solution of the Poisson equation	157
6.5	Transient diffusion in a cylinder	159
6.6	Formulae for the Hankel transform	162
6.7	Laplace equation in a half-space	163
6.8	Axisymmetric waves on a liquid surface	166
6.9	Dual integral equations	168
7	Spherical Systems	170
7.1	Spherical polar coordinates	171
7.2	Spherical harmonics: useful relations	173
7.3	A sphere in a uniform field	178
7.4	Half-sphere on a plane	179
7.5	General solution of the Laplace and Poisson equations	181
7.6	The Poisson equation in free space	182

7.7	General solution of the biharmonic equation	183
7.8	Exterior Poisson formula for the Dirichlet problem	184
7.9	Point source near a sphere	185
7.10	A domain perturbation problem	187
7.11	Conical boundaries	191
7.12	Spherical Bessel functions: useful relations	194
7.13	Fundamental solution of the Helmholtz equation	196
7.14	Scattering of scalar waves	200
7.15	Expansion of a plane vector wave	203
7.16	Scattering of electromagnetic waves	205
7.17	The elastic sphere	207
7.18	Toroidal–poloidal decomposition and viscous flow	208
	Part II Essential Tools	213
8	Sequences and Series	215
8.1	Numerical sequences and series	215
8.2	Sequences of functions	219
8.3	Series of functions	224
8.4	Power series	228
8.5	Other definitions of the sum of a series	230
8.6	Double series	232
8.7	Practical summation methods	234
9	Fourier Series: Theory	242
9.1	The Fourier exponential basis functions	242
9.2	Fourier series in exponential form	244
9.3	Point-wise convergence of the Fourier series	245
9.4	Uniform and absolute convergence	248
9.5	Behavior of the coefficients	249
9.6	Trigonometric form	252
9.7	Sine and cosine series	253
9.8	Term-by-term integration and differentiation	256
9.9	Change of scale	258
9.10	The Gibbs phenomenon	261
9.11	Other modes of convergence	263
9.12	The conjugate series	265
10	The Fourier and Hankel Transforms	266
10.1	Heuristic motivation	266
10.2	The exponential Fourier transform	268
10.3	Operational formulae	270
10.4	Uncertainty relation	271
10.5	Sine and cosine transforms	272

10.6	One-sided and complex Fourier transform	274
10.7	Integral asymptotics	276
10.8	Asymptotic behavior	281
10.9	The Hankel transform	282
11	The Laplace Transform	285
11.1	Direct and inverse Laplace transform	285
11.2	Operational formulae	287
11.3	Inversion of the Laplace transform	291
11.4	Behavior for small and large t	295
12	The Bessel Equation	302
12.1	Introduction	302
12.2	The Bessel functions	304
12.3	Spherical Bessel functions	309
12.4	Modified Bessel functions	310
12.5	The Fourier–Bessel and Dini series	312
12.6	Other series expansions	315
13	The Legendre Equation	317
13.1	Introduction	317
13.2	The Legendre equation	318
13.3	Legendre polynomials	319
13.4	Expansion in series of Legendre polynomials	324
13.5	Legendre functions	326
13.6	Associated Legendre functions	328
13.7	Conical boundaries	330
13.8	Extensions	332
13.9	Orthogonal polynomials	334
14	Spherical Harmonics	337
14.1	Introduction	337
14.2	Spherical harmonics	338
14.3	Expansion in series of spherical harmonics	343
14.4	Vector harmonics	345
15	Green's Functions: Ordinary Differential Equations	348
15.1	Two-point boundary value problems	348
15.2	The regular eigenvalue Sturm–Liouville problem	359
15.3	The eigenfunction expansion	366
15.4	Singular Sturm–Liouville problems	375
15.5	Initial-value problem	388
15.6	A broader perspective on Green's functions	392
15.7	Modified Green's function	396

16	Green's Functions: Partial Differential Equations	400
16.1	Poisson equation	400
16.2	The diffusion equation	410
16.3	Wave equation	415
17	Analytic Functions	418
17.1	Complex algebra	418
17.2	Analytic functions	421
17.3	Integral of an analytic function	423
17.4	The Taylor and Laurent series	432
17.5	Analytic continuation I	436
17.6	Multi-valued functions	446
17.7	Riemann surfaces	453
17.8	Analytic continuation II	455
17.9	Residues and applications	459
17.10	Conformal mapping	471
18	Matrices and Finite-Dimensional Linear Spaces	491
18.1	Basic definitions and properties	491
18.2	Determinants	496
18.3	Matrices and linear operators	499
18.4	Change of basis	503
18.5	Scalar product	505
18.6	Eigenvalues and eigenvectors	509
18.7	Simple, normal and Hermitian matrices	511
18.8	Spectrum and singular values	515
18.9	Projections	519
18.10	Defective matrices	522
18.11	Functions of matrices	528
18.12	Systems of ordinary differential equations	530
	Part III Some Advanced Tools	535
19	Infinite-Dimensional Spaces	537
19.1	Linear vector spaces	537
19.2	Normed spaces	541
19.3	Hilbert spaces	548
19.4	Orthogonality	554
19.5	Sobolev spaces	560
19.6	Linear functionals	563
20	Theory of Distributions	568
20.1	Introduction	568

Contents

20.2	Test functions and distributions	569
20.3	Examples	572
20.4	Operations on distributions	575
20.5	The distributional derivative	580
20.6	Sequences of distributions	584
20.7	Multi-dimensional distributions	588
20.8	Distributions and analytic functions	591
20.9	Convolution	593
20.10	The Fourier transform of distributions	595
20.11	The Fourier series of distributions	600
20.12	Laplace transform of distributions	605
20.13	Miscellaneous applications	608
20.14	The Hilbert transform	616
21	Linear Operators in Infinite-Dimensional Spaces	620
21.1	Linear operators	621
21.2	Bounded operators	623
21.3	Compact operators	636
21.4	Unitary operators	644
21.5	The inverse of an operator	647
21.6	Closed operators and their adjoint	649
21.7	Solvability conditions and the Fredholm alternative	657
21.8	Invariant subspaces and reduction	660
21.9	Resolvent and spectrum	661
21.10	Analytic properties of the resolvent	669
21.11	Spectral theorems	671
<i>Appendix</i>		678
A.1	Sets	678
A.2	Measure	681
A.3	Functions	682
A.4	Integration	686
A.5	Curves	696
A.6	Bounds and limits	697
<i>References</i>		699
<i>Index</i>		707
