1 Introduction	1
1.1 Philosophy of tunnelling	1
1.2 Scope of this book	3
1.3 Historical context	3
1.4 The nature of the ground	6
1.5 Tunnel cross section terminology	7
1.6 Content and layout of this book	7
2 Site investigation	9
2.1 Introduction	9
2.2 Site investigation during a project	10
2.2.1 Introduction	10
2.2.2 Desk study	11
2.2.3 Site reconnaissance	11
2.2.4 Ground investigation (overview)	12
2.3 Ground investigation	13
2.3.1 Introduction	13
2.3.2 Field investigations	13
2.3.2.1 Non-intrusive methods	13
2.3.2.2 Intrusive exploration	18
2.3.3 Laboratory tests	31
2.4 Ground characteristics/parameters	41
2.4.1 Influence of layering on Young's modulus	44
2.4.2 Squeezing and swelling ground	45
2.4.3 Typical ground parameters for tunnel design	46

Contents

2.4.4	<i>Ground (rock mass) classification</i>	49
2.4.4.1	<i>Rock Quality Designation</i>	49
2.4.4.2	<i>Rock Mass Rating</i>	53
2.4.4.3	<i>Rock Mass Quality Rating (Q-method)</i>	54
2.4.4.4	<i>A few comments on the rock mass classification systems</i>	58
2.5	<i>Site investigation reports</i>	60
2.5.1	<i>Types of site investigation report</i>	60
2.5.2	<i>Key information for tunnel design</i>	61
3	Preliminary analyses for the tunnel	64
3.1	<i>Introduction</i>	64
3.2	<i>Preliminary stress pattern in the ground</i>	64
3.3	<i>Stability of soft ground</i>	66
3.3.1	<i>Stability of fine grained soils</i>	67
3.3.2	<i>Stability of coarse grained soils</i>	69
3.4	<i>The coefficient of lateral earth pressure (K_0)</i>	70
3.5	<i>Preliminary analytical methods</i>	73
3.5.1	<i>Introduction</i>	73
3.5.2	<i>Bedded-beam spring method</i>	74
3.5.3	<i>Continuum method</i>	74
3.5.4	<i>Tunnel support resistance method</i>	76
3.6	<i>Preliminary numerical modelling</i>	78
3.6.1	<i>Introduction</i>	78
3.6.2	<i>Modelling the tunnel construction in 2-D</i>	79
3.6.3	<i>Modelling the tunnel construction in 3-D</i>	81
3.6.4	<i>Choice of ground and lining constitutive models</i>	82
4	Ground improvement techniques and lining systems	84
4.1	<i>Introduction</i>	84
4.2	<i>Ground improvement and stabilization techniques</i>	84
4.2.1	<i>Ground freezing</i>	85
4.2.2	<i>Lowering of the groundwater table</i>	89
4.2.3	<i>Grouting</i>	90
4.2.4	<i>Ground reinforcement</i>	95
4.2.5	<i>Forepoling</i>	98
4.2.6	<i>Face dowels</i>	100
4.2.7	<i>Roof pipe umbrella</i>	101
4.2.8	<i>Compensation grouting</i>	102
4.2.9	<i>Pressurized tunnelling (compressed air)</i>	105

4.3	Tunnel lining systems	108
4.3.1	<i>Lining design requirements</i>	108
4.3.2	<i>Sprayed concrete (shotcrete)</i>	109
4.3.3	<i>Ribbed systems</i>	114
4.3.4	<i>Segmental linings</i>	115
4.3.5	<i>In situ concrete linings</i>	123
4.3.6	<i>Fire resistance of concrete linings</i>	125
5	Tunnel construction techniques	127
5.1	Introduction	127
5.2	Open face construction without a shield	128
5.2.1	<i>Timber heading</i>	128
5.2.2	<i>Open face tunnelling with alternative linings</i>	128
5.3	Partial face boring machine (roadheader)	129
5.4	Tunnelling shields	132
5.5	Tunnel boring machines	138
5.5.1	<i>Introduction</i>	138
5.5.2	<i>Tunnel boring machines in hard rock</i>	140
5.5.2.1	<i>Gripper tunnel boring machine</i>	140
5.5.2.2	<i>Shield tunnel boring machines</i>	145
5.5.2.3	<i>General observations for hard rock tunnel boring machines</i>	147
5.5.3	<i>Tunnel boring machines in soft ground</i>	150
5.5.3.1	<i>Introduction</i>	150
5.5.3.2	<i>Slurry tunnelling machines</i>	153
5.5.3.3	<i>Earth pressure balance machines</i>	158
5.5.3.4	<i>Multi-mode tunnel boring machines</i>	161
5.5.3.5	<i>Choice of slurry or earth pressure balance tunnel boring machine</i>	163
5.6	Drill and blast tunnelling	164
5.6.1	<i>Introduction</i>	164
5.6.2	<i>Drilling</i>	165
5.6.3	<i>Charging</i>	168
5.6.4	<i>Stemming</i>	169
5.6.5	<i>Detonating</i>	169
5.6.5.1	<i>Detonating effect</i>	169
5.6.5.2	<i>Types of explosive</i>	170
5.6.5.3	<i>Detonators</i>	172
5.6.5.4	<i>Cut types</i>	174
5.6.5.5	<i>Explosive material requirements</i>	180
5.6.6	<i>Ventilation</i>	180
5.6.7	<i>Mucking and support</i>	182

Contents

5.7	New Austrian Tunnelling Method and sprayed concrete lining	183
5.7.1	<i>New Austrian Tunnelling Method</i>	183
5.7.2	<i>Sprayed concrete lining</i>	187
5.7.3	<i>LaserShell™ technique</i>	192
5.8	Cut-and-cover tunnels	193
5.8.1	<i>Introduction</i>	193
5.8.2	<i>Construction methods</i>	193
5.8.3	<i>Design issues</i>	195
5.8.4	<i>Excavation support methods (shoring systems) for the sides of the excavation</i>	196
5.9	Immersed tube tunnels	201
5.9.1	<i>Introduction</i>	201
5.9.2	<i>Stages of construction for immersed tube tunnels</i>	203
5.9.3	<i>Types of immersed tube tunnel</i>	206
5.9.3.1	<i>Steel shell</i>	206
5.9.3.2	<i>Concrete</i>	206
5.9.4	<i>Immersed tube tunnel foundations and settlements</i>	209
5.9.5	<i>Joints between tube elements</i>	209
5.9.6	<i>Analysis and design</i>	211
5.9.7	<i>Examples of immersed tube tunnels</i>	213
5.10	Jacked box tunnelling	216
5.10.1	<i>Introduction</i>	216
5.10.2	<i>Outline of the method and description of key components</i>	216
5.10.3	<i>Examples of jacked box tunnels</i>	221
5.10.3.1	<i>Vehicular under-bridge, M1 motorway, J15A, Northamptonshire, UK</i>	221
5.10.3.2	<i>I-90 Highway Extension, Boston, Massachusetts, USA</i>	226
5.11	Pipe jacking and microtunnelling	230
5.11.1	<i>Introduction</i>	230
5.11.2	<i>The pipe jacking construction process</i>	231
5.11.3	<i>Maximum drive length for pipe jacking and microtunnelling</i>	235
5.12	Horizontal directional drilling	235
6	Health and safety, and risk management in tunnelling	244
6.1	The health and safety hazards of tunnel construction	244
6.1.1	<i>Introduction</i>	244
6.1.2	<i>Hazards in tunnelling</i>	245
6.1.3	<i>Techniques for risk management</i>	245

6.1.4	<i>Legislation, accidents and ill health statistics</i>	246
6.1.5	<i>Role of the client, designer and contractors</i>	247
6.1.6	<i>Ground risk</i>	248
6.1.7	<i>Excavation and lining methods</i>	249
6.1.8	<i>Tunnel boring machines</i>	249
6.1.9	<i>Tunnel transport</i>	250
6.1.10	<i>Tunnel atmosphere and ventilation</i>	250
6.1.11	<i>Explosives</i>	251
6.1.12	<i>Fire, flood rescue and escape</i>	251
6.1.13	<i>Occupational health</i>	252
6.1.14	<i>Welfare and first aid</i>	253
6.1.15	<i>Work in compressed air</i>	253
6.1.16	<i>Education, training and competence</i>	254
6.1.17	<i>Concluding remarks</i>	255
6.2	<i>Risk management in tunnelling projects</i>	255
6.2.1	<i>Introduction</i>	255
6.2.2	<i>Risk identification</i>	258
6.2.3	<i>Analyzing risks</i>	258
6.2.4	<i>Evaluating risks</i>	259
6.2.5	<i>Risk monitoring and reviewing</i>	259
7	Ground movements and monitoring	262
7.1	<i>Ground deformation in soft ground</i>	262
7.1.1	<i>Surface settlement profiles</i>	263
7.1.1.1	<i>Estimating the trough width parameter, i</i>	266
7.1.1.2	<i>Volume loss</i>	268
7.1.2	<i>Horizontal displacements</i>	269
7.1.3	<i>Long-term settlements</i>	270
7.1.4	<i>Multiple tunnels</i>	271
7.2	<i>Effects of tunnelling on surface and subsurface structures</i>	271
7.2.1	<i>Effect of tunnelling on existing tunnels, buried utilities and piled foundations</i>	272
7.2.2	<i>Design methodology</i>	276
7.3	<i>Monitoring</i>	280
7.3.1	<i>Challenges and purpose</i>	280
7.3.2	<i>Trigger values</i>	282
7.3.3	<i>Observational method</i>	283
7.3.4	<i>In-tunnel monitoring during New Austrian Tunnelling Method tunnelling operations</i>	285
7.3.4.1	<i>Measurements</i>	285
7.3.4.2	<i>General development of displacements</i>	287

7.3.4.3	<i>Interpretation of the measurements: displacements</i>	289
7.3.4.4	<i>Interpretation of the measurements: comparative observation</i>	291
7.3.4.5	<i>Interpretation of the measurements: deformation</i>	293
7.3.4.6	<i>Interpretation of the measurements: stress-intensity-index</i>	296
7.3.4.7	<i>Measuring frequency and duration</i>	298
7.3.4.8	<i>Contingency measures</i>	298
7.3.5	<i>Instrumentation for in-tunnel and ground monitoring</i>	304
7.3.6	<i>Instrumentation for monitoring existing structures</i>	307
8	Case studies	311
8.1	Eggetunnel, Germany	311
8.1.1	<i>Project overview</i>	311
8.1.2	<i>Invert failure of the total cross section in the Eggetunnel</i>	312
8.1.3	<i>Sprayed concrete invert – its purpose and monitoring</i>	314
8.2	London Heathrow T5, UK: construction of the Piccadilly Line Extension Junction	319
8.2.1	<i>Project overview</i>	319
8.2.2	<i>The ‘Box’</i>	319
8.2.3	<i>Construction of the sprayed concrete lining tunnels</i>	321
8.2.4	<i>Ground conditions</i>	321
8.2.5	<i>The LaserShell™ method</i>	322
8.2.6	<i>TunnelBeamer™</i>	323
8.2.7	<i>Monitoring</i>	325
8.2.7.1	<i>Existing Piccadilly Tunnel Eastside</i>	325
8.2.7.2	<i>Existing Piccadilly Tunnel Westside</i>	325
8.3	Lainzer Tunnel LT31, Vienna, Austria	330
8.3.1	<i>Project overview</i>	330
8.3.2	<i>Geology</i>	333
8.3.3	<i>Starting construction from the shafts</i>	333
8.3.4	<i>Side wall drift section: excavation sequence and cross section</i>	334
8.3.5	<i>Monitoring of the sprayed concrete lining of the side wall drift section</i>	339
8.3.6	<i>Cracks in the sprayed concrete lining</i>	339

Appendix A: Further information on rock mass classification systems	345
A.1 Rock Mass Rating	345
A.2 Rock Mass Quality Rating (Q)	350
A.2.1 <i>Use of the Q-method for predicting TBM performance</i>	354
Appendix B: Analytical calculation of a sprayed concrete lining using the continuum method	356
B.1 Introduction	356
B.2 Analytical model using Ahrens <i>et al.</i> (1982)	357
B.3 Required equations and calculation process	358
B.4 Example for a tunnel at King's Cross Station, London	361
 <i>References and bibliography</i>	 368
<i>Index</i>	385
