

Contents

Session 1. A First Look at SPSS Statisitcs 18 1

Objectives 1
Launching SPSS/PASW Statistics 18 1
Entering Data into the Data Editor 3
Saving a Data File 6
Creating a Bar Chart 7
Saving an Output File 11
Getting Help 12
Printing in SPSS 12
Quitting SPSS 12

Session 2. Tables and Graphs for One Variable 13

Objectives 13
Opening a Data File 13
Exploring the Data 14
Creating a Histogram 16
Frequency Distributions 20
Another Bar Chart 22
Printing Session Output 22
Moving On... 23

Session 3. Tables and Graphs for Two Variables 27

Objectives 27 Cross-Tabulating Data 27 Editing a Recent Dialog 29 More on Bar Charts 29 Comparing Two Distributions 32

Scatterplots to Detect Relationships 33 Moving On... 34

Session 4. One-Variable Descriptive Statistics 39

Objectives 39

Computing One Summary Measure for a Variable 39

Computing Additional Summary Measures 43

A Box-and-Whiskers Plot 46

Standardizing a Variable 47

Moving On... 48

Session 5. Two-Variable Descriptive Statistics 51

Objectives 51

Comparing Dispersion with the Coefficient of Variation 51

r.

Descriptive Measures for Subsamples 53

Measures of Association: Covariance and Correlation 54

Moving On... 57

Session 6. Elementary Probability 61

Objectives 61

Simulation 61

A Classical Example 61

Observed Relative Frequency as Probability 63

Handling Alphanumeric Data 65

Moving On... 68

Session 7. Discrete Probability Distributions 71

Objectives 71

An Empirical Discrete Distribution 71

Graphing a Distribution 73

A Theoretical Distribution: The Binomial 74

Another Theoretical Distribution: The Poisson 76

Moving On... 77

Session 8. Normal Density Functions 81

Objectives 81

Continuous Random Variables 81

Generating Normal Distributions 82

Finding Areas under a Normal Curve 85

Normal Curves as Models 87 , Moving On... 89

Session 9. Sampling Distributions 93

Objectives 93
What Is a Sampling Distribution? 93
Sampling from a Normal Population 94
Central Limit Theorem 97
Sampling Distribution of the Proportion 99
Moving On... 100

Session 10. Confidence Intervals 103

Objectives 103
The Concept of a Confidence Interval 103
Effect of Confidence Coefficient 106
Large Samples from a Non-normal (Known) Population 106
Dealing with Real Data 107
Small Samples from a Normal Population 108
Moving On... 110

Session 11. One-Sample Hypothesis Tests 113

Objectives 113
The Logic of Hypothesis Testing 113
An Artificial Example 114
A More Realistic Case: We Don't Know Mu or Sigma 117
A Small-Sample Example 119
Moving On... 121

Session 12. Two-Sample Hypothesis Tests 125

Objectives 125 Working with Two Samples 125 Paired vs. Independent Samples 130 Moving On... 132

Session 13. Analysis of Variance (I) 137

Objectives 137 Comparing Three or More Means 137 One-Factor Independent Measures ANOVA 138 Where Are the Differences? 142 One-Factor Repeated Measures ANOVA 144 Where Are the Differences? 149 Moving On... 149

Session 14. Analysis of Variance (II) 153

Objectives 153 Two-Factor Independent Measures ANOVA 153 Another Example 159 One Last Note 161 Moving On... 162

Session 15. Linear Regression (I) 165

Objectives 165
Linear Relationships 165
Another Example 170
Statistical Inferences in Linear Regression 171
An Example of a Questionable Relationship 172
An Estimation Application 173
A Classic Example 174
Moving On... 175

Ţ

Session 16. Linear Regression (II) 179

Objectives 179
Assumptions for Least Squares Regression 179
Examining Residuals to Check Assumptions 180
A Time Series Example 185
Issues in Forecasting and Prediction 187
A Caveat about "Mindless" Regression 190
Moving On... 191

Session 17. Multiple Regression 195

Objectives 195
Going Beyond a Single Explanatory Variable 195
Significance Testing and Goodness of Fit 201
Residual Analysis 202
Adding More Variables 202
Another Example 203
Working with Qualitative Variables 204
A New Concern 206
Moving On... 207

Session 18. Nonlinear Models 211

Objectives 211
When Relationships Are Not Linear 211
A Simple Example 212
Some Common Transformations 213
Another Quadratic Model 215
A Log-Linear Model 220
Adding More Variables 221
Moving On... 221

Session 19. Basic Forecasting Techniques 225

Objectives 225
Detecting Patterns over Time 225
Some Illustrative Examples 226
Forecasting Using Moving Averages 228
Forecasting Using Trend Analysis 231
Another Example 234
Moving On... 234

Session 20. Chi-Square Tests 237

Objectives 237 Qualitative vs. Quantitative Data 237 Chi-Square Goodness-of-Fit Test 237 Chi-Square Test of Independence 241 Another Example 244 Moving On... 245

Session 21. Nonparametric Tests 249

Objectives 249
Nonparametric Methods 249
Mann-Whitney U Test 250
Wilcoxon Signed Ranks Test 252
Kruskal-Wallis H Test 254
Spearman's Rank Order Correlation 257
Moving On... 258

Session 22. Tools for Quality 261

Objectives 261
Processes and Variation 261

Charting a Process Mean 262 Charting a Process Range 265 Another Way to Organize Data 266 Charting a Process Proportion 268 Pareto Charts 270 Moving On... 272

Appendix A. Dataset Descriptions 275

Appendix B. Working with Files 309

Objectives 309
Data Files 309
Viewer Document Files 310
Converting Other Data Files into SPSS Data Files 311

Index 315
