

# **STRUCTURAL ELEMENTS DESIGN MANUAL**

**WORKING WITH EUROCODES**

**TREVOR DRAYCOTT  
PETER BULLMAN**

# *Contents*

|   |           |
|---|-----------|
| <i>Preface</i> .....  | <i>ix</i> |
| <b>1 General Matters</b> .....  | <b>1</b>  |
| 1.1 Introduction .....  | 1         |
| 1.2 Codes and Standards .....   | 2         |
| 1.3 Loads and Actions .....   | 4         |
| 1.4 Limit State Design Philosophy .....   | 8         |
| 1.5 Determining Loads on Individual Structural Elements .....                             | 12        |
| 1.6 Structural Mechanics .....  | 21        |
| 1.7 Design of Beams for Bending Moment.....   | 23        |
| 1.8 Compression Members.....  | 31        |
| 1.9 Material Properties .....   | 33        |
| 1.10 Summary .....  | 33        |
| <b>2 Timber Elements</b> .....  | <b>35</b> |
| 2.1 Structural Design of Timber.....  | 35        |
| 2.2 Timber Strength Classes.....  | 38        |
| 2.3 Variation of Timber Stiffness and Strength with Load Duration and Service Class ..... | 40        |
| 2.4 Solid Timber .....  | 41        |
| 2.5 Durability.....   | 42        |
| 2.6 Load Duration and Service Class: The $k_{\text{mod}}$ Factor for Design at ULS .....  | 45        |
| 2.6.1 Timber Strength at ULS .....  | 45        |
| 2.6.2 A Rule of Thumb for ULS Strength Checks .....                                       | 45        |
| 2.7 System Strength: The $k_{\text{sys}}$ Factor for Design at ULS .....                  | 47        |
| 2.8 Timber Beams and Joists.....  | 48        |
| 2.8.1 Bending ULS .....   | 48        |
| 2.8.2 Bearing ULS: Compression Perpendicular to the Grain at Support Bearings .....       | 51        |
| 2.8.3 Shear ULS .....   | 52        |
| 2.8.4 Deflection SLS .....  | 55        |

|  |           |
|--|-----------|
| 2.9 Engineered Timber Products and Connections .....             | 65        |
| 2.10 Compression Members: Timber Posts, Columns and Struts ..... | 67        |
| 2.11 References .....  | 73        |
| <b>3 Concrete Elements .....</b>                                 | <b>75</b> |
| 3.1 Structural Design of Reinforced Concrete .....               | 75        |
| 3.2 Symbols .....  | 76        |
| 3.3 Material Properties .....                                    | 78        |
| 3.3.1 Reinforcing Bars .....                                     | 78        |
| 3.3.2 Concrete .....   | 79        |
| 3.3.3 Partial Safety Factors.....                                | 81        |
| 3.4 Durability.....  | 81        |
| 3.4.1 Shape and Bulk of Concrete.....                            | 82        |
| 3.4.2 Concrete Cover to the Reinforcement.....                   | 82        |
| 3.5 Resistance to Fire .....                                     | 84        |
| 3.6 Minimum Cover to Reinforcement .....                         | 86        |
| 3.7 Limits on Areas of Reinforcement and Bar Spacing.....        | 87        |
| 3.7.1 Minimum Reinforcement and Maximum Bar Spacing .....        | 87        |
| 3.7.2 Maximum Reinforcement and Minimum Bar Spacing .....        | 89        |
| 3.8 Flexural Members.....  | 89        |
| 3.9 Beams .....  | 89        |
| 3.9.1 Effective Span of Beams .....                              | 89        |
| 3.9.2 Deep Beams.....  | 90        |
| 3.9.3 Slender Beams.....   | 90        |
| 3.9.4 Design of Beams for Bending ULS.....                       | 90        |
| 3.9.5 Design of Beams for Shear ULS .....                        | 98        |
| 3.9.6 Design of Beams for Deflection SLS .....                   | 103       |
| 3.9.7 Design Summary for Beams .....                             | 109       |
| 3.10 Slabs .....   | 109       |
| 3.10.1 Design of Slabs for Bending ULS.....                      | 112       |
| 3.10.2 Design of Slabs for Shear ULS .....                       | 112       |
| 3.10.3 Design of Slabs for Deflection SLS .....                  | 113       |
| 3.10.4 Design of Slabs for Cracking SLS .....                    | 113       |
| 3.11 Columns.....  | 116       |
| 3.11.1 Braced and Unbraced Columns.....                          | 116       |
| 3.11.2 Short and Slender Columns.....                            | 117       |
| 3.11.3 Maximum and Minimum Reinforcement in Columns .....        | 119       |
| 3.11.4 Short, Axially Loaded Columns .....                       | 120       |
| 3.11.5 Columns with Bending Moment .....                         | 122       |

---

|   |            |
|---|------------|
| 3.11.6 Use of Column Design Charts.....   | 123        |
| 3.11.7 Design Summary for Short Braced Columns.....   | 128        |
| 3.12 References .....   | 129        |
| <b>4 Masonry Elements.....</b>  | <b>131</b> |
| 4.1 Structural Design of Masonry .....  | 131        |
| 4.2 Symbols and Definitions .....   | 132        |
| 4.3 Materials.....  | 133        |
| 4.3.1 Bricks and Blocks.....  | 134        |
| 4.3.2 Mortar.....   | 138        |
| 4.3.3 Thin-Joint Masonry .....  | 140        |
| 4.3.4 Cavity Wall Ties .....  | 140        |
| 4.3.5 Damp Proof Courses .....  | 141        |
| 4.4 Material Properties .....   | 141        |
| 4.4.1 Compressive Strength of Masonry Units .....   | 141        |
| 4.4.2 Ultimate Compressive Strength of Masonry .....  | 143        |
| 4.4.3 Partial Safety Factors for Materials.....   | 145        |
| 4.5 Factors Influencing the Loadbearing Capacity of Masonry Members .....   | 146        |
| 4.5.1 Minimum Wall Thickness .....  | 146        |
| 4.5.2 Capacity Reduction Factor for Walls of Small Cross-Section Area $\Phi_A$ .....  | 146        |
| 4.5.3 Lateral Restraint .....   | 146        |
| 4.5.4 Effective Length .....  | 148        |
| 4.5.5 Effective Thickness .....   | 148        |
| 4.5.6 Slenderness Ratio .....   | 150        |
| 4.5.7 Load Eccentricity .....   | 151        |
| 4.6 Calculation of Unit Strength and Mortar Grade Required to Carry a Vertical Load .....   | 157        |
| 4.7 Calculation of Unit Strength and Mortar Grade Required to Carry a Vertical Load Using the Simplified Method of EC6 Part 3 ..... | 167        |
| 4.8 Concentrated Loads.....   | 178        |
| 4.9 References .....  | 181        |
| <b>5 Steel Elements .....</b>   | <b>183</b> |
| 5.1 Structural Design of Steel Elements.....  | 183        |
| 5.2 Symbols .....   | 187        |
| 5.3 Material Properties .....   | 189        |
| 5.4 Section Properties.....   | 191        |
| 5.5 Beams .....   | 206        |
| 5.5.1 Beam Bending ULS .....  | 207        |
| 5.5.1.1 Lateral Torsional Buckling.....   | 207        |

|   |            |
|---|------------|
| 5.5.1.2 Bending Strength ULS of Laterally Restrained Beams .....    | 209        |
| 5.5.1.3 Bending Strength ULS of Laterally Unrestrained Beams.....   | 211        |
| 5.5.2 Beam Shear Strength ULS .....                                 | 224        |
| 5.5.3 Beam Resistance to Transverse Forces .....                    | 227        |
| 5.5.4 Beam Deflection SLS .....                                     | 230        |
| 5.5.5 Fabricated Beams .....  | 236        |
| 5.6 Columns.....  | 238        |
| 5.6.1 Axially Loaded Columns .....                                  | 239        |
| 5.6.2 Axially Loaded Columns with Moments from Eccentric Loads..... | 248        |
| 5.6.3 Column Baseplates .....                                       | 253        |
| 5.7 Connections .....   | 255        |
| 5.8 References .....  | 256        |
| <b><i>Index</i></b> .....   | <b>257</b> |
