<i>Preface to the Second Edition</i>	vii
<i>Preface to the First Edition</i>	ix
<i>Abbreviations, Notations and Symbols</i>	xiii

<b>1. General Introduction</b>	<b>1</b>
<b>2. Theory of Finite Groups</b>	<b>5</b>
2.1 A Brief Review of Set Theory	6
Cartesian products	6
Mappings	7
Binary compositions	7
Composition tables	8
2.2 Abstract Groups	8
Preliminaries	8
Cyclic groups	10
Permutation group ( $S_n$ )	12
Groups of symmetry	14
Conjugate elements and classes	18
Subgroups	19
Center of a group	20
Cosets	20
Normal subgroups	22
Factor groups	23
2.3 Homomorphisms	24
Automorphisms	26
Inner and outer automorphisms	27
Group of automorphisms	27
Direct product of groups	28
Semidirect product of groups	29
2.4 Group Representations	30
Invariant subspaces	32
Reducible representations	32
Irreducible representations	34
Unitary representations	36
Schur's lemmas	37
The orthogonality theorem	39
Characters of a representation	41
2.5 Introduction to Continuous Groups	42
Lie groups	43
Lie groups of transformations	44
Infinite continuous groups	45
Generators of a Lie group	45

- 2.6 Applications to Physical Problems 48
  - Permutation group ( $S_n$ ) 48
  - Unitary group ( $SU(n)$ ) 51
  - Symmetry group of a square 55
- 2.7 Summary and Further Reading 59
  - Problems* 60

### **3. Rudiments of Topology and Differential Geometry** **63**

- 3.1 Preliminaries 63
  - Denumerable and countable sets 64
  - Lower and upper bounds 66
  - Neighbourhoods, open and closed sets 66
  - Continuity 68
  - Limit points 69
  - Bolzano-Weierstrass theorem 70
  - Isolated, dense and perfect sets 71
- 3.2 Metric Spaces 72
  - Euclidean space 73
  - Hilbert space 74
  - Distance between sets 74
  - Open and closed spheres 75
  - Equivalence of metric spaces 76
- 3.3 Topological Spaces 76
  - Definition 76
  - Union and intersection of topologies 78
  - Limit points 79
  - Closure of a set 79
  - Interior, exterior and boundary of a set 80
  - Base for a topology 82
  - Housdorff spaces 82
  - Relative topologies 82
- 3.4 Compactness 83
  - Some definitions 83
  - Heine-Borel theorem 84
- 3.5 Connectedness 86
  - Separated sets 86
  - Connected sets 86
  - Connected spaces 87
- 3.6 Homotopy 88
  - Homotopic paths 88
  - Simply connected spaces 90
  - The fundamental group 91
- 3.7 Essentials of Differential Geometry 94
  - Some basic concepts and definitions 94
  - Differentiable manifolds 96
  - Diffeomorphism 98
  - Vector fields 98
  - Differential forms 101
- 3.8 Summary and Further Reading 103
  - Problems* 104

<b>4. Integral Equations, Sturm-Liouville Theory and Green's Functions</b>	<b>107</b>
4.1 Terminology and Definitions 107	
Fredholm integral equations 108	
Volterra integral equations 109	
Differentiation of a function under the integral sign 110	
Relation between differential and integral equations 111	
4.2 Solution of Integral Equations 113	
The Liouville-Neumann series method 113	
The Fredholm method 124	
The Hilbert-Schmidt theory 134	
4.3 Sturm-Liouville Theory 142	
Adjoint differential system 143	
The Sturm-Liouville problems: Eigenvalues and eigenfunctions 145	
4.4 The Green's Functions 148	
Determination of $G(x, t)$ 149	
Connection with inhomogeneous Sturm-Liouville equation 152	
4.5 Applications to Physics Problems 153	
The influence function 154	
The Abel's integral equation 156	
4.6 Summary and Further Reading 158	
<i>Problems</i> 159	
 <b>5. Stochastic Processes and Stochastic Differential Equations</b>	 <b>162</b>
5.1 Random Variable and Distribution Function of Random Variables 163	
Some basic definitions and results 163	
Multidimensional distribution functions 168	
Functions of random variables 171	
The Stieltjes integral 174	
5.2 Numerical Characteristics of Random Variables: Moments of the distribution function 176	
Mathematical expectation 176	
Variance 178	
Covariance and covariance matrix 182	
Characteristic function of random variables 185	
5.3 Stochastic Processes: Markov process 186	
Classification of stochastic processes 187	
Markov processes: Fokker-Planck equation 191	
General theory of continuous (Markov) processes 193	
5.4 Stochastic differential equations: an introduction 199	
5.5 Applications to physical problems 203	
5.6 Summary and further reading 208	
<i>Problems</i> 208	
 <b>6. Methods of Nonlinear Dynamics I: Phase Portraits</b>	 <b>212</b>
6.1 A Brief Survey of Nonlinear Operators and Differential Equations 213	

6.2	Solution of Nonlinear Differential Equations: Existence and Uniqueness Theorems	218
6.3	Critical Point Analysis of Differential Equations	223
	Generalization to the case of $n$ variables	223
	Definitions: linear systems	224
	Definitions (continued): A two dimensional linear system	225
	Further remarks on linear systems	237
6.4	Nonlinear Systems in the Plane	238
	Linearization at a critical point	239
	Volterra-Lotka system	241
	General remarks	244
	<i>Problems</i>	245
<b>7.</b>	<b>Methods of Nonlinear Dynamics II: Stability and Bifurcation</b>	<b>249</b>
7.1	Stability of Critical Points and Liapunov Functions	249
	Stability for non-autonomous systems	249
	Stability for autonomous systems	253
	Liapunov functions	256
	Stability and linear approximation in two dimensions	261
7.2	Limit Cycle	264
7.3	Index of a Critical Point and Bendixson Criterion for Periodic Solutions	268
	Index of a critical point	268
	Bendixson's criterion for periodic solutions	270
7.4	Bifurcation and Structural Stability	273
	Phenomenon of bifurcation	273
	One-dimensional bifurcation	277
	Hopf bifurcation	281
	Structural stability	283
	Chaos and strange attractor	284
7.5	Applications to Physical Problems	287
	Conservative systems	287
	Hamiltonian systems	294
7.6	Summary and Further Reading	297
	<i>Problems</i>	297
<b>8.</b>	<b>Some Nonlinear Differential Equations and their Solutions</b>	<b>300</b>
8.1	Van der Pol Equation	300
	Lienard systems and Van der pol equation	300
	Dependence of the solution on the parameter $\epsilon$	303
	Large parameter behaviour of the solution	304
8.2	Solitary-Wave Solutions of Nonlinear Differential Equations	310
	A brief introduction	310
	Korteweg-de Vries (KdV) equation and its solutions	313
	Some remarks about KdV and modified KdV equations	325

- 8.3 Solitary-Wave Solution of Nonlinear Schrodinger Equation 326
- 8.4 Application to Physical Problems 329  
 Applications of Van der Pol equation 329  
 Applications of KdV and NLS equations 333
- 8.5 Summary and Further Reading 334  
*Problems* 334
- 9. Some Nonlinear Integral Equations and their Solutions 339**
- 9.1 Inverse Scattering Transform Method 339  
 A brief introduction 339  
 Two typical examples of  $u(x)$  342  
 Inverse scattering problem 346  
 Connection with the KdV equation 349
- 9.2 Backlund Transformation and the Solution of KdV Equation 352
- 9.3 The Lax Pair Method 357
- 9.4 Hirota's Method of Bilinear Derivatives 361
- 9.5 Painlevé Property and Painlevé Transcendents 364
- 9.6 Kadomstev-Petviashvili (KP) Equation and its Solutions 367
- 9.7 Solution of Some Nonlinear Integral Equations 368  
 Existence theorems for NL integral equations 368  
 Some representative nonlinear integral equations 370
- 9.8 Summary and Further Reading 376  
*Problems* 377
- 10. Exact Solution of Some Nonlinear Differential Equations 378**
- 10.1 Riccati Equation 378  
 Riccati equation and the linear differential equation of second order 379  
 Solution of the original Riccati equation 381  
 Further remarks on Riccati equation 383
- 10.2 Exact Solution of Some Other NLODEs 385
- 10.3 Nonlinear Diffusion Equations 387  
 Case when  $F(C) = C^n$  388  
 Case when  $F(C) = \exp(C)$  391
- 10.4 Exact Solution of Some Other NLPDEs 392
- 10.5 Applications to Physical Problems 396  
 Classical mechanics 396  
 Quantum mechanics 396  
 Astrophysics 397
- 10.6 Concluding Discussion 399  
*Problems* 400

<b>11. Symmetries of Differential Equations</b>	<b>402</b>
11.1 Symmetry Groups of Differential Equations: An Introduction 402	
Symmetries of algebraic equations 402	
Groups and differential equations 404	
Some basic results and definitions 405	
11.2 Extended Transformations or Prolongations 419	
11.3 Extended Infinitesimal Transformations 425	
Case of one dependent and one independent variables 426	
Case of one dependent and $p$ independent variables 426	
11.4 Invariance of an Ordinary Differential Equation 427	
11.5 Invariance of a Partial Differential Equation 430	
11.6 Symmetry Groups and Conservation Laws 434	
11.7 Noether's Theorem and Lie-Backlund Symmetries 435	
11.8 Summary and Further Reading 440	
Problems 441	
<b>12. Normal Modes in Nonlinear Dynamical Systems</b>	<b>443</b>
12.1 Normal Modes of Linear Systems: A Brief Survey 444	
12.2 Normal Modes of Nonlinear Systems: A Simple Generalization 448	
12.3 Types of Mode Interactions: A Group Theoretic Approach 454	
An overview 454	
Various modes and their interactions 455	
12.4 Bushes of Modes for a Dynamical System 459	
Interactions between modes of an $N$ -particle nonlinear system 454	
Bush of dynamical variables 461	
12.5 Dynamical Bush Equations: Normal Forms Theory 463	
An introduction to normal form theory 463	
Indicator of a resonance 465	
Indicator of resonance for Hamiltonian systems 466	
12.6 Concluding Discussion 469	
<b>Appendix A: Some Numerical Aspects of Nonlinear Dynamical Systems Vis-a-Vis Chaos</b>	<b>470</b>
A1. Introduction 470	
A2. Phase Flow and Maps 471	
A3. Characterization of the Chaotic Motion 478	
A4. Routes to Chaos 486	
A5. Fractals and Hausdorff Dimension 493	
A6. Application to Physical problems 495	
A7. Summary and Further Reading 497	

<b>Appendix B: Differentiation and Integration under the Integral Sign</b>	<b>499</b>
B1. Differentiation 499	
B2. Integration 501	
B3. Alternative Description of Differentiation under the Integral Sign 503	
 <b>Appendix C: Further Remarks on the Existence of Limit Cycles in a Lienard System</b>	 <b>506</b>
 <i>Bibliography</i>	 <b>511</b>
<i>Index</i>	<b>514</b>
