Preface vii

Editors Biography ix

Contributors xi

1. Introduction to Fuel Processing 1

- 1.1. Clean Energy 1
- 1.2. Fuel Cells 2
- 1.3. Fuel Processors 2
- 1.4. Reforming Modes 3
- 1.5. Thermal Integration of the Fuel Processor and Fuel Cell 4
- 1.6. Challenges for Fuel Cells and Fuel Processors 4
- 1.7. Scope of This Book 6
- References 7

2. Fuel Cells 11

- 2.1. Introduction 11
- 2.2. Fuel Cell Fundamentals 14
- 2.3. Fuel Cell Degradation 17
- 2.4. Fuel Cell Operation 18
- 2.5. Fuel Cell Types 20
- References 26

3. Fuels for Fuel Cells 29

- 3.1. Introduction 29
- 3.2. Fossil Fuels 30
- 3.3. Oxygenated Fuels 43
- References 47

4. Steam Reforming for Fuel Cells 49

- 4.1. Routes to Hydrogen 50
- 4.2. Steam Reforming of Natural Gas 50
- 4.3. Steam Reforming of Other Feedstocks 59
- 4.4. Hydrogen Production 62
- 4.5. Conclusions 68
- References 68

5. Catalytic Partial Oxidation 73

- 5.1. Introduction 74
- 5.2. Thermodynamics 75
- 5.3. Reaction Mechanisms and Kinetics 80
- 5.4. Light Hydrocarbons 92
- 5.5. Higher Hydrocarbons 106
- 5.6. Oxygenated Hydrocarbons 116
- 5.7. Future Development and Applications 120
- References 123

6. Oxidative Steam Reforming 129

- 6.1. Introduction 130
- 6.2. Thermodynamics 131
- 6.3. Mechanism 138
- 6.4. Kinetics 144
- 6.5. Catalytic OSR of Hydrocarbons 147
- 6.6. Future Work 179
- References 181

7. Dry (CO₂) Reforming 191

- 7.1. Introduction 192
- 7.2. Thermodynamics 192
- 7.3. Catalysts for Dry Reforming of Methane 194
- 7.4. Reaction Mechanism and Kinetics of Dry Reforming of Methane 204
- 7.5. Dry Reforming of Ethane 207
- 7.6. Dry Reforming of Propane 208
- 7.7. Reforming of Higher Hydrocarbons 210
- 7.8. Dry Reforming of Oxygenated Hydrocarbons 210
- 7.9. Summary 213
- References 214

8. Plasma Reforming for H₂-Rich Synthesis Gas 223

- 8.1. Introduction 224
- 8.2. Types of Plasmas Used in Fuel Processing Applications 225

8.3. Plasma as an Alternative to Traditional Catalysts in Fuel Reforming	231	12.1. Water Gas Shift	363
8.4. Plasma Reforming of Methane	239	12.2. Preferential Oxidation (PrOX)	373
8.5. Plasma Reforming of Liquid Hydrocarbons	242	12.3. Selective Catalytic Methanation of CO (SMET)	390
8.6. Combined Plasma-Catalytic Reforming of Hydrocarbon Fuels into Hydrogen-Rich Synthesis Gas	251	References	399
8.7. Conclusions and Future Trends	254		
References	255	13. Direct Reforming Fuel Cells	409
9. Nonconventional Reforming Methods	261	13.1. Introduction	410
9.1. Scope of the Chapter	261	13.2. Thermodynamics	412
9.2. Decomposition of Hydrocarbons	262	13.3. Benefits of Internal Reforming	412
9.3. Supercritical Reforming	266	13.4. Carbon Formation	415
9.4. Non-catalytic Thermal Reforming in Porous Media	272	13.5. Experimental Studies on Low O/C Operation	419
9.5. Radio Frequency (RF)-Assisted Reforming	276	13.6. Kinetics of Steam Reforming on Nickel-YSZ Anodes	426
9.6. Pre-reforming	277	13.7. Poisons for SOFC Anodes	431
References	280	13.8. Concluding Remarks	442
10. Deactivation of Reforming Catalysts	285	References	443
10.1. Scope of This Chapter	286	14. Reactor Design for Fuel Processing	451
10.2. Introduction – General Mechanisms for Fuel Reforming	286	14.1. Design Requirements of the Fuel Processing Unit	452
10.3. Thermally Induced Deactivation	287	14.2. Design Requirements of WGS Unit	465
10.4. Sulfur Poisoning	290	14.3. Design Requirements of Carbon Monoxide Removal Unit	466
10.5. Coke/Carbon Deposition	299	14.4. Design Requirements of Desulfurization Unit	469
10.6. Kinetics of the Deactivation Processes	306	14.5. Types of Reactors Used in Fuel Processing	470
10.7. Conclusions	309	14.6. Modeling and Design of Fuel Processing Reactors	490
References	310	Acknowledgments	507
11. Desulfurization for Fuel Cells	317	References	507
11.1. Introduction	318	15. Balance of Plant	517
11.2. Scope	319	15.1. Introduction	517
11.3. Gas Phase Desulfurization Upstream of Reformer	320	15.2. Fuel, Air, and Water Management	517
11.4. Liquid Phase Desulfurization Upstream of Reformer	332	15.3. Fuel Injection System	521
11.5. Syngas Desulfurization Downstream of Reformer or Gasifier	342	15.4. Heat Management Systems	522
11.6. Integration of Sulfur Removal	350	15.5. Other Components	523
11.7. Conclusions and Future Directions	351	15.6. Conclusion and Future Directions	525
References	353	References	526
12. Syngas Conditioning	361	Appendix A	527
12.1. Introduction	362	Appendix B	529
		Appendix C	537
		Index	539
