| Preface | xviii |
| Contributors | xix |

I Introduction - Frontiers in Modern Inorganic Synthetic Chemistry 1

| | |
|---|---|
| 1.1. Development of New Synthetic Reactions, Synthetic Routes, Technologies and Associated Basic Scientific Studies | 2 |
| 1.1.1. The Basic Inorganic Compounds | 2 |
| 1.1.2. Inorganics and Materials with Specific Structures | 2 |
| 1.1.3. Inorganics and Materials in Special Aggregate States | 2 |
| 1.1.4. Assembly of High-level Ordered Structures | 3 |
| 1.1.5. Composition, Assembly, and Hybridization of Inorganic Functional Materials | 3 |
| 1.2. Basic Research in Support of Green Synthesis | 3 |
| 1.3. Basic Research on Synthetic and Preparative Routes under Extreme Conditions | 4 |
| 1.4. Biomimetic Synthesis and Applications of Biotechnology in Inorganic Synthesis | 4 |
| 1.5. Rational Synthesis and Molecular Engineering of Inorganic Compounds with Specific Structures and Functions | 5 |

II High-temperature Synthesis 9

| | |
|---|----|
| 2.1. Attainment of High Temperature-Laboratory Furnaces and Related Techniques | 9 |
| 2.1.1. Resistance Furnaces | 9 |
| 2.1.2. Crystal Grower Equipment | 9 |
| 2.1.3. Arc Melting Furnace | 10 |
| 2.1.4. Spark Plasma Sintering | 10 |
| 2.2. Types of High-temperature Synthetic Reactions and Routes | 11 |
| 2.3. High-temperature Solid-State Reaction | 11 |
| 2.3.1. Mechanism and Characters of Solid-state Reaction | 12 |
| 2.3.2. Some Aspects of Synthesis Via Solid-state Reaction | 13 |
| 2.4. Preparation of Rare Earth-containing Materials | 14 |
| 2.4.1. Oxides and Complex Oxides | 14 |
| 2.4.1.1. Preparation of Materials Containing Divalent Rare Earth Ions | 15 |
| 2.4.1.2. Synthesis of Divalent Rare Earth Materials in Air with Defects Produced by Aliovalent Substitution | 15 |
| 2.4.2. Halides | 15 |

| | |
|---|----|
| 2.4.3. Chalcogenides | 16 |
| 2.4.3.1. Sulfides | 16 |
| 2.4.3.2. Oxysulfides | 17 |
| 2.4.4. Pnictides and Oxy pnictides | 17 |
| 2.4.4.1. Nitrides | 17 |
| 2.4.4.2. Oxynitrides | 18 |
| 2.4.4.3. Oxyphosphides and Arsenides | 18 |
| 2.5. Sol-gel Process and Precursors in High-temperature Solid Synthesis | 18 |
| 2.5.1. The Chemistry of Sol-gel Synthesis | 19 |
| 2.5.2. The Precursors in High-temperature Solid-state Synthesis | 22 |
| 2.6. Self-propagating High-temperature Synthesis (SHS) | 24 |
| 2.6.1. General Aspects | 24 |
| 2.6.2. Chemical Classes of SHS Reactions | 24 |
| 2.6.3. SHS Process and its Characterization | 25 |
| 2.6.4. Activation of SHS Processes | 25 |
| 2.7. High-temperature Preparation of Metal Vapors and Active Molecules for Use in Cryosynthesis | 27 |
| 2.7.1. Techniques of Metal Vapor Preparation | 28 |
| 2.7.2. Attainment of HT species | 29 |
| 2.8. High-temperature Electrolysis in Molten Salt System | 31 |
| 2.8.1. Basic of Molten Salt Electrolysis | 31 |
| 2.8.2. Electrochemical Series of Molten Salts | 31 |
| 2.8.3. Anode Effect | 31 |
| 2.8.4. Examples of Molten Salt Electrolysis-Rare Earth Metal Preparation | 32 |
| 2.8.5. Other Applications of Synthesis by Molten Salt Electrolysis | 36 |

Synthesis and Purification at Low Temperature 39

| | |
|---|----|
| 3.1. Attainment and Measurement of Low and Ultralow Temperatures | 39 |
| 3.1.1. Attainment | 39 |
| 3.1.2. Thermometry | 40 |
| 3.2. Vacuum Technique and its Application in Inorganic Synthesis | 40 |
| 3.2.1. Vacuum Attainment | 41 |
| 3.2.2. Vacuum Measurement Principles and Typical Measurement Ranges | 42 |
| 3.2.3. Common Vacuum Equipments in the Laboratory | 43 |
| 3.3. Purification and Separation of Inorganics at Low Temperature | 46 |
| 3.3.1. Low Temperature Fractional Condensation | 46 |
| 3.3.2. Low Temperature Fractional Distillation | 48 |
| 3.3.3. Low Temperature Selective Adsorption | 49 |
| 3.3.4. Low Temperature Chemical Separation | 50 |

- 3.4. The Synthesis of Volatile Inorganic Compounds at Low Temperature 52
- 3.4.1. Synthesis of High-purity AsF_5 52
- 3.4.2. Syntheses of $\text{R}_3\text{SiCo}(\text{CO})_4$ Type Compounds 52
- 3.5. Formation of Rare-gas Molecules at Cryogenic Condition 53
- 3.5.1. Synthesis of $\text{Xe}[\text{PtF}_6]$ at Low Temperature 53
- 3.5.2. Photochemical Synthesis of KrF_2 at Low Temperature 54
- 3.5.3. Synthesis of HXY Molecules by Matrix Photogeneration at Cryogenic Conditions 54
- 3.5.4. First Synthesis of a Stable Argon Compound HArF at Cryogenic Condition 55
- 3.6. Inorganic Synthesis in Liquid Ammonia 56
- 3.6.1. Reactions of Metals with Liquid Ammonia 56
- 3.6.2. Reactions of Nonmetals with Liquid Ammonia 56
- 3.6.3. Ammonolysis of Inorganic Compounds in Liquid Ammonia 57
- 3.6.4. Substitution Reactions in Liquid Ammonia 57
- 3.6.5. Synthesis of $\text{MgCl}_2 \cdot 6\text{NH}_3$ in Liquid Ammonia 57
- 3.7. Cryosynthesis of Unusual Inorganic Compounds 59
- 3.7.1. Types of Cryosynthetic Reactions 59
- 3.7.2. Basic Apparatus for the Synthetic Reactions 60
- + Hydrothermal and Solvothermal Syntheses 63
- 4.1. Foundation of Hydrothermal and Solvothermal Syntheses 63
- 4.1.1. Features of Hydrothermal Synthetic Reactions 63
- 4.1.2. Classification of Hydrothermal Reactions 64
- 4.1.3. Property of Reaction Medium 65
- 4.2. Functional Materials from Hydrothermal and Solvothermal Systems 66
- 4.2.1. Single Crystals 68
- 4.2.2. Zeolites and Related Materials 70
- 4.2.3. Organic–inorganic Hybrid Materials 71
- 4.2.4. Ionic and Electronic Conductors 74
- 4.2.5. Nanomaterials 76
- 4.3. Hydrothermal Biochemistry 78
- 4.3.1. Warm Pond: Hydrothermal Seafloor 78
- 4.3.2. Evolutionary Tree and Time Evidence 78
- 4.3.3. Chemical Ladder: Synthesis and Evolution 79
- 4.3.4. Expectation 80
- 4.4. Supercritical Water—a Novel Reaction System 81
- 4.4.1. Properties of Supercritical Water 81
- 4.4.2. Chemical Applications of Supercritical Water 82
- 4.4.3. Technological Applications of Supercritical Water 83
- 4.5. Techniques and Methods 84
- 4.5.1. Reaction Containers 84
- 4.5.2. Reaction Control Systems 88
- 4.5.3. General Experimental Procedure 88
- 4.5.4. In Situ Characterization Techniques 88
- 4.6. Ionothermal Synthesis 89
- High Pressure Synthesis and Preparation of Inorganic Materials 97
- 5.1. Experimental Methods of Inorganic Synthesis under High Pressure 98
- 5.1.1. High Pressure Apparatus 98
- 5.1.2. Choice of Pressure Transmitting Media 101
- 5.1.3. Pressure Calibration 102
- The Definition of High Pressure 102
- Pressure Unit 103
- Pressure Measurement 103
- 5.1.4. Generation of High-temperature 104
- 5.2. Effects of High Pressure on Basic States of Matters 106
- 5.2.1. Gas under High Pressure 106
- 5.2.2. Solids under High Pressure 107
- 5.2.3. Water under High Pressure 108
- 5.3. Effects of High Pressure on Inorganic Chemical Reactions 110
- 5.3.1. Influence of Pressure on Thermodynamics and Dynamics of Inorganic Reaction 110
- 5.3.2. The Impact of Pressure on Inorganic Reaction 110
- Synthetic Reaction 110
- Addition–elimination Reactions 110
- Electron Transfer Reaction 111
- The Radiation-induced Process 111
- 5.4. Effects of High Pressure on Crystal and Electronic Structures of Inorganic Compounds 111
- 5.4.1. Changes in Crystal Structure at High Pressure 111
- 5.4.2. Electronic Structure Changes under High Pressures 115
- 5.5. Major Roles of High Pressure Method in Inorganic Synthesis 117
- 5.5.1. Preventing the Decomposition of Thermally Unstable Starting Reagents 117
- 5.5.2. Improving the Densification Effect and Consequently to Help the Preparation of Compact Structures 117
- 5.5.3. Decreasing Reaction Temperature and Shortening Reaction Time 118
- 5.5.4. Stabilizing the Highest Oxidation States of Transition Metals Through the Development of High Oxygen or Fluorine Pressure 119
- 5.5.5. Hindering the Disproportionation of Intermediate Oxidation States 119
- 5.5.6. The Synthesis of Light Element Compounds which have Special Physical Properties 119
- 5.5.7. Preparation of Important Amorphous and Quasicrystalline Materials using High Pressure Methods 120
- 5.6. Some Important Inorganic Compounds Synthesized under High Pressure 120
- 5.6.1. Synthesis of Diamond under High Pressure 120
- 5.6.2. Synthesis of Cubic Boron Nitride (*c*-BN) under High-pressure 122
- 5.6.3. High Pressure Synthesis of C_3N_4 123
- 5.6.4. The Synthesis of Superconductors under High Pressure 124
- 5.6.5. The High Pressure Synthesis and Properties of the Compounds Containing Special Oxidation State Transition Metals 125

- 6 Inorganic Photochemical Synthesis 129
- 6.1. The Basic Concepts 129
 - 6.2. Experimental Techniques 131
 - 6.3. Photochemical Synthesis of Organometallic complexes 132
 - 6.3.1. Photosubstitution 132
 - 6.3.2. Photo-isomerization 134
 - 6.3.3. Photosensitized Metal–metal Bond Cleavage Reaction 135
 - 6.3.4. Photo-induced Electron Transfer and Redox Reactions 136
 - 6.4. Photochemical Synthesis of Inorganic Compounds 136
 - 6.4.1. Photochemical Synthesis Via Photosensitization 136
 - 6.4.2. Photochemical Synthesis of Boranes and their Derivatives 137
 - 6.4.3. Synthesis of Chlorine Gas Via Photolysis 137
 - 6.4.4. Photochemical Synthesis of Fluorides 137
 - 6.5. Synthesis of Inorganic Thin Films Via Photochemical Reactions 138
 - 6.5.1. Laser-assisted Thin Film Formation of Inorganic Materials 138
 - 6.5.2. Film Formation Via Solution Photochemical Deposition 141
 - 6.6. Photochemical Synthesis of Nanomaterials 142
 - 6.7. Production of H₂ Via Photodecomposition of Water 143
 - 6.8. Summary 145
- 7 CVD and its Related Theories in Inorganic Synthesis and Materials Preparations 151
- 7.1. Brief History of Chemical Vapor Deposition 151
 - 7.2. Technical Fundamentals of CVD 152
 - 7.2.1. Simple Pyrolysis Reactions 153
 - 7.2.2. Reduction–oxidation Depositions 154
 - 7.2.3. Deposition Through Synthetic Reactions 154
 - 7.2.4. Deposition Through Chemical Mass Transportation 154
 - 7.2.5. Plasma-enhanced Chemical Vapor Deposition (PECVD or PCVD) 155
 - 7.2.6. Atomic Layer Chemical Vapor Deposition (ALCVD or ALD) 155
 - 7.2.7. Enhanced Deposition by Other Energy Resources 155
 - 7.3. Equipment of Chemical Vapor Deposition 156
 - 7.3.1. Equipment for Manufacture of Ultrapure Semiconductor Poly-Si 156
 - 7.3.2. Equipment for Silicon Epitaxy and Poly-Si Film Deposition 156
 - 7.3.3. Equipment of Hot Wall LPCVD 156
 - 7.3.4. Equipment of Plasma-enhanced CVD (PECVD) 157
 - 7.3.5. Equipment of Atomic Layer Deposition (ALD) 158
 - 7.3.6. Equipment of Tracklayer APCVD 158
 - 7.3.7. Equipment of Barrel CVD Reactor 159
 - 7.3.8. Equipment of Gallium Arsenide (GaAs) Epitaxial Growth 159
 - 7.4. Some Theoretical Models of CVD Technology 159
 - 7.4.1. The Simple CVD Kinetic Model 159
 - 7.4.2. LPCVD Simulation Model 161
 - 7.4.3. Thermodynamic Coupling Model of Activated Low-pressure CVD Diamond Synthesis 163
 - 7.5. Thermodynamic Coupling During the Low-pressure CVD Diamond Growth 166
 - 7.5.1. Key Points of Thermodynamic Coupling Model in Modern Thermodynamics 166
 - 7.5.2. Mechanism of Thermodynamic Coupling 166
 - 7.6. Nonequilibrium Phase Diagrams for the Low-pressure CVD Diamond Growth 167
- 8 Microwave-assisted Inorganic Syntheses 173
- 8.1. Basic Principle of Microwave Radiation, Microwave Heating, and Microwave Equipment 173
 - 8.1.1. Basic Principle of Microwave Radiation and Microwave Heating 173
 - 8.1.2. Microwave Equipment 175
 - 8.2. Synthesis of Inorganic Materials under Microwave Heating 176
 - 8.2.1. Reactions in Liquid Media 176
 - 8.2.1.1. Microwave-assisted Hydrothermal Synthesis: porous Materials 176
 - 8.2.1.2. Microwave-assisted Sol–gel Synthesis 181
 - 8.2.1.3. Microwave-assisted Crystallization 182
 - 8.2.1.4. Microwave-assisted Synthesis of Nanomaterials 183
 - 8.2.2. Solid-state Reactions 185
 - 8.2.2.1. Microwave-assisted Solid-state Synthesis 186
 - 8.2.2.2. Microwave-assisted Processing of Ceramics 186
 - 8.2.2.3. Microwave-assisted Processing of Glass Forming 189
 - 8.2.2.4. Microwave-assisted Self-propagating High-temperature Synthesis (SHS) 189
 - 8.2.2.5. Microwave-assisted Solid–gas Synthesis 189
 - 8.3. Synthesis of Inorganic Materials Assisted with different Microwave Frequencies 190
 - 8.4. Plasma-assisted Synthesis of Inorganic Materials 190
 - 8.5. Some of the Basic Conclusions and Outlooks about Microwave Radiation Associated Chemistry 192
- 9 Syntheses of Coordination Compounds 197
- 9.1. Direct Synthesis Method 197
 - 9.1.1. Direct Coordination Reaction 197
 - 9.1.2. Precursor-induced Complexation 198
 - 9.1.3. Metal Vapor Synthesis and Matrix Isolation Method 198
 - 9.2. Component Exchange Method 199
 - 9.2.1. Metal Exchange 199
 - 9.2.2. Ligand Substitution 200
 - 9.2.3. Subcomponent Exchange 200
 - 9.3. Redox Interaction Method 200
 - 9.3.1. Oxidation of Element Metals 200
 - 9.3.2. Oxidation of Low-valent Metals 201
 - 9.3.3. Reduction of High-valent Metals 201
 - 9.3.4. Middle-valent Metals 201
 - 9.3.5. Electrochemical Synthesis 201
 - 9.3.6. Redox under High Pressure 202

- 9.4. Solid-state Synthesis Method 202
 - 9.4.1. Complexation of Ligands with Metal Precursors 202
 - 9.4.2. Decomposition of Metal Precursors 202
- 9.5. Inclusion Complexation Method 203
 - 9.5.1. Layered Inclusion Compounds 203
 - 9.5.2. Multinuclear Compound and Metal Cluster-induced Inclusion Complexation 203
- 9.6. Macrocyclic Template Method 204

Assembly Chemistry of Coordination Polymers 207

- 10.1. Molecular Design of Coordination Polymers 209
 - 10.1.1. Single-metal Noded Nets 209
 - 10.1.2. Metal-cluster Noded Nets 211
 - 10.1.3. Pillared-layer Nets 213
- 10.2. Structural Modulation by Reaction Conditions 214
 - 10.2.1. Temperature Effect 215
 - 10.2.2. pH Effect 218
 - 10.2.3. Template and Additive Effect 219
 - 10.2.4. Solvent Effect 220
 - 10.2.5. Counter-ion Effect 221
- 10.3. In Situ Metal/Ligand Reactions 221
 - 10.3.1. In Situ Metal Redox Reactions 222
 - 10.3.2. In Situ Ligand Formation 222

Synthetic Chemistry of Cluster Compounds 227

- 11.1. Description of the Clusters 227
 - 11.1.1. Definition of a Cluster and the Clusters 227
 - 11.1.2. Classification of the Clusters 227
 - 11.1.3. The Oxo Clusters and Chalcogenide Clusters 227
- 11.2. Synthesis of the Oxo TM Clusters under Hydrothermal Conditions 228
 - 11.2.1. Substituted Synthesis on Polyoxometalate (POM) Cages 228
 - 11.2.2. Lacunary Directing Synthesis Via the Lacunary Sites of POM Fragments 229
 - 11.2.3. Synergistic Directing Synthesis Via Two or More Lacunary XW_9 Fragments 231
 - 11.2.4. Designed Synthesis Via the Peripheral Substitution of Ni_6PW_9 SBUs 234
- 11.3. Synthesis of the Oxo Lanthanide Clusters under Hydrothermal Conditions 236
 - 11.3.1. Induced Synthesis Via the Ligands 236
 - 11.3.2. Synergistic coordination Between the First and Secondary Ligands 237
- 11.4. Synthesis of the Oxo Main Group Clusters under Hydrothermal Conditions 238
 - 11.4.1. Templated Synthesis of Borates 238
 - 11.4.2. Templated Synthesis of Germanates and Borogermanates 241
 - 11.4.3. Self-polymerization and Induced Congregation of Lanthanide Germanate Clusters 243
- 11.5. Synthesis of the Chalcogenide Clusters under Hydro(solvo)thermal Conditions 243
 - 11.5.1. Tetrahedral Clusters 243
 - 11.5.2. T_n Clusters 244

- 11.5.3. P_n Clusters 245
- 11.5.4. C_n Clusters 245
- 11.5.5. Other Types of Surpertetrahedral Clusters 245
- 11.5.6. Open-framework Chalcogenides made from Different Tetrahedral Clusters 245
- 11.5.7. Open-framework Chalcogenides Based on Tetrahedral Clusters and Organic Linkers 246

Synthetic Chemistry of Fullerenes 249

- 12.1. Synthesis 249
 - 12.1.1. Resistive Heating and Arc-Discharge of Graphite 249
 - 12.1.2. Laser Vaporization 249
 - 12.1.3. Solar Generation 250
 - 12.1.4. Combustion Synthesis 250
 - 12.1.5. Thermal Pyrolysis 251
 - 12.1.6. Plasma Synthesis 251
 - 12.1.7. Chemical Synthesis 251
- 12.2. Characterization of Fullerenes 252
- 12.3. Chemical Reactions 253
 - 12.3.1. Buckminsterfullerene C_{60} 255
 - 12.3.1.1. Reduction 255
 - 12.3.1.2. Cycloaddition 256
 - 12.3.1.3. Nucleophilic Addition 257
 - 12.3.1.4. Radical Addition 257
 - 12.3.1.5. Oxidation 258
 - 12.3.1.6. Hydrogenation 258
 - 12.3.1.7. Halogenation 258
 - 12.3.1.8. Organometallic Complex 259
 - 12.3.2. Endofullerenes 260
 - 12.3.2.1. Cycloaddition 260
 - 12.3.2.2. Carbene Reaction 261
 - 12.3.2.3. Bingel–hirsch Reaction 261
 - 12.3.2.4. Radical Reaction 262
 - 12.3.2.5. Hydroxylation 262

Synthesis of Organometallic Compounds 269

- 13.1. Synthetic Reactions 270
 - 13.1.1. Ligand Substitution 270
 - Associative Substitution 270
 - Dissociative Substitution 270
 - Interchange Type 271
 - 13.1.2. Oxidative Addition and Reductive Elimination 271
 - Oxidative Addition 271
 - Reductive Elimination 273
 - 13.1.3. Insertion and Elimination 273
 - 1,1-Insertion 274
 - 1,2-Insertion 274
 - α , β , γ , δ Eliminations 275
 - 13.1.4. Nucleophilic and Electrophilic Attacks on Coordinated Ligands 276
 - Nucleophilic Addition 276
 - Nucleophilic Abstraction 277
 - Electrophilic Addition 278
 - Electrophilic Abstraction 278
 - 13.1.5. Reactions of Metal Vapors with Ligands or Ligand Precursors 279

- 13.2. Preparation of Typical Organometallic Compounds 279
- 13.2.1. Metal Carbonyls 279
- 13.2.2. Complexes with M–C σ Bonds 281
- 13.2.3. Complexes with M–C Multiple Bonds 282
- Carbenes 282
- Carbynes 284
- 13.2.4. Metal Hydrides 286
- 13.2.5. π Complexes 287
- Olefin and Acetylene Complexes 287
- Cyclopentadienyl and Arene Complexes 288
- Allylic and Polyene Complexes 288
- 13.3. Experimental Techniques 289
- 14 Synthesis and Assembly Chemistry of Inorganic Polymers 295
- 14.1. Polyphosphazenes 295
- 14.2. Synthesis and Assembly Chemistry of Cyclophosphazene 296
- 14.2.1. In Situ Template Method 296
- 14.2.2. Self-assembly of Primary Particles 297
- 14.2.3. In Situ Skeleton Convert Technique 297
- 14.2.4. Surface Polymerization on the Nano- or Microparticles 299
- 14.3. Applications of Cyclomatrix Polyphosphazenes 301
- 14.3.1. Biomedical Phosphazenes 301
- 14.3.1.1. Micro-crosslinked Polyphosphazenes 302
- 14.3.1.2. Star-shaped Polyphosphazenes 305
- 14.3.1.3. Penta-armed Polyphosphazenes 306
- 14.3.2. Polyphosphazenes with Nonlinear Optical Properties 307
- 14.3.3. Phosphazene Separation Membranes 308
- 14.3.4. Phosphazenes Modified Polyurethane 310
- 14.3.4.1. Phosphazene Oligomer as Chain Extenders 310
- 14.3.4.2. Phosphazenes Oligomer as Chain Crosslinkers 311
- 14.3.4.3. Phosphazene Oligomers as Polyols 311
- 14.3.5. Phosphazene Solid Polymer Electrolytes 311
- 14.3.5.1. Polyphosphazene Microspheres Incorporated in PEO-based Solid Composite Polymer Electrolytes 312
- 14.3.5.2. PEO-based Solid Composite Polymer Electrolytes with Inorganic–organic Hybrid Polyphosphazene Nanotubes as Fillers 313
- 14.4. Silicones 314
- 14.4.1. Polysiloxanes and Polysilane 315
- 14.4.2. Polysilaethers Bearing Si–H Bond 316
- 15 Synthetic Chemistry of Nonstoichiometric Compounds 321
- 15.1. Nonstoichiometric Compounds 322
- 15.1.1. Definition of Nonstoichiometric Compounds 322
- 15.1.2. Classification of Nonstoichiometric Compounds 323
- 15.1.3. Point Defects in the Nonstoichiometric Compounds 323
- 15.2. Preparation of Nonstoichiometric Compounds 324
- 15.2.1. Formation Mechanism of Nonstoichiometric Compounds 324
- 15.2.2. Synthesis Condition of Nonstoichiometric Compounds 327
- 15.2.3. Synthesis of Nonstoichiometric Compound 328
- 15.2.3.1. High-Temperature Solid-State Reaction Method 329
- 15.2.3.2. High-Temperature Thermal Decomposition Method 331
- 15.2.3.3. High-Temperature and High-Pressure Synthesis Method 333
- 15.2.3.4. γ -Irradiation Synthesis Method 335
- 15.3. Characterization of Nonstoichiometric Compounds 335
- 15.3.1. Composition Analysis 335
- 15.3.2. Structure Determination 336
- 15.3.3. Defect Detection 336
- 16 Synthetic Chemistry of the Inorganic Ordered Porous Materials 339
- 16.1. Porous Materials 339
- 16.2. Zeolite and its Structure 340
- 16.2.1. Basic Structural Unit of the Zeolite 340
- 16.2.2. Framework Structure of Zeolite and Molecular Sieve 341
- 16.2.3. Intergrowth in Zeolite 342
- 16.2.4. The Composition of Zeolite and Molecular Sieve 342
- 16.3. The Synthesis of Zeolite 342
- 16.3.1. Hydrothermal Zeolite Synthesis 342
- 16.3.2. Zeolite Crystallization and Formation Mechanism 343
- Studies on Synthesis Mechanism 343
- Templating 344
- 16.3.3. Optimization of Zeolite Synthesis 345
- 16.4. Zeotype: Zeolite-like Materials 346
- 16.4.1. The Pure Silica Molecular Sieves and Clathrasil Compounds 346
- 16.4.2. Aluminophosphate and Other Phosphate Molecular Sieves 346
- 16.4.3. Metal-organic Frameworks (MOFs) 346
- 16.4.4. Open-framework Chalcogenides 347
- 16.4.5. Organic–inorganic Hybrid Zeolite and Microporous AlPO 347
- 16.5. New Strategies and New Trends of Zeolite Synthesis 348
- 16.5.1. Ultralarge-pore Zeolites and Zeolite-like Materials 348
- 16.5.2. Large Crystal 348
- 16.5.3. Nanocrystal 349
- 16.5.4. Phase Transition 349
- 16.5.5. Nonaqueous Synthesis: Solvothermal, Ionothermal, and Dry Gel Systems 349
- 16.5.6. Mesoporous Zeolites 350
- 16.5.7. F^- as Mineralizer 350
- 16.5.8. Synthesis Challenges from new Pentasil Zeolite Minerals 351
- 16.6. Basic of Ordered Mesoporous Materials 351
- 16.7. Understanding the Synthesis of Mesoporous Materials 352
- 16.7.1. Synthetic System 352

- 16.7.2. Formation Mechanism of Mesostructure: Liquid Crystal Template and Cooperative Self-assembly 352
- 16.7.3. Interaction Between Organic Template and Inorganic Species 353
