Chapter 3	Flexu	ral Analysis and Design of Beams	67
onaproi o	3.1	Introduction	67
	3.2	Bending of Homogeneous Beams	67
	3.3	Reinforced Concrete Beam Behavior	69
	3.4	Design of Tension-Reinforced Rectangular Beams	80
	3.5	Design Aids	94
	3.6	Practical Considerations in the Design of Beams	97
	3.7	Rectangular Beams with Tension and Compression	
		Reinforcement	99
	3.8	T Beams	108
		References	115
		Problems	116
Chapter 4	Shear	r and Diagonal Tension in Beams	120
Chapter 4	4.1	Introduction	120
	4.2	Diagonal Tension in Homogeneous Elastic Beams	121
	4.3	Reinforced Concrete Beams without Shear	
	7.5	Reinforcement	124
	4.4	Reinforced Concrete Beams with Web Reinforcement	131
	4.5	ACI Code Provisions for Shear Design	136
	4.6	Effect of Axial Forces	145
	4.7	Beams with Varying Depth	150
	4.8	Alternative Models for Shear Analysis and Design	151
	4.9	Shear-Friction Design Method	160
		References	164
		Problems	166
Chantar 5	Pand	l, Anchorage, and Development Length	168
Chapter 5	5.1	Fundamentals of Flexural Bond	168
	5.2	Bond Strength and Development Length	172
	5.3	ACI Code Provisions for Development	1/2
	, 3.3	of Tension Reinforcement	177
	5.4	Anchorage of Tension Bars by Hooks	181
	5.5	Anchorage in Tension Using Headed Bars	185
	5.6	Anchorage Requirements for Web Reinforcement	189
	5.7	Welded Wire Reinforcement	190
	5.8	Development of Bars in Compression	191
	5.9	Bundled Bars	191
	5.10	Bar Cutoff and Bend Points in Beams	192
	5.11	Structural Integrity Provisions	199
	5.12	Integrated Beam Design Example	200
	5.13	Bar Splices	204
		References	207
		Problems	208
Chapter 6	Servi	iceability	213
Jap (0)	6.1	Introduction	213
	6.2	Cracking in Flexural Members	213

	6.3	ACI Code Provisions for Crack Control	216
	6.4	Control of Deflections	219
	6.5	Immediate Deflections	220
	6.6	Deflections Due to Long-Term Loads	223
	6.7	ACI Code Provisions For Control of Deflections	226
	6.8	Deflections Due to Shrinkage and	
		Temperature Changes	232
	6.9	Moment vs. Curvature for Reinforced	
		Concrete Sections	234
		References	238
		Problems	238
Chapter 7	Anal	ysis and Design for Torsion	241
Chapter 7	7.1	Introduction	241
	7.2	Torsion in Plain Concrete Members	242
	7.3	Torsion in Reinforced Concrete Members	245
	7.4	Torsion Plus Shear	249
	7.5	ACI Code Provisions for Torsion Design	250
	7.5	References	258
		Problems	259
Chapter 8	Shor	t Columns	262
•	8.1	Introduction: Axial Compression	262
	8.2	Lateral Ties and Spirals	265
	8.3	Compression Plus Bending of Rectangular Columns	269
	8.4	Strain Compatibility Analysis and Interaction	
		Diagrams	270
1	8.5	Balanced Failure	273
	8.6	Distributed Reinforcement	276
	8.7	Unsymmetrical Reinforcement	278
	8.8	Circular Columns	279
	8.9	ACI Code Provisions for Column Design	281
	8.10	Design Aids	282
	8.11	Biaxial Bending	285
	8.12	Load Contour Method	287
	8.13	Reciprocal Load Method	288
	8.14	Computer Analysis for Biaxial Bending of Columns	291
	8.15	Bar Splicing in Columns	292
	8.16	Transmission of Column Loads Through Floor Systems	293
		References	294
		Problems	295
Chapter 9	Slan	der Columns	299
Chapter 9	9.1	Introduction	299
	9.1	Concentrically Loaded Columns	300
	9.2	Compression Plus Bending	303
	9.3 9.4	ACI Criteria for Slenderness Effects in Columns	309
	9. <del>4</del> 9.5	ACI Criteria for Nonsway vs. Sway Structures	310
	1.5	1.0. Citora to I tolonaj to briaj balaciato	J. V

	<ul> <li>9.6 ACI Moment Magnifier Method for Nonsway</li> <li>9.7 ACI Moment Magnifier Method for Sway Fra</li> <li>9.8 Second-Order Analysis for Slenderness Effect References</li> <li>Problems</li> </ul>	mes 320
Chapter 10	Strut-and-Tie Models 10.1 Introduction 10.2 Development of Strut-and-Tie Models 10.3 Strut-and-Tie Design Methodology 10.4 ACI Provisions for Strut-and-Tie Models 10.5 Applications References Problems	332 332 336 342 347 356 356
Chapter 11	Design of Reinforcement at Joints 11.1 Introduction 11.2 Beam-Column Joints 11.3 Strut-and-Tie Model for Joint Behavior 11.4 Beam-to-Girder Joints 11.5 Ledge Girders 11.6 Corners and T Joints 11.7 Brackets and Corbels References Problems	358 358 359 371 373 374 377 380 384 385
Chapter 12	Analysis of Indeterminate Beams and Frantiz. 1  12.1 Continuity 12.2 Loading 12.3 Simplifications in Frame Analysis 12.4 Methods for Elastic Analysis 12.5 Idealization of the Structure 12.6 Preliminary Design and Guidelines for Proportioning Members 12.7 Approximate Analysis 12.8 ACI Moment Coefficients 12.9 Limit Analysis 12.10 Conclusion References Problems	387 387 389 391 393 394 399 401 406 409 420 421 421
Chapter 13	Analysis and Design of Slabs 13.1 Types of Slabs 13.2 Design of One-Way Slabs 13.3 Temperature and Shrinkage Reinforcement 13.4 Behavior of Two-Way Edge-Supported Slabs 13.5 Two-Way Column-Supported Slabs	<b>424</b> 424 426 429 432 436

13.6   Direct Design Method for Column-Supported Slabs   13.7   Flexural Reinforcement for Column-Supported Slabs   445   13.8   Depth Limitations of the ACI Code   447   13.9   Equivalent Frame Method   454   13.10   Shear Design in Flat Plates and Flat Slabs   462   13.11   Transfer of Moments at Columns   477   13.12   Openings in Slabs   480   13.13   Deflection Calculations   482   480   13.13   Deflection Calculations   482   489   References   490   Problems   492   492    Chapter 14   Yield Line Analysis for Slabs   497   49			Contents	хi
