# Contents

|   |          |
|---|----------|
| <i>Contributors</i>   | xiii     |
| <i>Preface</i>  | xix      |
| <b>Part I: Hematopoietic Stem Cells (HSCs)</b>  | <b>1</b> |
| 1 Hematopoietic Stem and Progenitor Cells in Umbilical Cord Blood<br><i>Claudia Lengerke and Suzanne Kadereit</i> | 3        |
| Introduction  | 4        |
| Frequency of HSCs in UCB  | 5        |
| <i>In Vitro</i> Colony Assays   | 6        |
| <i>In Vivo</i> Xenogeneic Mouse Models  | 7        |
| Phenotyping the Human HSC   | 9        |
| Specifics of UCB-Derived HSCs   | 11       |
| Homing and Engraftment  | 12       |
| HSC Differentiation and Self-Renewal  | 14       |
| Conclusions   | 16       |
| 2 Cord Blood and Cancer<br><i>Mary J. Laughlin and R. Patrick Weitzel</i>   | 27       |
| Introduction  | 28       |
| History of Cord Blood Transplantation   | 28       |

|   |   |    |
|---|---|----|
|   | Advantages of Cord Blood as a Source of Allogeneic Stem Cells   | 29 |
|   | Clinical Trials to Date — Pediatric Recipients  | 32 |
|   | Clinical Trials to Date — Adult Recipients  | 35 |
|   | Double UCB Transplantation  | 37 |
|   | Non-Myeloablative UCB Transplantation in Adults   | 38 |
|   | Cellular and Molecular Observations Underlying Clinical Advantages  | 39 |
|   | Current Indications   | 41 |
|   | Summary and Conclusions   | 43 |
| 3 | Self-Renewal of Primitive Hematopoietic Cells: A Focus on Asymmetric Cell Division<br><i>Andre Görgens and Bernd Giebel</i> | 51 |
|   | Introduction  | 51 |
|   | Principal Mechanisms for Controlling the Decision “Self-Renewal Versus Differentiation” of Somatic Stem Cells               | 53 |
|   | Stem Cell Niches and Asymmetric Cell Division are Not Mutually Exclusive  | 57 |
|   | The Hematopoietic Stem Cell Compartment   | 58 |
|   | Asymmetric Cell Division of Primitive Hematopoietic Cells   | 59 |
| 4 | <i>Ex Vivo</i> Expansion of Cord Blood Hematopoietic Cells<br><i>Ian K. McNiece</i>   | 77 |
|   | Introduction  | 78 |
|   | <i>Ex Vivo</i> Expanded Cells Provide Rapid Engraftment   | 79 |
|   | Immunomagnetic Selection of UCB Products for <i>Ex Vivo</i> Expansion   | 79 |
|   | Availability of Clinical Grade Reagents   | 81 |
|   | Clinical Experience with <i>Ex Vivo</i> Expanded Cells  | 81 |
|   | Summary   | 85 |

|   |            |
|---|------------|
| <b>Part II Mesenchymal Stem Cells (MSCs)</b>  | <b>89</b>  |
| <b>5 Mesenchymal Stem Cells</b>   | <b>91</b>  |
| <i>Mark F. Pittenger</i>  |            |
| Introduction  | 92         |
| Tissue Repair and Regeneration  | 92         |
| MSCs Across Species and Tissues   | 93         |
| Characterization of MSCs  | 95         |
| Functional Characteristics of MSCs  | 97         |
| Umbilical Cord MSCs   | 97         |
| <b>6 Bone Tissue Engineering</b>  | <b>105</b> |
| <i>Johannes C. Reichert, Travis J. Klein, Kunnika Kuaha,<br/>Bart Rijckaert, Ulrich Nöth and Dietmar W. Hutmacher</i> |            |
| Introduction  | 106        |
| Bone Structure and Osteogenesis   | 107        |
| Bone Marrow Stromal and Human Umbilical Cord<br>Perivascular Cells for Bone Tissue Engineering                        | 109        |
| Bone Tissue Engineering   | 120        |
| Bioreactors   | 122        |
| Clinical Bone Engineering   | 124        |
| Conclusion  | 130        |
| <b>7 Neural Differentiation of Umbilical Cord Blood Derived<br/>Cells and Applications in Neurological Disorders</b>  | <b>145</b> |
| <i>Gerald Udolph</i>  |            |
| Introduction  | 145        |
| How It All Began: <i>In Vitro</i> Differentiation Into the<br>Neural Lineage of Bone Marrow Mesenchymal Cells         | 146        |
| <i>In Vitro</i> Differentiation of Human Cord Blood Derived<br>Cell Types Into the Neural Lineage                     | 147        |
| Is Neural Differentiation of Cord Blood Cells an Artifact?  | 153        |
