

ORCHID BIOTECHNOLOGY II

Edited by

Wen-Huei Chen and Hong-Hwa Chen

 **World Scientific**

Contents

Foreword	v
Preface	vii
1. Molecular Phylogeny and Biogeography of <i>Phalaenopsis</i> Species	1
1.1 Introduction	1
1.2 Biogeographical Pattern of Genus <i>Phalaenopsis</i> . .	6
1.3 Molecular Phylogeny and Biogeography of the <i>Phalaenopsis</i> Species	8
1.3.1 Phylogenetics and biogeography of the genus <i>Phalaenopsis</i>	8
1.3.1.1 Molecular phylogenetics of <i>Phalaenopsis</i>	9
1.3.1.2 Biogeography	13
1.3.2 Phylogenetics and biogeography of the <i>Phalaenopsis amabilis</i> complex	14
1.3.3 Phylogenetics and biogeography of the <i>Phalaenopsis sumatrana</i> complex	16
1.3.3.1 Molecular phylogenetics	17
1.3.3.2 Biogeography and evolutionary trends	18
1.3.4 Phylogenetics and biogeography of the <i>Phalaenopsis violacea</i> complex	19
1.3.5 Phylogenetics, biogeography and evolutionary trends of the <i>Phalaenopsis</i> <i>lueddemanniana</i> complex	20
References	22

2. Endopolyploidy in <i>Phalaenopsis</i> Orchids and Its Application in Polyploid Breeding	25
2.1 Introduction	26
2.1.1 Endopolyploidy and its occurrence in plants	26
2.1.2 Endopolyploidy in orchid species	27
2.1.3 Polyploidy in orchids and its significance in variety improvement	27
2.2 Endopolyploidy in <i>Phalaenopsis</i>	28
2.2.1 Endopolyploidy in ovule and seed development	28
2.2.2 Endopolyploidy in different tissues at different stages of plant development	30
2.3 Production of Polyploid Plants through Endopolyploidy in <i>Phalaenopsis</i>	32
2.3.1 Previous research on spontaneous chromosome doubling through tissue culture	32
2.3.2 Production of polyploid plants by excision of protocorms or protocorm-like bodies (PLBs)	32
2.3.3 Performance of polyploidy plants developed from protocorm-like bodies	33
2.4 Polyploid Breeding in <i>Phalaenopsis</i>	38
2.4.1 Major problems in the breeding of <i>Phalaenopsis</i> orchids	38
2.4.2 Chromosome doubling as a means of solution	39
2.4.3 Comprehensive polyploid breeding program for <i>Phalaenopsis</i> orchids	41
2.4.3.1 A database for the nuclear DNA content of <i>Phalaenopsis</i> species	41

2.4.3.2	A conversion program of diploid <i>Phalaenopsis</i> species to tetraploid	42
2.4.3.3	Extension and utilization of polyploid germplasm	43
2.5	Conclusion and Prospects	44
	References	45
3.	Growth Responses and Changes of Active Components as Influenced by Elevations and Orchid Mycorrhizae on <i>Anoectochilus Formosanus</i> Hayata	49
3.1	Introduction	50
3.1.1	The medicinal effect of <i>A. formosanus</i>	50
3.1.2	The propagation of <i>A. formosanus</i>	50
3.1.3	PBCM combined with the inoculation of OMF	51
3.2	Results	52
3.2.1	Plastic bag cultivation method (PBCM)	52
3.2.2	Inoculation of OMF for the cultivation of <i>A. formosanus</i>	53
3.2.3	Analysis of the antioxidant capacity	56
3.2.3.1	Comparison and analysis of phenolic compounds	56
3.2.3.2	Test of Trolox equivalent antioxidant capacity	57
3.2.4	Analysis of the hepatoprotective components	60
3.3	Conclusions	61
	References	62
4.	A Practical Method for Monitoring the Fertility of Sphagnum Moss During <i>Phalaenopsis</i> Cultivation	65
4.1	Introduction	66
4.2	Validation of the Pour-through Method for <i>Phalaenopsis</i> Cultivation with Sphagnum Moss	67

4.3	Establishment of a Standard Pour-through Procedure for Fertility Monitoring of Sphagnum Moss	71
4.4	Practical Application and Some Considerations	77
4.5	Discussion	80
4.6	Conclusion and Perspectives	82
	References	83
5.	Compositional Variation in the Polysaccharides of the Pseudobulb of <i>Oncidium</i> Gower Ramsey During Different Stages of Inflorescence Development	85
5.1	Introduction	85
5.2	Biochemical Characterization of Polysaccharides in the Pseudobulb	88
5.2.1	Extraction of polysaccharide components at various growth stages of the pseudobulb	88
5.2.1.1	Extraction of mannans	88
5.2.1.2	Extraction of pectins	88
5.2.1.3	Polysaccharide hydrolysis procedures and high performance anion exchange chromatography with pulsed amperometric detection (HPAEC-PAD) analysis	89
5.2.2	Mannan and pectin profiles in different developmental stages of the pseudobulb	90
5.3	Conclusions	97
5.4	Future Prospects	98
	References	98
6.	Coloration and Color Patterning in Floral Tissues of <i>Oncidium</i> Gower Ramsey	101
6.1	Introduction	101
6.2	Color Pattern in Floral Tissues of <i>Oncidium</i> Hybrid	104

6.2.1	HPLC analysis of anthocyanin in <i>Oncidium</i> floral tissues	104
6.2.2	Gene expression pattern of anthocyanin biosynthesis	105
6.2.3	Regulatory analysis of anthocyanin biosynthesis	109
6.3	Conclusion	112
	References	113
7.	Qualitative and Quantitative Analysis of Pigments in <i>Phalaenopsis</i> Species	117
7.1	Introduction	117
7.2	Constituents of the <i>Phalaenopsis</i> Species	118
7.2.1	Anthocyanins	118
7.2.2	Flavonoids	122
7.2.3	Others	122
7.2.4	The bioactivity of pigments from <i>Phalaenopsis</i> species and their application	123
7.3	Quantification of Pigments in <i>Phalaenopsis</i> Species	124
7.3.1	Analysis of native <i>Phalaenopsis</i> species	124
7.3.2	Analysis of <i>Phalaenopsis</i> cultivars	124
7.4	Conclusions and Future Prospects	126
	References	127
8.	Biosynthetic Pathway of Pigments in <i>Phalaenopsis</i> Species	129
8.1	Introduction	129
8.2	Common Biosynthetic Pathway of Anthocyanins	130
8.2.1	Phenylpropanoid metabolism leading to flavonoids and anthocyanins	130
8.2.2	Colors of different anthocyanins	132
8.2.3	Stabilization of anthocyanins	135

8.3	Biosynthesis of Anthocyanins in <i>Phalaenopsis</i> Species	135
8.3.1	Role of glucosyltransferase (GT) in anthocyanin formation	135
8.3.2	Genes involved in color formation in plants	136
8.3.3	Expression of UFGT genes in <i>Phalaenopsis</i> species	138
8.3.4	Proposed pathway for the pigments in <i>Phalaenopsis</i> species	139
8.4	Conclusions and Future Prospects	140
	References	141
9.	Biosynthetic Regulation of Floral Scent in <i>Phalaenopsis</i>	145
9.1	Introduction	146
9.1.1	Significance of the floral/orchid scent	146
9.1.2	Floral scent of <i>Phalaenopsis</i>	147
9.1.3	Difficulty of orchid scent research	149
9.1.4	Reasons for studying <i>P. bellina</i>	150
9.2	Scent Biosynthesis Pathway	152
9.2.1	Strategy to isolate scent biosynthesis pathway in <i>P. bellina</i>	152
9.2.2	Scent biosynthesis pathway and related pathway	155
	9.2.2.1 Scent biosynthesis pathway	155
	9.2.2.2 Scent related gene	155
9.2.3	Critical enzyme for scent biosynthesis	160
9.3	Characterization and Significance of Geranyl Diphosphate Synthase Gene in <i>Phalaenopsis</i>	160
9.3.1	The role of PbGDPS	162
	9.3.1.1 Molecular cloning and sequence analysis of PbGDPS	162
	9.3.1.2 Functional characterization of recombinant PbGDPS	164

9.3.1.3	Expression patterns of PbGDPS in <i>Phalaenopsis</i>	164
9.3.2	PbGDPS protein behaviors	169
9.3.2.1	Homology modeling of the PbGDPS structure	169
9.3.2.2	Site-directed mutagenesis of the Glu-rich motif	172
9.3.3	Phylogenetic relationships of PbGDPS . . .	172
9.4	Conclusions	175
9.5	Perspectives	177
	References	177

10. Warm- and Cool-Night Temperatures Alter Carbon Dioxide Fixation Pattern and Biochemical Metabolism in *Phalaenopsis aphrodite* 181

10.1	Introduction	182
10.2	Different Night Temperature Affects Photosynthesis	183
10.2.1	Chlorophyll a fluorescence	183
10.2.2	Gas exchange	183
10.3	Different Night Temperature Affects Biochemical Metabolisms	185
10.3.1	Organic acids	185
10.3.2	Metabolizable carbohydrates	187
10.3.3	Related-enzyme activities	187
10.4	The Relationship between Spike Induction and Diurnal Changes in Carbohydrates	190
10.5	Conclusion	191
	References	192

11. Flower Development in the *Oncidium* Orchid 195

11.1	Introduction	195
11.1.1	The ABCDE model for flower development	195

11.1.2	Flower development in nongrass monocots	200
11.1.3	The <i>Oncidium</i> flower as a model system . .	201
11.2	Characterization of <i>Oncidium</i> MADS Box Genes . .	203
11.2.1	A/E class genes and flower transition	203
11.2.2	B class genes and perianth formation	207
11.2.3	C, D class genes and sexual organ formation	213
11.3	Flower Modification	215
11.3.1	Modification of the perianth of the <i>Oncidium</i> flower	215
11.3.2	Other applications of <i>Oncidium</i> MADS box genes	216
11.4	Conclusions and Future Prospects	218
	References	219

12.	The Relationship Between Ethylene and Orchid Ovule Development	229
12.1	Introduction	229
12.1.1	Ethylene biosynthesis and ethylene signal transduction	229
12.1.2	Orchid reproductive biology	233
12.2	The Unique Control System for Orchid Ovule Development	234
12.2.1	Categories of ovule development in Orchidaceae	234
12.2.2	Orchid ovule morphogenesis	235
12.2.3	Benefit of a unique control system for orchid ovule development	235
12.3	Ethylene is Involved in Orchid Ovule Development	237
12.3.1	Ethylene function in plant physiology and development	237
12.3.2	Evidence of ethylene involved in orchid ovule development	237

12.3.3	Expression of <i>Phal-ACS</i> is regulated by pollination	238
12.3.4	Phosphorylation status of <i>Phal-ACS</i> correlated with ethylene production in the ovary	239
12.4	Orchid <i>GLOBOSA</i> -like Gene, <i>PeMADS6</i> , Involved in Ovary/ovule Development via a Mode of Action by Auxin/ethylene	241
12.4.1	Expression of <i>PeMADS6</i> is correlated to pollination	241
12.4.2	Expression of <i>PeMADS6</i> is regulated by auxin and ethylene	242
12.5	Future Prospects	245
	References	247
13.	The Application of the Chloroplast Genome of <i>Oncidium</i> in Plant Identification and Breeding in Oncidiinae	253
13.1	Introduction	253
13.1.1	Plant identification and breeding in <i>Oncidium</i>	253
13.1.2	PCR is a simple method for chloroplast genome sequencing	254
13.2	The Chloroplast Genome of <i>Oncidium</i> Gower Ramsey	255
13.2.1	The structure and characterization of the chloroplast genome of <i>Oncidium</i> Gower Ramsey	255
13.2.2	Broad phylogenetic analysis	255
13.3	Analysis of Variability in <i>ndh</i> Genes of 15 <i>Oncidium</i> Species	256
13.3.1	The <i>ndh</i> gene deletion in Oncidiinae cpDNA	256
13.3.2	Chloroplast genome deletion in plants	258
13.4	Phylogenetic Analysis of 15 <i>Oncidium</i> Species	259
13.4.1	Phylogenetic analysis of orchids	259

13.4.2	Multiple sequence combination is a good method for phylogenetic analysis	260
13.5	Conclusions	263
13.6	Future Prospects	263
	References	264
14.	Analysis of Chloroplast RNA Editing Sites in <i>Phalaenopsis aphrodite</i>	267
14.1	Introduction	267
14.1.1	RNA editing and regulation of gene function	267
14.1.2	Cis-elements surrounding the editing sites	268
14.1.3	Protein factors involved in RNA editing	269
14.2	Determination of Chloroplast RNA Editing Sites in <i>P. aphrodite</i>	270
14.2.1	RNA extraction and RT-PCR	270
14.2.2	Determination of RNA editing sites	271
14.3	Chloroplast RNA Editing Patterns in <i>P. aphrodite</i>	272
14.3.1	Overall properties of chloroplast RNA editing in <i>P. aphrodite</i>	272
14.3.2	RNA editing in transcripts encoding for genetic apparatuses	274
14.3.3	RNA editing in transcripts encoding for photosynthetic apparatuses	276
14.3.4	RNA editing in transcripts encoding for miscellaneous proteins	278
14.4	Future Prospects	279
	References	280
15.	Molecular Characterization of the Early Response of Orchid <i>Phalaenopsis amabilis</i> to <i>Erwinia Chrysanthemi</i> Infection	283
15.1	Introduction	284
15.2	Pathogenesis of <i>E. chrysanthemi</i> in Orchids	285

15.3	Signaling Transduction in Orchids During Early Infection with <i>E. chrysanthemi</i>	289
15.3.1	Strategy for isolating genes encoding protein kinases and phosphatases	291
15.3.2	Calcium-dependent protein kinases	292
15.3.2.1	Sequence analysis of <i>PaCDPK1</i> from <i>P. amabilis</i>	292
15.3.2.2	Expression of the <i>PaCDPK1</i> gene in response to <i>E. chrysanthemi</i>	293
15.3.2.3	Promoter activity of the <i>PaCDPK1</i> gene in response to <i>E. chrysanthemi</i>	293
15.4	Protein Tyrosine Phosphatases	295
15.4.1	Sequence analysis of <i>PaPTP1</i> from <i>P. amabilis</i>	295
15.4.2	Expression of the <i>PaPTP1</i> gene in response to wounding and <i>E. chrysanthemi</i>	296
15.4.3	The <i>PaPTP1</i> gene encoded a functional PTP	296
15.5	Genome-Wide Responses of Orchid Plants to <i>E. chrysanthemi</i> Infection	297
15.5.1	Strategy for studying transcriptional regulation during the pathogenesis	297
15.5.2	Pathogen-responsive expressed sequence tags (ESTs) in orchids	298
15.5.3	Functional significance of the pathogen-responsive ESTs	300
15.6	Conclusions and Future Prospects	304
	References	305

16. Identification and Characterization of New *Phalaenopsis* Orchid-Infecting Viruses 309

16.1	Orchid-Infecting Viruses	310
16.1.1	Orchid-infecting viruses	310
16.1.2	<i>Phalaenopsis</i> orchid-infecting viruses	311

16.1.3	Challenges of the identification of new <i>Phalaenopsis</i> orchid-infecting viruses	312
16.2	<i>Capsicum Chlorosis Virus</i> (CaCV-Ph)	313
16.2.1	Virus isolation and serological test	313
16.2.2	Virus identification	313
16.2.3	Back-inoculation	315
16.2.4	Significance of CaCV-Ph	316
16.3	<i>Phalaenopsis Chlorotic Spot Virus</i> (PhCSV)	317
16.3.1	Virus isolation and serological test	317
16.3.2	Virus identification	317
16.3.3	Back-inoculation	318
16.3.4	Significance of PhCSV	318
16.4	Carnation Mottle Virus (CarMV)	319
16.4.1	Virus isolation and serological test	319
16.4.2	Virus identification	320
16.4.3	Significance of CarMV	320
16.5	The Virus Causing a New Disease with Flower Crinkle in <i>Phalaenopsis</i>	321
16.5.1	Virus isolation and serological test	321
16.5.2	Virus identification	322
16.5.3	Back-inoculation	322
16.5.4	Significance of the virus	323
16.6	Conclusion and Future Prospects	324
	References	325
17.	What We have Learned from Studies of the Differential Movement Mechanism of <i>Cymbidium</i> Mosaic Virus	329
17.1	Introduction	330
17.2	Two Distinct Isolates of CymMV Move Differentially Between Hosts	330
17.3	Two Control Modes are Involved in CymMV Movement and CP Plays a Dominant Role in Movement	331
17.4	The Movement Ability of CymMV is Associated with the Binding Affinity of CP and Viral RNA	333

17.5	Sequence Analysis Revealed that Orchids May Not be the Natural Hosts of CymMV	335
17.6	Functional Diversity Generated by Potexviruses Through a Combination of Mutated Proteins from CymMV Quasi-Species	337
17.7	Conclusions	338
	References	339
18.	Transgenic Protection Against Virus Infection in Orchids	341
18.1	Introduction	341
18.1.1	Viruses occurring naturally in orchids	341
18.1.2	Isolates of CymMV and ORSV	343
18.1.3	Control of orchid viruses	343
18.1.4	Transgenic resistance to CymMV in orchids	344
18.2	Generating Transgenic Orchids	345
18.2.1	Preparation of transgene	346
18.2.2	Transformation of orchids	346
18.3	Molecular Characterization of Transgene	347
18.4	Viral Resistance of Transgenic Plants	348
18.5	Conclusions	350
18.6	Future Prospects	351
18.6.1	Application of CP-mediated protection for resistance against CymMV and ORSV in other orchids	351
18.6.2	Integration of virus-derived fragments in transgenic orchids for virus resistance	351
	References	352
