

Thermal Physics

Entropy and Free Energies

Second Edition

Joon Chang Lee

 World Scientific

Contents

<i>Preface</i>	vii
1. Introduction to Thermal Physics	1
1.1 Bird's-Eye View of Thermal Physics	1
2. All You Need to Know to Read the Rest of the Book	5
2.1 Several Taylor Series Expansions (★)	5
2.2 The Dirac δ Function (★★)	6
2.3 Gamma Function (★★★)	6
2.4 The Gaussian Integrals (★★★)	10
2.5 Hypersphere in d -Dimensional Space (★★★)	10
2.6 Fourier Transformations (★★)	13
2.7 Functional Derivative (★★)	14
2.8 The Method of Undetermined Lagrange Multiplier (★)	15
2.9 Permutations, Combinatorial and Arrangements (★)	16
2.10 Distribution Function (★★★)	17
2.11 The Central Limit Theorem (★★★)	22
2.12 Quantum Mechanics (★★★)	26
2.13 Thermal Physics on Computer	30
3. Isolated Thermal Systems	33
3.1 Introduction	33
3.2 The Fundamental Postulate	34
3.3 The Microcanonical Ensemble	35
3.4 Entropy and the Second Law of Thermodynamics	37
3.5 Entropy of Ideal Gas: Mobile Particles	40

3.5.1	With Position- and Momentum-Definite Microstates	41
3.5.2	With Energy-Definite Microstates	46
3.6	The Fundamental Thermodynamic Equations	49
3.7	Temperature, Pressure and Chemical Potential	49
3.8	The Approach to Equilibrium	53
3.8.1	Temperature	54
3.8.2	Pressure	55
3.8.3	Chemical Potential	56
3.8.4	Multiple Traffic Control Systems	58
3.8.5	Some Reflections	59
3.9	Macrostates	65
3.9.1	The Largest Macrostate	65
3.9.2	How Dominant?	66
3.10	First Law of Thermodynamics	68
3.11	Extensive and Intensive Variables	71
3.12	Entropy of Mixing	73
3.13	Entropy-Driven Forces	76
3.13.1	Rubber Bands	76
3.13.2	Colloidal Suspensions	77
3.13.3	Osmosis	78
3.13.4	Ideal Gas	80
3.14	Non-Mobile Thermal Systems	81
3.14.1	Magnets	82
3.14.2	Negative Temperature	88
3.15	Rubber Bands	91
3.16	Schottky Defects	95
4.	Systems in Contact with a Thermal Reservoir	97
4.1	Introduction	97
4.2	Helmholtz Free Energy	98
4.3	The Minimum Free Energy Principle	99
4.4	The Modified Postulate and the Boltzmann Factor	102
4.5	Response Functions and Fluctuations	108
4.5.1	Energy	109
4.5.2	Magnetization	110
4.6	Canonical Ensemble	112
4.6.1	Ising Spins	113
4.6.2	Schottky Defects	115

4.6.3	Ideal Gas	116
4.6.4	Equipartition Theorem	121
4.7	Maxwell–Boltzmann Distribution	122
4.8	Maxwell Velocity Distribution	125
4.9	Specific Heat and Einstein’s Solid	127
4.10	Specific Heat and Debye’s Solid	130
4.11	Solids and Gas in Equilibrium	132
4.12	Black Body Radiation	134
5.	Entropy as a Measure of Disorder	141
5.1	Introduction	141
5.2	Order and Disorder	141
5.3	Uncertainty and Missing Information: Shannon’s Entropy and Information Theory	147
5.4	Disorder Versus Uncertainty	153
6.	Open Systems Exposed to Heat and Particle Reservoir	155
6.1	Introduction	155
6.2	Open Systems	155
6.3	Grand Canonical Ensemble Formalism	157
6.4	Hemoglobin and Myoglobin	161
7.	Flexible Systems: Systems in Contact with Heat and Volume Reservoir	163
7.1	Introduction	163
7.2	Gibbs Free Energy	163
7.3	Constant Pressure Ensemble Formalism	165
7.3.1	Constant Pressure Ensemble Formalism I	166
7.3.2	Constant Pressure Ensemble Formalism II	167
7.4	Weak Solutions and Osmosis	169
7.5	External Chemical Potential	173
8.	Two More Energy-Like Functions and Concluding Remarks	177
8.1	Introduction	177
8.2	Energy	177
8.3	Enthalpy	178
8.4	Extensivities of Free Energies	179

8.5	Do Free Energies Have a Physical Meaning on Their Own? Maximum (Minimum) Work Theorem and Thermodynamic Potential	180
9.	Quantum Ideal Gas	185
9.1	Introduction	185
9.2	The Occupation Number Formalism and Slightly Degenerate Ideal Gas	186
9.3	Fermi–Dirac and Bose–Einstein Distribution Functions	194
9.4	Degenerate Electron Gas Near and At $T = 0$	195
9.5	Degenerate Ideal Boson Gas At and Near $T = 0$	201
9.6	The Classical Regime Revisited	204
10.	Thermodynamics	207
10.1	Introduction	207
10.2	Carnot Heat Engine I	208
10.3	Carnot Heat Engine II	210
10.4	Relationships Between Thermodynamic Derivatives	214
10.5	Important Thermodynamic Derivatives and Their Mutual Relationships	219
10.6	Thermodynamic Stability	220
11.	Energy Versus Free Energy	227
11.1	Introduction	227
11.2	Boltzmann Factor for Macrostates and Macrostate Free Energy	228
11.3	Thermodynamic Work and Thermodynamic Potential	231
11.4	Is Some Energy Really Free?	234
12.	Phases and Phase Transitions	237
12.1	Introduction	237
12.2	Liquid State and Solid State	238
12.3	Phase Diagrams	244
12.4	Phase Rule	246
12.5	Coexistence Curves	246
12.6	Interface	249
12.7	The Van der Waals Theory	251
12.8	Dynamics of First Order Phase Transitions	261

12.8.1	Unstable Region	263
12.8.2	Metastable Region	263
12.9	Binary Systems: Mixing and Demixing	265
12.10	More on Binary Mixtures: Their Phase Equilibria	270
13.	Second-Order Phase Transitions	275
13.1	Introduction	275
13.2	Liquid-Gas Molecular Systems	279
13.3	Spin Systems	284
13.3.1	Broken Symmetry, Order Parameter	286
13.4	Universality	289
13.5	Susceptibility and Spatial Correlations	289
13.6	Interacting Ising Spins on a Chain	292
13.7	Mean-Field Theory: Magnetism	296
13.8	Mean Field Theory: Liquid-Gas Systems	302
13.9	Landau Mean Field Theory	305
13.10	The Static Scaling Hypothesis	310
14.	Landau–Ginzburg Free Energy Functional and Applications	319
14.1	Introduction	319
14.2	Landau–Ginzburg Free Energy	319
14.3	The Renormalization Group Theory	322
14.4	Phase Separation Dynamics	330
14.4.1	The Time Evolution of the Order Parameter Function	332
15.	Quantum Fluid	341
15.1	Introduction	341
15.2	Superfluidity	342
15.3	Bose-Einstein Condensation	349
16.	Computer Simulations	355
16.1	Introduction	355
16.2	Monte Carlo Method I	355
16.3	Monte Carlo Method II: The Master Equation	357
16.4	Finite Size Scaling	366
	<i>Bibliography</i>	369
	<i>Index</i>	373
