

SYNDIOTACTIC POLYSTYRENE

*Synthesis, Characterization,
Processing, and Applications*

EDITED BY

JÜRGEN SCHELLENBERG

 WILEY

CONTENTS

PREFACE	xvii
CONTRIBUTORS	xxi
ABOUT THE EDITOR	xxv
PART I INTRODUCTION	1
1. Historical Overview and Commercialization of Syndiotactic Polystyrene	3
<i>Michael Malanga, Osamu Isogai, Takeshi Yamada, Shigeo Iwasaki, and Masahiko Kuramoto</i>	
1.1 Discovery of Syndiotactic Polystyrene (SPS)	3
1.2 Early Years of Development (1985–1989)	5
1.3 Intense Development Years (1989–1996)	6
1.4 Initial Commercial Launch Stage (1996–2001)	12
1.5 Years 2001–2007	13
PART II PREPARATION OF SYNDIOTACTIC POLYSTYRENE	15
2. Transition Metal Catalysts for Syndiotactic Polystyrene	17
<i>Norio Tomotsu, Thomas H. Newman, Mizutomo Takeuchi, Richard Campbell Jr., and Jürgen Schellenberg</i>	
2.1 Introduction	17
2.2 Transition Metal Compounds	18
2.2.1 Metals	18
2.2.2 Titanium Complexes	19
2.2.3 Molecular Weight Control	26
2.2.4 Supported and Heterogeneous Catalysts	27
2.3 Summary	29
References	29

3. Cocatalysts for the Syndiospecific Styrene Polymerization **32**

Norio Tomotsu, Hiroshi Maezawa, and Thomas H. Newman

3.1	Introduction	32
3.2	MAO	32
3.3	Boron Compounds	36
3.4	Other Chemicals	39
3.5	Summary	40
	References	40

4. Mechanisms for Stereochemical Control in the Syndiotactic Polymerization of Styrene **42**

Norio Tomotsu, Thomas H. Newman, and Richard Campbell Jr.

4.1	Introduction	42
4.2	Insertion of the Growing Polymer Chain into the Double Bond of Styrene	42
4.3	Stereochemistry of the Styrene Insertion	45
4.4	Effects of Hydrogenation of the Catalyst	47
4.5	Active Site Species	48
	4.5.1 Valence of Active Sites	48
	4.5.2 Number of Active Sites	52
	4.5.3 Structure of Active Sites	53
4.6	Theoretical Analysis of the Catalyst	54
4.7	Kinetic Analysis of Styrene Polymerization	54
4.8	Conclusions	57
	References	58

5. Copolymerization of Ethylene with Styrene: Design of Efficient Transition Metal Complex Catalysts **60**

Kotohiro Nomura

5.1	Introduction	60
5.2	Ethylene/Styrene Copolymers: Microstructures, Thermal Properties, and Composition Analyses	61
5.3	Ethylene/Styrene Copolymerization Using Transition Metal Complex–Cocatalyst Systems	64
	5.3.1 Half-Titanocenes, Cp [∗] TiX ₃	64
	5.3.2 Linked (Constrained Geometry Type) Half-Titanocenes	65
	5.3.3 Modified Half-Titanocenes, Cp [∗] Ti(L)X ₂	71

5.3.4	Non-Cp Titanium Complexes	79
5.3.5	Metallocenes	83
5.3.6	Others	85
5.4	Summary and Outlook	86
	References	87

6. Structure and Properties of Tetrabenzo[*a,c,g,i*]fluorenyl-Based Titanium Catalysts **92**

Rüdiger Beckhaus, Kai Schröder, and Jürgen Schellenberg

6.1	Introduction	92
6.2	The Tbf Ligand	94
6.3	Tbf Lithium	96
6.3.1	Synthesis and Characterization of Tbf Lithium	96
6.4	Tbf Titanium(III) Derivatives	98
6.4.1	Synthesis of Tbf Titanium(III) Chloride Complexes	98
6.4.2	Reaction of TbfTi ^{III} Cl ₂ (THF) (VIII) with Radicals	102
6.5	Tbf Titanium(IV) Derivatives	105
6.5.1	Synthesis of Tbf Titanium Monophenoxide Complexes	107
6.6	Dynamic and Polymerization Behavior of Tetrabenzofluorenyl Titanium Complexes	117
6.6.1	Styrene Polymerization	119
6.7	Conclusions	120
	References	120

7. Rare-Earth Metal Complexes as Catalysts for Syndiospecific Styrene Polymerization **125**

Klaus Beckerle and Jun Okuda

7.1	Introduction	125
7.2	Metallocene Catalysts	126
7.3	Constrained Geometry Catalysts	129
7.4	Half-Sandwich Catalysts	130
7.5	Nonmetallocene Catalysts	134
7.6	Conclusion	136
	References	136

8. Syndiospecific Styrene Polymerization with Heterogenized Transition Metal Catalysts	140
<i>Kyu Yong Choi</i>	
8.1 Introduction	140
8.2 Kinetics of Syndiospecific Polymerization with Heterogeneous Metallocene Catalysts	141
8.2.1 Kinetic Profiles of Heterogeneous SPS Polymerization	141
8.2.2 Liquid Slurry Polymerization with Heterogenized Cp*Ti(OCH ₃) ₃ Catalyst	143
8.2.3 Modeling of Polymerization Kinetics	145
8.2.4 Molecular Weight Distribution of SPS with Heterogeneous Catalysts	147
8.3 Nascent Morphology of Syndiotactic Polystyrene	149
8.3.1 Physical Transitions of Reaction Mixture During Polymerization	149
8.3.2 Effect of Reaction Conditions on Polymer Morphology	151
8.4 Concluding Remarks	153
References	153

PART III STRUCTURE AND FUNDAMENTAL PROPERTIES OF SYNDIOTACTIC POLYSTYRENE **155**

9. Structure, Morphology, and Crystallization Behavior of Syndiotactic Polystyrene	157
<i>Andrea Sorrentino and Vittoria Vittoria</i>	
9.1 Introduction	157
9.2 Polymorphic Behavior of SPS	157
9.2.1 Crystallization from the Melt State	159
9.2.2 Crystallization from the Glassy State	160
9.2.3 Morphology Development in the Presence of Solvents	163
9.3 Morphology of the Zigzag Forms	164
9.3.1 Crystal Structure of the α Form	164
9.3.2 Crystal Structure of the β Form	168
9.3.3 Lamellar and Spherulitic Morphology of the Zigzag Forms	170

9.4	Morphology of the Mesomorphic Phases	173
9.5	Thermodynamic and Kinetics of Crystallization	175
9.5.1	Thermodynamic and Kinetics of Crystallization	177
9.6	Melting Behavior	178
9.6.1	Equilibrium Melting Temperature of α and β Crystals	180
9.6.2	Memory Effects	182
9.7	Structure and Properties of the Crystallized Samples	183
9.7.1	Morphology of Injection Molded Samples	183
9.7.2	Relation between Morphology Structure, Processing, and Properties	184
	References	186
10.	Preparation, Structure, Properties, and Applications of Co-Crystals and Nanoporous Crystalline Phases of Syndiotactic Polystyrene	194
	<i>Gaetano Guerra, Alexandra Romina Albuja, and Concetta D'Aniello</i>	
10.1	Introduction	194
10.2	Co-Crystals	195
10.2.1	Crystalline Structures	196
10.2.2	Processing and Materials	199
10.2.3	Characterization Studies	202
10.2.4	Properties and Applications	209
10.3	Nanoporous Crystalline Phases	212
10.3.1	Crystalline Structures	213
10.3.2	Processing and Materials	215
10.3.3	Characterization Studies	217
10.3.4	Applications	219
10.4	Conclusions and Perspectives	224
10.5	Acknowledgments	225
	References	225
11.	Crystallization Thermodynamics and Kinetics of Syndiotactic Polystyrene	238
	<i>Tomoaki Takebe and Komei Yamasaki</i>	
11.1	Introduction	238
11.2	Theoretical Background	239
11.3	Equilibrium Melting Point of SPS	240
11.3.1	Evaluation of Spherulitic Growth Rate G	244

11.4	Analyses of Spherulitic Growth Rate G	248
11.5	Comparison Between SPS and IPS	249
	References	250

PART IV COMMERCIAL PROCESSES FOR MANUFACTURING OF SYNDIOTACTIC POLYSTYRENE **253**

12. Processes for the Production of Syndiotactic Polystyrene **255**

Masao Aida, David Habermann, Hans-Joachim Leder, and Jürgen Schellenberg

12.1	Introduction	255
12.2	Monomer Purification Section	255
12.3	Catalyst Section	256
12.4	Polymerization Section	256
12.4.1	Continuous Stirred Tank Reactor Process	257
12.4.2	Continuous Fluidized Bed Reactor Process	258
12.4.3	Continuous Self-Cleaning Reactor Process	258
12.5	Styrene Stripping Section	260
12.6	Deactivating Section	260
12.7	Pelletizing Section	262
12.8	Blending Section	262
12.9	Shipping Section	263
	References	264

PART V PROPERTIES, PROCESSING, AND APPLICATIONS OF SYNDIOTACTIC POLYSTYRENE **267**

13. Properties of Syndiotactic Polystyrene **269**

Tomoaki Takebe, Komei Yamasaki, Keisuke Funaki, and Michael Malanga

13.1	Introduction	269
13.2	Rheological Properties of SPS	269
13.3	Basic Physical Mechanical Properties of SPS	272
13.3.1	Thermal Properties of SPS	272
13.3.2	Mechanical Properties of SPS	274
13.4	Orientation of SPS and Properties of Oriented SPS	281
13.4.1	Properties of Uniaxially Oriented SPS	281
13.4.2	Properties of Biaxially Oriented SPS (BoSPS)	282

13.5	Other Important Properties of SPS	286
13.5.1	Electrical Properties of SPS	286
13.5.2	Chemical Resistance of SPS	287
	References	289

14. Melt Processing of Syndiotactic Polystyrene **290**

David Bank, Kevin Nichols, Harold Fowler, Jason Reese, and Gerry Billovits

14.1	Introduction	290
14.2	Compounding	294
14.2.1	Introduction	294
14.2.2	Compounding Equipment	295
14.2.3	Compounding Process Conditions	296
14.3	Injection Molding	298
14.3.1	Introduction	298
14.3.2	General Product Design	299
14.3.3	Thin Wall Product Designs	301
14.3.4	Injection Mold Design	301
14.3.5	Injection Mold Melt Delivery System (Runners and Gates)	302
14.3.6	Venting	304
14.3.7	Injection Molding Cooling Cycle and Crystallinity	304
14.3.8	Shrinkage during the Cooling Phase	304
14.3.9	Injection Molding Process Set-up	306
14.3.10	Injection Molding Cycle	308
14.3.11	Special Injection Molding Cycles	310
14.4	Sheet and Film Extrusion	311
14.4.1	Introduction	311
14.4.2	Extrusion	311
14.4.3	General Extruder Design	312
14.4.4	Processing Parameters	313
14.4.5	Material Drying	314
14.5	Film Processing and Fabrication	314
14.5.1	Introduction	314
14.5.2	Cast Film Extrusion	314
14.5.3	Thermoforming	315
14.6	Fiber Spinning	316
	References	319

19.4	Summary	415
19.5	Acknowledgment	415
	References	415
20.	Nanocomposites Based on Syndiotactic Polystyrene	417
	<i>O Ok Park and Mun Ho Kim</i>	
20.1	Introduction	417
20.2	Polymer Nanocomposites and Microstructure	418
20.3	Fabrication of Polymer Nanocomposites	419
20.4	Characterization of Polymer Nanocomposites	420
20.5	Preparation of SPS Nanocomposites	421
20.5.1	Effect of Alkyl Chain Aggregation in Organoclay—Bilayer versus Monolayer Arrangement	423
20.5.2	Improvement in the Thermal Stability of Organoclay	424
20.6	Properties of SPS Nanocomposites	425
20.6.1	Mechanical Properties	425
20.6.2	Crystallization Behavior	426
20.6.3	Dynamic Rheological Properties	426
20.7	Final Remarks	427
	References	429
