 WILEY-VCH

Lipids and Cellular Membranes in Amyloid Diseases

Contents

Preface XI

List of Contributors XIII

- 1 Interactions of α -Synuclein with Lipids and Artificial Membranes Monitored by ESIPT Probes 1**
Volodymyr V. Shvadchak, Lisandro J. Falomir- Lockhart, Dmytro A. Yushchenko, and Thomas M. Jovin
 - 1.1 Introduction to Parkinson's Disease and α -Synuclein 1
 - 1.2 Structural Biology of α -Synuclein 4
 - 1.3 Methods for Studying AS-Lipid Interactions 6
 - 1.4 AS-Lipid Interactions 13
 - 1.5 Interactions of Monomeric AS with Artificial Membranes Monitored with ESIPT Probes 15
 - 1.5.1 Influence of Membrane Charge 16
 - 1.5.2 Influence of Membrane Curvature 16
 - 1.5.3 Influence of Membrane Phase 17
 - 1.5.4 Influence of Acyl Chains 18
 - 1.5.5 Influence of Cholesterol 19
 - 1.5.6 Binding Kinetics 19
 - 1.6 Aggregation of AS and the Effects of Fatty Acids Monitored with ESIPT Probes 21
 - 1.7 Concluding Remarks 23
 - References 23

- 2 Structural and Functional Insights into α -Synuclein-Lipid Interactions 33**
Martin Stöckl, Bart D. van Rooijen, Mireille M.A.E Claessens, and Vinod Subramaniam
 - 2.1 Introduction 33
 - 2.2 Interaction of α -Synuclein with Model Membrane Systems 35
 - 2.2.1 Binding of α -Synuclein Species to Giant Unilamellar Vesicles 35
 - 2.2.2 Model Membrane Permeabilization by α -Synuclein Oligomers 39
 - 2.2.3 Structural Features of α -Synuclein Oligomers 41

2.3	Biological Significance	45
2.3.1	Interaction Sites	45
2.3.2	Membrane Penetration	47
	References	49
3	Surfactants and Alcohols as Inducers of Protein Amyloid: Aggregation Chaperones or Membrane Simulators?	57
	<i>Daniel E. Otzen</i>	
3.1	Introduction	57
3.2	Aggregation in the Presence of Surfactants	58
3.2.1	General Aspects of Protein–Surfactant Interactions	58
3.2.2	Effect of Surfactants on Protein Structure	60
3.2.3	Stoichiometry of SDS Binding	61
3.2.4	Aggregation of Proteins by SDS	61
3.2.4.1	A β	63
3.2.4.2	β_2 -Microglobulin and β_2 -Glycoprotein I	66
3.2.4.3	Tau Protein	67
3.2.4.4	Prion Protein	67
3.2.4.5	Acyl CoA Binding Protein (ACBP)	68
3.2.4.6	α -Synuclein (α SN)	69
3.3	Palimpsests of Future Functions: Cytotoxic Protein–Lipid Complexes	72
3.4	Aggregation in Fluorinated Organic Solvents	74
3.4.1	Protein Examples	76
3.4.1.1	Acyl Phosphatase	76
3.4.1.2	β_2 -Microglobulin	76
3.4.1.3	α -Chymotrypsin	77
3.4.1.4	Alteration of Fibril Structure by TFE	77
3.4.1.5	Other Proteins	78
3.5	From Mimetics to the Real Thing: Aggregation on Lipids	78
3.5.1	Binding Surfaces and High Local Concentrations	78
3.5.2	Conformational Changes Associated with Binding	79
3.5.3	Chemical Variability of the Lipid Environment	80
3.6	Summary	81
	References	82
4	Interaction of hIAPP and Its Precursors with Model and Biological Membranes	93
	<i>Katrin Weise, Rajesh Mishra, Suman Jha, Daniel Sellin, Diana Radovan, Andrea Gohlke, Christoph Jeworrek, Janine Seeliger, Simone Möbitz, and Roland Winter</i>	
4.1	Introduction	93
4.2	Results	95
4.2.1	The Conformations of Native proIAPP and hIAPP in Bulk Solution	95

- 4.2.2 Fibrillation Kinetics and Conformational Changes of hIAPP and proIAPP in the Presence of Anionic Lipid Bilayers 96
- 4.2.3 Effect of the Membrane-Mimicking Anionic Surfactant SDS on the Amyloidogenic Propensity of hIAPP and proIAPP 102
- 4.2.4 hIAPP and proIAPP Aggregation and Fibrillation at Neutral Lipid Bilayers and Heterogeneous Model Raft Mixtures 105
- 4.2.5 Comparison with Insulin–Membrane Interaction Studies 111
- 4.2.6 Cytotoxicity of hIAPP 112
- 4.3 Conclusions 115
- References 117

5 Amyloid Polymorphisms: Structural Basis and Significance in Biology and Molecular Medicine 121

Massimo Stefani

- 5.1 Introduction 121
- 5.2 Only Generic Data Are Currently Available on the Structural Features of Amyloid Oligomers 124
- 5.3 The Plasma Membrane Can Be a Primary Site of Amyloid Oligomer Generation and Interaction 127
- 5.4 Oligomer/Fibril Polymorphism Can Underlie Amyloid Cytotoxicity 129
- 5.5 Amyloid Oligomers Grown Under Different Conditions Can Display Variable Cytotoxicity by Interacting in Different Ways with the Cell Membranes 132
- 5.6 Conclusions 135
- References 136

6 Intracellular Amyloid β : a Modification to the Amyloid Hypothesis in Alzheimer's Disease 143

Yan Zhang

- 6.1 Introduction 143
- 6.2 Evidence for the Presence of Intracellular Amyloid 144
 - 6.2.1 Detection of Intracellular Amyloid 144
 - 6.2.2 Neurotoxicity of Intracellular Amyloid 145
 - 6.2.3 Possible Mechanisms of Intracellular Amyloid Toxicity 146
- 6.3 Sources of Intracellular Amyloid 146
- 6.4 Relationship Between Intracellular and Extracellular Amyloid 148
- 6.5 Prevention of Intracellular Amyloid Toxicity 149
- 6.6 Concluding Remarks 149
- 6.7 Disclosure Statement 150
- References 150

- 7 Lipid Rafts Play a Crucial Role in Protein Interactions and Intracellular Signaling Involved in Neuronal Preservation Against Alzheimer's Disease 159**
Raquel Marin
- 7.1 Lipid Rafts: Keys to Signaling Platforms in Neurons 159
- 7.2 Estrogen Receptors Are Part of Signaling Platforms in Neuronal Rafts 163
- 7.3 Role of Lipid Raft ER α -VDAC Interactions in Neuronal Preservation Against A β Toxicity 164
- 7.4 Disruption of ER α -VDAC Complex in AD Brains 167
- 7.5 Future Studies 169
- References 169
- 8 Alzheimer's Disease as a Membrane-Associated Enzymopathy of β -Amyloid Precursor Protein (APP) Secretases 177**
Saori Hata, Yuhki Saito, and Toshiharu Suzuki
- 8.1 Introduction 177
- 8.1.1 Cholesterol and Alzheimer's Disease Pathogenesis 180
- 8.1.2 ApoE, Lipoprotein Receptors and Alzheimer's Disease 181
- 8.1.2.1 LRP1 and IRLP1B 182
- 8.1.2.2 SorLA/LR11 182
- 8.1.2.3 ApoER2/LRP8 183
- 8.1.3 Lipid Rafts and Alzheimer's Disease 183
- 8.1.3.1 APP-Cleaving Enzyme and Lipid Rafts 183
- 8.1.3.2 APP, X11 Family Proteins, and Lipid Rafts 184
- 8.2 Intramembrane-Cleaving Enzyme of Type I Membrane Proteins 186
- 8.2.1 γ -Secretase 186
- 8.2.2 γ -Secretase and Cholesterol 186
- 8.3 Alcadin Processing by γ -Secretase in Alzheimer's Disease 187
- 8.3.1 Alcadin as a γ -Secretase Substrate in Neurons 187
- 8.3.2 Alcadin Processing and γ -Secretase Dysfunction 188
- References 190
- 9 Impaired Regulation of Glutamate Receptor Channels and Signaling Molecules by β -Amyloid in Alzheimer's Disease 195**
Zhen Yan
- 9.1 Introduction 195
- 9.2 AMPAR-Mediated Synaptic Transmission and Ionic Current are Impaired by A β 195
- 9.3 CaMKII is Causally Involved in A β Impairment of AMPAR Trafficking and Function 196
- 9.4 PIP2 Regulation of NMDAR Currents is Lost by A β 197
- 9.5 The Effect of AChE Inhibitor on NMDAR Response is Impaired in APP Transgenic Mice 199

9.6	A β Impairs PKC-Dependent Signaling and Functions	201
9.7	Conclusion	202
	References	203
10	Membrane Changes in BSE and Scrapie	207
	<i>Cecilie Ersdal, Gillian McGovern, and Martin Jeffrey</i>	
10.1	Prion Diseases	207
10.2	The Cellular Prion Protein (PrP ^c) and Conversion to Disease-Associated Prion Protein (PrP ^d)	207
10.3	PrP ^d Accumulation in the Central Nervous System and Lymphatic Tissues	210
10.4	Aberrant Endocytosis and Trafficking of PrP ^d in Neurons and Tingible Body Macrophages	213
10.5	Abnormal Maturation Cycle and Immune Complex Trapping of Follicular Dendritic Cells in Lymphoid Germinal Centers	217
10.6	Molecular Changes of Plasma Membranes Associated with PrP ^d Accumulation	219
10.7	Transfer of PrP ^d Between Cells	220
10.8	Extracellular Amyloid Form of PrP ^d	221
10.9	Strain-Directed Effects of Prion Infection	222
10.10	Conclusion and Perspectives	222
10.11	Summary	223
	References	223
11	Interaction of Alzheimer Amyloid Peptide with Cell Surfaces and Artificial Membranes	231
	<i>David A. Bateman and Avijit Chakrabartty</i>	
11.1	Introduction	231
11.2	Comparison of the Neurotoxicity of Oligomeric and Fibrillar Alzheimer Amyloid Peptides	232
11.3	A β Oligomerization at the Cell Surface	233
11.4	Catalysis of A β Oligomerization by the Cell Surface	234
11.5	Type of A β Complexes that Form on the Cell Surface	234
11.6	Association of Alzheimer Amyloid Peptides with Lipid Particles	238
11.7	Future Directions	238
	References	239
12	Experimental Approaches and Technical Challenges for Studying Amyloid–Membrane Interactions	245
	<i>Raz Jelinek and Tania Sheynis</i>	
12.1	Introduction	245
12.2	Unilamellar Vesicles and Micelles	246
12.2.1	Fluorescence spectroscopy	246
12.2.2	Fluorescence microscopy	248
12.2.3	Nuclear magnetic resonance	249
