

VIROLOGY

MOLECULAR BIOLOGY AND PATHOGENESIS

LEONARD C. NORKIN

Contents

Preface *xix*

PART I Introduction 1

1 A Selective History on the Nature of Viruses 3

Introduction 3

The Early Years: Discoverers and Pioneers 4

The First Stirrings of the Molecular Era 7

The Phage Group 10

Phage Growth: Eclipse and Replication 11

Defining Viruses 15

Are Viruses Alive? 16

Origin of Viruses 17

The Modern Era of Animal Virology 17

2 Biosynthesis of Viruses: an Introduction to Virus Classification 20

T-Even Bacteriophages as a Model System 20

T-Even Phage Structure and Entry 22

Sequence of Phage Biosynthetic Events 24

Phage Protein Synthesis 24

RNA Metabolism in Infected Cells 25

Assembly of Progeny Phages 27

Packaging DNA within the Phage Particle 28

Unique Features of T-Even Phages 30

Modified Bases 30

Regulated Gene Expression 30

Phage Release: Lysozyme and the *rII* Region 32

Bacteriophage Lambda (λ): Lysogeny and Transduction 33

Some Final Comments on Bacteriophages 39

Introduction to the Animal Viruses	39
Animal Virus Structure	39
Entry of Animal Viruses	42
The Families of Animal Viruses: Principles of Classification	45
Viral Genetic Systems: the Baltimore Classification Scheme	45

3 Modes of Virus Infection and Disease 50

Introduction	50
Portals of Entry	50
Routes of Dissemination	54
Hematogenous and Neural Dissemination	54
The Placenta and the Fetus	60
Acute versus Persistent Infections	63
Acute Infections	64
Persistent Infections	66
Slow Infections	66
Chronic Infections	68
Latent Infections	74
Transmissible Spongiform Encephalopathies: Prions	76

4 Host Defenses and Viral Countermeasures 80

Introduction	80
Overview of Defenses	81
Physical Barriers against Infection	82
The Innate Immune System	82
Cytokines: the IFNs	84
Cytokines: TNF- α , Some Other Cytokines, and Inflammation	88
Macrophages, Neutrophils, NK Cells, and Antibody-Dependent Cellular Cytotoxicity	89
The Complement System	95
Viral Evasion of Innate Immunity	98
Evasion of IFNs	98
Evasion of Cytokines	100
Evasion of NK Cells and ADCC	101
Evasion of Complement	102
APOBEC3G and the HIV Vif Protein	103
The Adaptive Immune System	103
Antibodies and B Cells	104
Antibody Diversity	106
Viral Evasion of Antibodies	110
Cell-Mediated Immunity	113
Antigen Presentation by MHC Class I Molecules	119
Antigen Presentation by MHC Class II Molecules	119
The Rationale for MHC Restriction	121
Activation of Th Cells: Dendritic Cells and B Cells	124
Activation of B Cells	126
Activation of CTLs	128
Mechanism of Action of CTLs	129

- T Cells and Antiviral Cytokines 131
- Viral Evasion of Cell-Mediated Immunity 132
 - Inhibition of Antigen Presentation to CTLs 132
 - Inhibition of Antigen Presentation to Helper T Cells 134
 - Inhibition of Apoptosis 134
- Immunological Memory 136
- Self Tolerance 137
- The Immune System in Disease 140
 - Immunopathology 140
 - Autoimmune Disease 141

PART II Virus Replication and Pathogenesis 147

RNA VIRUSES: DOUBLE STRANDED 149

5 Reoviruses 149

- Introduction 149
- Structure, Binding, Entry, and Uncoating 150
 - Reovirus Binding and Entry into the Cell 150
 - Structure, Uncoating, and Entry into the Cytoplasm 154
- The Reovirus Genome: Transcription and Translation 156
 - The Particle-Associated RNA Polymerase 156
 - The Segmented Reovirus Genome 158
 - Conversion of ISVPs to Cores 161
- Replication and Encapsidation of the Reovirus Genome 165
 - Synthesis of Double-Stranded RNA 165
 - Assembly of Progeny Subviral Particles and Encapsidation of RNA Segments 166
 - Reoviruses and IFN 166
- Primary versus Secondary Transcription 167
- Final Virus Assembly 168
- Pathogenesis 168
 - Orthoreoviruses 168
 - Rotaviruses 168
 - Coltiviruses 169

RNA VIRUSES: SINGLE STRANDED 171

6 Picornaviruses 171

- Introduction 171
- Structure, Binding, and Entry 172
 - Picornavirus Structure 172
 - Rhinovirus Receptor and Binding: the Canyon Hypothesis 173
 - The Poliovirus Receptor 177
 - Receptors for Cocksackieviruses and Other Enteroviruses 179
 - Receptors for FMDVs 180
 - Poliovirus and Rhinovirus Entry: Some General Points 181
 - Poliovirus Entry 181

- Human Rhinovirus Entry 183
- Poliovirus and Rhinovirus Entry: Why the Differences? 184

Translation 184

- Translation: Part I 184
- Translation: a Digression 187
 - The RNA Phages 187
 - Picornaviruses versus RNA Phages: Why the Differences? 191
- Translation: Part II 192

Transcription and Genome Replication 194

Assembly and Maturation 198

Medical Aspects 200

- Poliovirus 200
- Rhinoviruses: the Common Cold 203
- Coxsackievirus and Echovirus 205
- Viral Hepatitis: Hepatitis A 205

7 Flaviviruses 207

- Introduction 207
- Structure and Entry 208
- Replication 209
- Assembly and Release 209
- Historic Interlude: Identification of Hepatitis C Virus 212
- West Nile Virus: an Emerging Virus 213
- Epidemiology and Pathogenesis 214
 - General Principles of Arthropod Transmission 214
 - Infection, Dissemination, and Determinants of Pathogenesis 215
 - Hemorrhagic Fever Viruses: Yellow Fever and Dengue Viruses 217
 - Encephalitis Viruses: Japanese Encephalitis, St. Louis Encephalitis, and West Nile Viruses 218
 - Japanese Encephalitis and St. Louis Encephalitis Viruses 218
 - West Nile Virus 220
 - Hepatitis C Virus 220

8 Togaviruses 224

- Introduction 224
- Structure and Entry 225
- Transcription, Translation, and Genome Replication 228
- Assembly and Maturation 231
- Epidemiology and Pathogenesis 232
 - Alphaviruses That Cause Encephalitis: Eastern, Western, and Venezuelan Equine Encephalitis Viruses 232
 - Alphaviruses That Cause Arthritis: Chikungunya, Ross River, and Sindbis Viruses 232
 - Rubella Virus 232

9 Coronaviruses 235

Introduction 235

Structure 236

Entry 237

Genome Organization and Expression 238

Coronavirus mRNAs and Their Translation 238

Coronavirus Transcription 243

Coronavirus Recombination 247

Coronavirus Reverse Genetics 248

Assembly and Release 250

Medical Aspects 251

SARS 252

10 Rhabdoviruses 261

Introduction 261

Structure 262

Entry 263

Genome Organization, Expression, and Replication 264

The General Transcriptional Strategy of Viruses That Contain Negative-Sense

RNA Genomes 264

Gene Organization and Transcription 264

Replication 267

Assembly and Release 268

Medical Aspects 269

Cytopathic Effects 269

VSV 270

Rabies Virus 270

11 Paramyxoviruses 273

Introduction 273

Structure 274

Entry 276

Syncytium Formation 279

Genome Organization, Expression, and Replication 279

Genome Organization and Transcription 279

Replication 281

Assembly and Release 282

Medical Aspects 282

Measles 282

Clinical Conditions 282

SSPE 285

Where Did Measles Come from? 288

Measles Vaccine 289

Mumps 290

Parainfluenza Viruses 290

Respiratory Syncytial Virus 291

HMPV	292
Hendra, Nipah, and Menangle Viruses	294
CDV	295

12 Orthomyxoviruses 296

Introduction	296
Structure	298
Entry	299
Endocytosis and Intracellular Trafficking of Influenza Virus-Containing Endosomes	300
Viral Membrane Fusion: the HA Protein	302
Release of the Genome from the Envelope: the M2 Protein	307
Transport of vRNPs to the Cell Nucleus	308
Genome Organization, Transcription, and Replication	311
Genome Organization and Transcription	311
Why Does Influenza Virus Transcription Really Occur in the Nucleus?	317
Replication	317
The NS1 and PB1-F2 Proteins	318
Assembly and Release	322
Assembly of vRNPs	322
Two Issues Regarding Intracellular Targeting of Viral Components	322
Transport of vRNPs from Nucleus to Cytoplasm	322
Apical Targeting of Virus Components and Final Virus Assembly	323
Encapsidating Eight Distinct Genomic Segments	325
Release: the Influenza Virus NA Protein	325
Medical Aspects	325
Pathology and Clinical Syndromes	325
The Flu Pandemic of 1918	326
Origin of Epidemic and Pandemic Strains: Antigenic Drift and Antigenic Shift	328
Virulence of the 1918 Pandemic Influenza Virus: Opening Pandora's Box	333
Influenza Drugs and Vaccines	336
Avian Influenza and Humans	337
Preparedness for an Outbreak of Avian Influenza	341

13 Miscellaneous RNA Viruses 346

Introduction	346
Arenaviruses	347
Lassa Fever Virus: an Early Emerging Virus	348
LCMV and Immunopathology	348
The Ambisense Arenavirus Genome	349
Bunyaviruses	350
Sin Nombre and Hantaan Viruses	351
The Tripartite Bunyavirus Genome	351
Bornaviruses	352
BDV and Human Neuropsychiatric Disease	352
Bornavirus Genomes and Their Nuclear Transcription and Replication	354
Caliciviruses	355
Norwalk Virus (Norovirus)	355
Calicivirus Replication	356
Astroviruses	356

- Hepatitis E-Like Viruses 357
- Filoviruses 358
 - Structure and Replication 358
 - Marburg and Ebola Viruses 358
 - Is Ebola Virus the "Andromeda Strain?" 361

DNA VIRUSES: SINGLE STRANDED 362

14 Parvoviruses 362

- Introduction 362
- Parvovirus Structure, Binding, and Entry 363
- Parvovirus Genomes 365
- Replication of Parvovirus Single-Stranded DNA 367
 - A General Model: the "Rolling Hairpin" 368
- Encapsidation of Progeny DNA 371
- Genome Organization and Expression 374
- The Dependovirus Life Cycle 374
 - Integration of Dependovirus Genomes 375
- Medical Aspects 376

DNA VIRUSES: DOUBLE STRANDED 378

15 Polyomaviruses 378

- Introduction 378
- Structure 380
- Entry and Uncoating 382
- Genome Organization and Expression 385
 - Genome Organization 385
 - The Regulatory Region 386
 - T Antigen in Temporal Regulation of Transcription 390
 - Splicing Pattern of Viral mRNA 394
- DNA Replication 395
- Late Proteins and Assembly 399
- T Antigens and Neoplasia 401
- SV40 in Its Natural Host 410
- SV40 in Humans 411
- JCV and BKV in Humans 414
- KI, WU, and Merkel Cell Human Polyomaviruses 415
- SV40-Based Gene Delivery Vectors 418

16 Papillomaviruses 419

- Introduction 419
- Structure 420
- Entry and Uncoating 421

Genome Organization and Expression	424
Replication	429
Release and Transmission	432
Cell Transformation and Oncogenesis: Cervical Carcinoma	433
Molecular Mechanisms	433
Stages of Cancer Development	439
Tissue Microenvironment	439
Treatment and Prevention	441
HPV Vaccine To Prevent Cervical Cancer	441
Oropharyngeal Cancer	442

17 Adenoviruses 444

Introduction	444
Structure	446
Entry and Uncoating	448
Genome Organization and Expression	452
E1A and E1B Proteins in Replication and Neoplasia	456
Shutoff of Host Protein Synthesis	458
DNA Replication	460
Assembly	462
Evasion of Host Defenses	464
Clinical Syndromes	465
Recombinant Adenoviruses	466
Gene Therapy	466
Cancer Therapies	467
Vaccines: HIV and Influenza Virus	469

18 Herpesviruses 471

Introduction	471
Structure	473
Entry and Uncoating	475
Genome Organization and Expression	481
DNA Replication	487
Assembly, Maturation, and Release	488
Assembly of Procapsids	488
Encapsidation of DNA	490
Final Assembly and Release	491
Latent Infection and Immune Evasion	493
HSV	494
EBV	499
HCMV	503
Clinical Syndromes	506
HSV	507
EBV	508
HCMV	512

- VZV 513
- HHV-6 514
- HHV-7 515
- HHV-8 515

Treatment and Prevention 516

- Antiviral Drugs 516
- Vaccines 519

19 Poxviruses 521

Introduction 521

Structure 523

Entry and Uncoating 525

- IMVs 526
- EVs 528

Genome Organization and Expression 529

DNA Replication 533

Assembly, Maturation, and Release 534

Immune Evasion 538

- Countermeasures against Innate Defenses 538
- Countermeasures against Adaptive Defenses 541

Clinical Syndromes 543

- Smallpox 543
- Molluscum Contagiosum 544
- Vaccinia Virus and the Smallpox Vaccine 546

Smallpox and Bioterrorism 547

PART III Retroviruses: Oncogenes and Cancer, HIV and AIDS 551

20 The Retroviruses: the RNA Tumor Viruses 553

Introduction 553

A Historical Interlude 556

Structure 559

Entry 561

The Replication Cycle: a Brief Overview 562

Genome Organization 563

Reverse Transcription 564

Integration 568

Gene Expression and Replication 569

Assembly, Maturation, and Release 572

- Gag and Gag-Pol 572
- Env and Budding 575

Oncogenesis 576

- Oncogene-Transducing Oncogenic Retroviruses 577
- Oncogene-Deficient Oncogenic Retroviruses 588

Retrovirus Vectors for Gene Therapy	591
Spumaviruses	592
Retroelements	593

21 The Retroviruses: Lentiviruses, Human Immunodeficiency Virus, and AIDS 597

Introduction	597
Historical Background and Social Issues	597
HIV and the Lentiviruses	600
Discovery of HIV as the Cause of AIDS	602
Structure	605
Routes of Transmission and Mechanisms of Infection	606
Routes of Transmission	606
Entry into the Host	607
Entry into Cells	610
The HIV Coreceptors	611
Entry into Human Placental Trophoblasts: a Special Case?	614
Therapeutic Strategies That Target Entry	615
Genome Organization, Expression, and Replication	616
Genome Organization and Expression	616
The Regulatory Proteins: Tat and Rev	619
Assembly, Maturation, and Budding	621
HIV Assembly in Macrophages: Macrophages in HIV Pathogenesis	622
The Course of HIV/AIDS	623
The Acute HIV Disease Stage	623
The Asymptomatic HIV Disease Stage	624
The Symptomatic HIV Disease Stage	627
AIDS: Advanced HIV Disease Stage	627
The Viral Set Point and HAART	627
Immunopathogenesis	629
Immune Evasion and Manipulation	634
The Accessory Proteins: Nef, Vpu, Vif, Vpr, and Vpx	635
Tat Revisited	639
Evasion and Subversion of Antibody-Mediated Immunity	640
HIV and Complement	640
HIV and the IFNs	641
HIV (SIV) in Its Natural Host and Its Origins as a Human Virus	641
Clinical Manifestations of HIV/AIDS	643
Therapies and Vaccines	647
Antiretroviral Drugs	647
Anti-HIV Vaccines	653
Prevention	655
Testing for HIV	657
HIV/AIDS in Sub-Saharan Africa	662
The General Problem	662
The Case of South Africa	665
The Human T-Cell Leukemia (Lymphotropic) Viruses	666

22 Hepadnaviruses and Hepatitis Delta Virus 672

The Hepadnaviruses: DNA Retroviruses 672

Introduction 672

Structure 674

Replication 675

Entry 675

Genome Organization 676

Gene Expression 678

Reverse Transcription 679

The Foamy Viruses: Reprise 684

Maturation and Release 684

Routes of Transmission and Pathogenesis 685

Hepatocellular Carcinoma 688

HBV Vaccine 689

HBV Therapies 689

Hepatitis Delta Virus: a Subviral Pathogen 690

Introduction 690

Replication 690

Routes of Transmission and Pathogenesis 693

Index 695
