

Green Energy and Technology

Pasquale Corbo
Fortunato Migliardini
Ottorino Veneri

Hydrogen Fuel Cells for Road Vehicles

 Springer

Contents

1	Possible Routes Towards Carbon-Free Vehicles	1
1.1	Mobility Demands and Primary Energy Resources	3
1.2	Internal Combustion Engines and Their Impact on Air Quality	11
1.3	Climate Change and Carbon-Free Fuel Chance	19
	References	30
2	Hydrogen as Future Energy Carrier	33
2.1	Hydrogen Production	34
2.1.1	Thermal Processes	36
2.1.2	Electrolytic Processes	48
2.1.3	Photolytic Processes	53
2.2	Hydrogen Distribution	53
2.3	Hydrogen Storage	56
2.3.1	Hydrogen Storage in High Compressed Gas Form	58
2.3.2	Hydrogen Storage in Liquid Cryogenic Form	59
2.3.3	Hydrogen Storage in Solid Materials	61
	References	64
3	Fuel Cells for Automotive Applications	71
3.1	Basic Concepts of Electrochemistry	72
3.2	Proton Exchange Membrane Fuel Cells	76
3.2.1	The MEA: Membrane	79
3.2.2	The MEA: Electrocatalysts	83
3.2.3	The MEA: GDL	84
3.2.4	The Bipolar Plates	86
3.3	Sensitivity of PEM Stacks to Operating Conditions	88
3.3.1	The Polarization Curve	88
3.3.2	Effect of Operative Parameters on the Polarization Curve	94

3.4	Durability of PEM Fuel Cells	97
	References	99
4	Design of Hydrogen Fuel Cell Systems for Road Vehicles	103
4.1	Hydrogen Fuel Cell Systems: Preliminary Remarks	104
4.2	Hydrogen Feeding System	106
4.3	Air Feeding System	108
4.4	Thermal Management System	114
4.5	Water/Humidification Management System	116
4.6	Integrated Fuel Cell System: Efficiency, Dynamics, Costs	121
	4.6.1 FCS Efficiency	123
	4.6.2 FCS Dynamics	125
	4.6.3 FCS Costs	127
	References	128
5	Electric Vehicles in Hybrid Configuration	131
5.1	Electric Vehicles: Preliminary Remarks	131
5.2	Electric Drives for Road Vehicles	133
	5.2.1 DC Electric Machines	134
	5.2.2 AC Electric Machines	136
	5.2.3 Control and Power Electronics	138
5.3	Storage Electrochemical Batteries	140
	5.3.1 Main Operative Parameters of Batteries	141
	5.3.2 Main Characteristics of Different Types of Batteries	146
5.4	Alternative Energy Storage Systems	154
	5.4.1 Flywheels	154
	5.4.2 Super Capacitors	155
5.5	Hybrid Propulsion Systems	157
	5.5.1 Hybrid Thermal Electric Vehicles	157
	5.5.2 Solar Vehicles	160
	5.5.3 Vehicles Using Flywheels and Super Capacitors	161
	5.5.4 Fuel Cell Electric Vehicles	162
	References	165
6	Case Study A: Fuel Cell Power Train for Mopeds	167
6.1	Description of the 3.5 kW Fuel Power Train	167
6.2	Efficiency Calculations	171
6.3	FCS Characterization: Energy Losses in Steady State Conditions	174
6.4	Dynamic Performance of the FCS	176
6.5	Characterization of the Overall Power Train on Driving Cycles	185

6.5.1	Analysis of the FCS Dynamic Behavior on Driving Cycles	185
6.5.2	Analysis of the Overall Propulsion System on Driving Cycles	189
	References	198
7	Case Study B: Fuel Cell Power Train for Cars	199
7.1	Description of the 30 kW Fuel Power Train	199
7.2	FCS Characterization: Effect of Operative Parameters	203
7.3	Analysis of the Dynamic Behavior of the FCS	210
	7.3.1 Performance of the FCS During Load Variations.	211
	7.3.2 Behavior of the FCS During Warm-up.	219
7.4	Effect of Different Air Management Strategies	223
7.5	Fuel Cell Power Train Tested on the R40 Driving Cycle	236
	References	240
	Index	241
