

Advanced engineering design

Efrén M. Benavides

Contents

<i>List of figures and tables</i>	<i>xi</i>
<i>Acknowledgments</i>	<i>xv</i>
<i>About the author</i>	<i>xvii</i>
1 The design process	1
1.1 The concept of design and related terms	1
1.2 Design as a value-generating process in society	4
1.3 The goal of design theories	13
1.4 Background	18
1.5 The scope of design theories	20
1.6 The definition of design	22
1.7 The characteristics of design	24
1.8 Design problem	25
1.9 Activities in the design process	26
1.10 Information management	29
1.11 The design process as a product	31
1.12 The importance of the design process	33
1.13 The importance of Design Science	35
1.14 Notes	36
2 Information, entropy and its relationship to design	41
2.1 The design process in terms of probabilities	41
2.2 Definition of design	43
2.3 Uncertainty	44

2.4	Entropy	45
2.5	Joint entropy, conditioned entropy and relative entropy	48
2.6	Mutual information	50
2.7	Upper and lower bounds of mutual information. Information content of a variable	52
2.8	Process information	53
2.9	Spaces of definition: need–solution–response–satisfaction	55
2.10	Degree of satisfaction	61
2.11	Conceptual and detailed design	64
2.12	Operators: necessary, generated and available information	65
2.13	First statements	67
2.14	Notes	70
3	Axiomatic design	77
3.1	Introduction to axiomatic design	77
3.2	Independence axiom	93
3.3	Information axiom	95
3.4	Independence of the axioms	97
3.5	Most relevant theorems and corollaries	101
3.6	Design process	103
3.7	Example application in the aeronautical industry: main bearing configuration on a jet engine	105
3.8	Quantitative study of the design matrix	113
3.9	Example application: flow and temperature control	120
3.10	Notes	124
4	Metric design	133
4.1	Introduction to metric design	133
4.2	Quality loss	134
4.3	System design and parameter design	149

4.4	Tolerance design	152
4.5	Robust design	155
4.6	Cost-effectiveness of advanced design techniques	157
4.7	Example application	159
4.8	Notes	162
5	Reliability-based design	167
5.1	Objective of reliability calculations	167
5.2	Definition of reliability	168
5.3	Calculating the probability of failure	171
5.4	First-Order Reliability Model (FORM)	172
5.5	Semi-empirical reliability model	180
5.6	Example application: influence of radial clearance on bearing life with a surface fatigue failure mode	181
5.7	Notes	192
6	Entropy-based design	197
6.1	The Minimum Tolerance Theorem	197
6.2	The Linearity Theorem	198
6.3	Example application: conceptual design of a fuel supply system for gasoline engines	202
6.4	The principle of minimum generation of entropy and information	213
6.5	Notes	219
	Appendix: statistical concepts	223
A.1	Central limit theorem	224
A.2	Normal distribution	224
A.3	Sample of a population with a normal distribution	225
A.4	Component lifetime	226
A.5	Number of failed parts in an infinitesimal time interval	228

A.6	Definition of lifetime	229
A.7	Probability density function for the number of failures and lifetime	229
A.8	Design of experiments	234
A.9	Notes	250
