

8th Edition

Automotive Handbook

BOSCH

Invented for life

 **WILEY**

Contents

Basic principles of physics

Quantities and units	22
SI units	22
Legal units	24
Further units	30
Natural constants	33
Basic equations used in mechanics	34
Rectilinear and rotary motion	34
Transmission of force	34
Friction	37
Vibrations and oscillations	40
Terms	40
Equations	42
Vibration reduction	43
Modal analysis	44
Acoustics	46
General terminology	46
Measured quantities for noise emissions	48
Measured quantities for noise immissions (noise protection)	49
Perceived sound levels	50
Hydrostatics	52
Density and pressure	52
Buoyancy	52
Fluid mechanics	53
Basic principles	53
Basic equations of fluid mechanics	54
Discharge from a pressure vessel	54
Resistance of bodies submerged in a fluid flow	55
Thermodynamics	56
Enthalpy (heat content)	56
Laws of thermodynamics	58
Changes of state for gases	59
Electrical engineering	60
Electromagnetic fields	60
Electric field	60
Direct current and direct voltage	62
Time-dependent current	65
Magnetic field	66
Magnetic field and electric current	70
Wave propagation	74
Electric effects in metallic conductors	77

Electronics	80
Basic principles of semiconductor technology	80
Discrete semiconductor devices	83
Monolithic integrated circuits	95
Microprocessors in the ECU	96
Electrochemistry	99
Electrolytic conduction and electrolysis	99
Applications	100

Mathematics and methods

Mathematics	104
Number systems	104
Functions	104
Equations in the plane triangle	106
Complex numbers	107
Mathematical signs and symbols	107
Greek alphabet	107
Finite-element method	108
Applications	108
FEM examples	111
Control engineering	116
Terms and definitions	116
Control-engineering transfer elements	117
Designing a control task	118
Adaptive controllers	120

Materials

Chemical elements	122
Designations	122
Periodic table of elements	125
Substances	126
Substance terminology	126
Substance parameters	126
Properties of solids	128
Properties of liquids	132
Properties of water vapor	133
Properties of gases	134
Materials	135
Material groups	135
EN metallurgy standards	139
Properties of metallic materials	144
Casting and steel materials	144
Nonferrous metals, heavy metals	149
Nonferrous metals, light alloys	150
Sintered metals	151
Magnetic materials	154
Solders and filler materials	163
Electrical properties of materials	166

Properties of non-metallic materials	167	Machine parts	
Insulating materials	167	Springs	240
Ceramic materials	168	Basic principles	240
Laminates	170	Metal springs	241
Plastic molding compounds	171	Sliding bearings	246
Plastic codes with chemical names and trade names	178	Features	246
Automotive paints	180	Hydrodynamic sliding bearings	246
Heat treatment of metallic materials	182	Sintered metal sliding bearings	251
Hardness	182	Sliding-contact bearings	252
Heat-treatment processes	186	Roller bearings	255
Thermochemical treatment	191	Applications	255
Corrosion and corrosion protection	194	General principles	255
Corrosion processes	194	Selection of roller bearings	256
Types of corrosion	196	Calculation of load capacity	258
Corrosion testing	197	Gears and tooth systems	260
Corrosion protection	200	Overview of gears	260
Deposits and coatings	203	Starter-tooth designs	264
Deposits	203	American gear standards	265
Diffusion coatings	207	Calculation of load-bearing capacity	266
Conversion coatings	207	Gear materials	269
Operating fluids		Belt drives	270
Lubricants	208	Friction belt drives	270
Terms and definitions	208	Positive belt drives	274
Engine oils	213	Chain drives	278
Transmission lubricants	216	Overview	278
Lubricating oils	217	Chain designs	278
Lubricating greases	218	Sprockets	280
Fuels	220	Chain-tensioning and chain-guide elements	281
Characteristics	220	Joining and bonding techniques	
Gasolines	221	Detachable connections	282
Diesel fuels	224	Positive or form-closed joints	282
Alternative fuels	228	Frictional joints	286
Properties of liquid fuels and hydrocarbons	234	Threaded fasteners	292
Properties of gaseous fuels and hydrocarbons	235	Snap-on connections on plastic components	302
Brake fluids	236	Permanent joints	304
Coolants	238	Welding	304
		Soldering	308
		Adhesive technologies	309
		Riveting	310
		Penetration clinching	312

Vehicle physics

Basic terms of automotive engineering	314
Basic terms of vehicle handling	314
Motor-vehicle dynamics	324
Dynamics of linear motion	324
Adhesion to road surface	329
Accelerating and braking	331
Actions: Reaction, braking and stopping	331
Passing (overtaking)	333
Fuel consumption	335
Dynamics of lateral motion	338
Special operating dynamics for commercial vehicles	344
Operating-dynamics test procedures as per ISO	348
Aerodynamics	354
Aerodynamic parameters	354
Vehicle wind tunnels	355
Vehicle acoustics	360
Exterior noise measurements and statutory limits for motor vehicles	360
Engineering acoustics	361
Sound design	362
Internal-combustion engines	
Internal-combustion engines	366
Thermal engines	366
Cycles	368
Real cycles	373
Design and operating principle	442
Mixture formation, combustion, emissions	376
Gasoline engine	376
Diesel engine	386
Mixed forms and alternative operating strategies	391
Charge cycle and supercharging	392
Gas exchange	392
Variable valve timing	395
Supercharging processes	399
Exhaust-gas recirculation	403
Reciprocating-piston engine	404
Components	404
Reciprocating-piston engine types	418
Crankshaft-assembly design	419
Tribology and friction	427
Empirical values and data for calculation	431
Wankel rotary engine	442
Design and operating principle	442
Properties of a rotary engine	445

Engine cooling	446
Air cooling	446
Water cooling	446
Intercooling (charge-air cooling)	450
Oil and fuel cooling	451
Cooling-module technology	452
Cooling-system technology	453
Intelligent thermal management	453
Exhaust-gas cooling	455
Engine lubrication	456
Force-feed lubrication system	456
Components	456
Air filtration	459
Air impurities	459
Air filters (air cleaners)	459
Turbochargers and superchargers	462
Superchargers (mechanically driven)	462
Pressure-wave superchargers	465
Exhaust-gas turbochargers	467
Complex supercharging systems	475
Exhaust-gas system	480
Design and purpose	480
Exhaust manifold	481
Catalytic converter	482
Particulate filter	483
Mufflers	483
Connecting elements	485
Acoustic tuning devices	486
Commercial-vehicle exhaust-gas systems	487
Emission-control and diagnosis legislation	
Emission-control legislation	488
Overview	488
CARB legislation (passenger cars/light commercial vehicles)	490
EPA legislation (passenger cars/light commercial vehicles)	493
EU legislation (passenger cars/light commercial vehicles)	495
Japanese legislation (passenger cars/light commercial vehicles)	498
US legislation (heavy commercial vehicles)	499
EU legislation (heavy commercial vehicles)	500
Japanese legislation (heavy commercial vehicles)	502

US test cycles (passenger cars/ light commercial vehicles)	503	Mixture formation	559
European test cycle (passenger cars/ light commercial vehicles)	505	Basic principles	559
Japanese test cycle (passenger cars/ light commercial vehicles)	506	Mixture-formation systems	560
Test cycles for heavy commercial vehicles	507	Intake-manifold injection	561
Exhaust-gas measuring techniques	510	Gasoline direct injection	563
Exhaust-gas test on chassis dynamometers	510	Mixture-formation components	565
Exhaust-gas measuring devices	513	Ignition	570
Diesel smoke-emission test	516	Basic principles	570
Evaporative-emissions test	518	Moment of ignition	571
Diagnostics	520	Ignition systems	575
Introduction	520	Ignition coil	577
Monitoring in driving mode	520	Spark plug	581
On-Board Diagnostics (OBD)	522	Catalytic exhaust-gas treatment	586
OBD functions	526	Catalytic converter	586
OBD requirements for heavy commercial vehicles	529	λ control	590
Workshop diagnostics	531	Alternative gasoline-engine operation	
ECU diagnostics and Service Information System	533	LPG operation	592
Management for spark-ignition engines		Applications	592
Management for spark-ignition engines	534	Design	592
Description of the engine management system	534	LPG systems	594
System overview	535	Engines fueled by natural gas	596
Versions of Motronic	539	Applications	596
Cylinder charge	542	Design	596
Component parts	542	Components	599
Controlling the air charge	543	Management for diesel engines	
Fuel supply	546	Management for diesel engines	602
Fuel supply and delivery with manifold injection	546	Description of the engine management system	602
Fuel supply and delivery with gasoline direct injection	547	Electronic Diesel Control	603
Evaporative-emissions control system	549	Fuel supply system (low-pressure stage)	606
Fuel filter	550	Fuel supply and delivery	606
Electric fuel pump	551	Fuel filtering	610
High-pressure pumps for gasoline direct injection	553	Common-rail injection system	612
Fuel rail	557	System overview	612
Fuel-pressure regulator	558	Injectors	616
Fuel-pressure attenuator	558	High-pressure pumps	621
		Rail	625
		Time-controlled single-cylinder pump system	626
		Unit-injector system for passenger cars	626
		Unit-injector system for commercial vehicles	627
		Unit-pump system for commercial vehicles	628
		Components	629

12 Contents

Diesel distributor injection pumps	630	Wheels	722
Axial-piston distributor pumps	630	Passenger-car wheels	722
Radial-piston distributor pumps	633	Commercial-vehicle wheels	728
Fuel-injection system	635	Tires	732
Start-assist systems	636	Tire categories	732
Preheating systems	636	Tire design	732
Exhaust-gas treatment	639	Tire designation	734
Catalytic converters	639	Tire applications	737
Particulate filter	642	Tire traction	738
Alternative drives		Tire-pressure monitoring system	746
Hybrid drives	646	Steering	748
Features	646	Definitions for motor-vehicle steering systems	748
Functions	647	Steering-system requirements	748
Functional classification	648	Types of steering box	750
Drive configurations	649	Power-assisted steering systems for passenger cars	751
Control of hybrid vehicles	654	Power-assisted steering systems for commercial vehicles	757
Regenerative braking system	657	Brake systems	760
Fuel cells for the vehicle drive	658	Definitions and principles	760
Functioning principle	658	Legal regulations	765
Functioning principle of the fuel-cell system	660	Structure and organization of brake systems	774
Functioning principle of the drivetrain	662	Brake systems for passenger cars	776
Drivetrain		Service brake system	776
Drivetrain	664	Electromechanical parking brake system	778
Overview	664	Electrohydraulic brake	780
Drivetrain elements	666	Purpose and function	780
Power take-up elements	667	Design	782
Multi-speed gearbox	669	Operating principle	782
Manually shifted transmissions	670	Brake systems for commercial vehicles	784
Automatic transmissions	672	System overview	784
Continuously variable transmissions	678	Components of commercial-vehicle brake systems	787
Final-drive units	679	Electronically controlled brake system	794
All-wheel drive and transfer case	682	Continuous-operation brake systems	798
Chassis systems		Wheel brakes	802
Chassis systems	684	Disk brakes	802
Basic principles	684	Drum brakes	804
Suspension	694	Chassis control and active safety	
Basic principles	694	Antilock braking system	806
Types of spring	697	Function and requirements	806
Suspension systems	702	Operating principle	806
Shock absorbers and vibration absorbers	706	ABS system variants	810
Shock absorbers	706	ABS versions	812
Vibration absorbers	713	Antilock braking system for commercial vehicles	814
Wheel suspensions	714		
Basic principles	714		
Kinematics and elastokinematics	714		
Basic categories of wheel suspensions	716		

Traction control system	818	Automotive windshield and window glass	914
Function and requirements	818	The material properties of glass	914
TCS control loops	818	Automotive glazing	915
Driving-dynamics control system	822	Functional design glazing	916
Function	822	Windshield, rear-window and headlamp cleaning systems	920
Requirements	823	Windshield wiper systems	920
Operating principle	824	Rear-window wiper systems	926
Typical driving maneuver	824	Windshield and rear-window washer systems	927
Structure of the overall system	825	Headlamp washer systems	927
System components	834	Passive safety	
Special Electronic Stability Program for commercial vehicles	837	Occupant-protection systems	928
Supplementary functions (automatic brake-system operations)	842	Seat belts and seat-belt pretensioners	928
Integrated driving-dynamics control systems	846	Airbag	931
Overview	846	Rollover protection systems	934
Functions	846	Components	934
System architecture	849	Further developments	936
Vehicle bodies		Vehicle security systems	
Road-vehicle systematics	852	Locking systems	938
Classification	853	Function	938
Vehicle bodies, passenger cars	854	Structure (side door as example)	939
Main dimensions	854	Double-locking functions	941
Body design	856	Technology	945
Aerodynamics	857	Theft-deterrent systems	946
Aeroacoustics	859	Regulations	946
Body	860	System design	946
Safety	864	Automotive electrics	
Vehicle bodies, commercial vehicles	868	Vehicle electrical systems	948
Classification	868	Electrical power supply	948
Light utility vans	869	Electrical-system structures	953
Medium- and heavy-duty trucks and tractor units	869	Electrical-system parameters	955
Buses	872	Electrical energy management	957
Passive safety in trucks	874	Starter batteries	962
Lighting equipment	876	Requirements	962
Functions	876	Battery design	963
Regulations and equipment	877	Charging and discharging	964
Light sources	878	Battery characteristics	965
Main-light functions	879	Battery types	966
Main-light functions for Europe	882	Using the battery	968
Main-light functions for the USA	885	Electrical machines	970
Definitions and terms	887	Systematics of rotating electrical machines	970
Technical design variations of headlamps	888	Direct-current machines	970
Installation and regulations for signal lamps	899	Asynchronous machine	975
Technical design variations for lamps	903	Synchronous machine	977
Headlight leveling control	907	Three-phase current system	982
Headlamp adjustment	908		

14 Contents

Alternators	986	Automotive networking	1064
Electric power generation	986	Bus systems	1064
Operating conditions	991	Technical principles	1065
Efficiency	992	Buses in motor vehicles	1071
Types of claw-pole alternator	993	CAN	1071
Starting systems	996	FlexRay	1075
Starter	996	LIN	1079
Triggering the starter	1000	Ethernet, IP	1082
Actuators	1002	PSI5	1083
Overview	1002	MOST bus	1085
Electrodynamic and		Architecture of electronic systems	1090
electromagnetic converters	1002	Overview	1090
Piezo actuators	1005	Architecture methods	
Fluid-mechanical actuators	1007	of electronic systems	1093
Wiring harnesses and		Sensors	1100
plug-in connections	1008	Basic principles	1100
Wiring harnesses	1008	Position sensors	1105
Plug-in connections	1010	Speed and rpm sensors	1121
Electromagnetic compatibility (EMC)		Acceleration and	
and interference suppression	1014	vibration sensors	1126
Requirements	1014	Pressure sensors	1130
Sources of interference	1014	Flowmeters	1134
Potentially susceptible devices	1017	Gas sensors, concentration	
Interference coupling	1018	sensors	1137
Electrostatic discharge	1019	Temperature sensors	1140
Measuring technology	1020	Force and torque sensors	1143
Regulations and standards	1021	Optoelectronic sensors	1150
Symbols and circuit diagrams	1022	Sensors for driver-assistance	
Circuit symbols	1022	systems	1154
Circuit diagrams	1029	Mechatronics	1164
Terminal designations	1041	Mechatronic systems and	
Automotive electronics		components	1164
Automotive software engineering	1044	Development methodology	1165
Motivation	1044	Outlook	1168
Design of software		Comfort and convenience	
in motor vehicles	1045	Passenger-compartment	
Important standards for software		climate control	1170
in motor vehicles	1045	Climate-control requirements	1170
The development process	1048	A/C-unit design and operating	
Quality assurance in		principle	1170
software development	1052	Climate-control systems	1173
Sequences of software		Climate control for hybrid and	
development in motor vehicles	1052	electric vehicles	1174
Modeling and simulation		Auxiliary heater systems	1176
of software functions	1054	Comfort and convenience systems	
Design and implementation		in the door and roof areas	1180
of software functions	1057	Power-window systems	1180
Integration and testing of		Roof systems	1181
software and ECUs	1058	Comfort and convenience functions	
Calibration of software functions	1060	in the passenger compartment	1182
Outlook	1061	Electrical seat adjustment	1182

User interfaces, telematics and multimedia

Display and control	1184
Interaction channels	1184
Instrumentation	1185
Radio and TV reception in motor vehicles	1192
Wireless signal transmission	1192
Radio tuners	1195
Traffic telematics	1199
EU recording equipment	1200
Legal regulations	1200
Design variations	1200

Driver-assistance systems

Driver-assistance systems	1202
Parking systems	1206
Parking aid with ultrasonic sensors	1206
Parking aid assistant	1209
Vehicle navigation	1210
Navigation systems	1210
Functions of navigation	1210
Digital map	1213
Adaptive Cruise Control	1214
Function	1214
Design and function	1214
Control algorithms	1216
Area of application and further development	1217
Predictive emergency-braking systems	1220
Video-based driver-assistance systems	1222
Lane departure warning and lane keeping support	1222
Road-sign recognition	1223
Night-vision systems	1224
Applications	1224
Far-infrared systems	1224
Near-infrared systems	1225

Appendices

Technical terms	1228
Abbreviations	1258
