TABLE OF CONTENTS

Preface	xii
1 Setting the Stage for the Study of Dynamics.....	1
1.1 A Brief History of Dynamics	1
Isaac Newton (1643–1727) 3	
Leonhard Euler (1707–1783) 6	
1.2 Fundamental Concepts	8
Space and time 8	
Force, mass, and inertia 8	
Particle and rigid body 9	
Vectors and their Cartesian representation 10	
Useful vector “tips and tricks” 12	
Units 14	
1.3 Dynamics and Engineering Design	25
System modeling 26	
2 Particle Kinematics.....	29
2.1 Position, Velocity, Acceleration, and Cartesian Coordinates ...	29
Motion tracking along a racetrack 29	
Position vector 31	
Trajectory 31	
Velocity vector and speed 31	
Acceleration vector 33	
Cartesian coordinates 34	
2.2 Elementary Motions	55
Driving down a city street 55	
Rectilinear motion relations 56	
Circular motion and angular velocity 59	
2.3 Projectile Motion	73
Trajectory of a pumpkin used as a projectile 73	
Projectile motion 74	
2.4 The Time Derivative of a Vector.....	88
Time derivative of a unit vector 91	
Time derivative of an arbitrary vector 92	
2.5 Planar Motion: Normal-Tangential Components	104
Car racing and the <i>shape</i> of the track 104	
Geometry of curves 105	
Normal-tangential components 106	

2.6	Planar Motion: Polar Coordinates	118
	Tracking an airplane	118
	Polar coordinates and position, velocity, and acceleration	118
	Relation between path and polar components for circular motion	120
2.7	Relative Motion Analysis and Differentiation of Geometrical Constraints	135
	Hitting a moving target	135
	Relative motion	135
	Differentiation of geometrical constraints	137
2.8	Motion in Three Dimensions	154
	Skydiving acrobatics	154
	Position, velocity, & acceleration in cylindrical coordinates	154
	Skydiving acrobatics revisited	155
	Position, velocity, & acceleration in spherical coordinates	156
	Position, velocity, & acceleration in Cartesian coordinates	158
2.9	Chapter Review	168
3	Force and Acceleration Methods for Particles	183
3.1	Rectilinear Motion	183
	A chameleon capturing an insect	183
	Friction	185
	Springs	187
	Inertial reference frames	188
	Governing equations, equations of motion, and degrees of freedom	189
	A recipe for applying Newton's second law	191
3.2	Curvilinear Motion	209
	Newton's second law in 2D and 3D component systems	209
	Coriolis component of acceleration	222
3.3	Systems of Particles	232
	Engineering materials one atom at a time	232
	Newton's second law for systems of particles	235
3.4	Chapter Review	253
4	Energy Methods for Particles	259
4.1	Work-Energy Principle for a Particle	259
	Relating changes in speed to changes in position	259
	Work-energy principle and its relation with $\vec{F} = m\vec{a}$	261
	Work of a force	262
4.2	Conservative Forces and Potential Energy	276
	Lifting people up a mountain	276
	Work of a central force	277
	Conservative forces and potential energy	279
	Work-energy principle for any type of force	282
4.3	Work-Energy Principle for Systems of Particles	302
	Determining how far two stacked books slide on a table	302
	Internal work and work-energy principle for a system	303
	Kinetic energy for a system of particles	305

4.4	Power and Efficiency	320
	Power developed by a force	320
	Efficiency	320
4.5	Chapter Review	326
5	Momentum Methods for Particles	333
5.1	Momentum and Impulse	333
	Automobile collision reconstruction	333
	Impulse-momentum principle	334
	Conservation of linear momentum	337
5.2	Impact	356
	A collision between two cars	356
	Impulsive forces	357
	Coefficient of restitution	360
	Line of impact	362
	Direct central impact	363
	Oblique central impact	364
	Impact and energy	365
	Constrained impact	365
5.3	Angular Momentum	388
	A skater's spin	388
	Definition of angular momentum of a particle	389
	Angular impulse-momentum principle for a particle	389
	Angular impulse-momentum for a system of particles	391
	Euler's first and second laws of motion	394
5.4	Orbital Mechanics	410
	Determination of the orbit	410
	Energy considerations	416
5.5	Mass Flows	426
	Steady flows	426
	Variable mass flows and propulsion	429
5.6	Chapter Review	446
6	Planar Rigid Body Kinematics	459
6.1	Fundamental Equations, Translation, and Rotation About a Fixed Axis	459
	Crank, connecting rod, and piston motion	459
	Qualitative description of rigid body motion	460
	General motion of a rigid body	461
	Elementary rigid body motions: translations	463
	Elementary rigid body motions: rotation about a fixed axis	464
	Planar motion in practice	465
6.2	Planar Motion: Velocity Analysis	477
	Vector approach	477
	Rolling without slip: velocity analysis	477
	Differentiation of constraints	478
	Instantaneous center of rotation	479

6.3	Planar Motion: Acceleration Analysis.....	498
	Vector approach	498
	Differentiation of constraints	499
	Rolling without slip: acceleration analysis	499
6.4	Rotating Reference Frames	517
	Motion of an airplane propeller blade	517
	Sliding contacts	517
	The general kinematic equations for the motion of a point relative to a rotating reference frame	519
6.5	Chapter Review	536
7	Newton-Euler Equations for Planar Rigid Body Motion.....	545
7.1	Bodies Symmetric with Respect to the Plane of Motion.....	545
	A motorcycle popping a wheelie	545
	Linear momentum: translational equations	548
	Angular momentum: rotational equations	548
	Graphical interpretation of the equations of motion	555
8	Energy and Momentum Methods for Rigid Bodies.....	591
8.1	Work-Energy Principle for Rigid Bodies	591
	Flywheels as energy storage devices	591
	Kinetic energy of rigid bodies in planar motion	592
	Work-energy principle for a rigid body	594
	Work done on rigid bodies	595
	Potential energy and conservation of energy	596
	Work-energy principle for systems	598
	Power	598
8.2	Momentum Methods for Rigid Bodies	625
	Rigid body modeling in crash reconstructions	625
	Impulse-momentum principle for a rigid body	625
	Angular impulse-momentum principle for a rigid body	626
8.3	Impact of Rigid Bodies	646
	Collision of two bumper cars	646
	Rigid body impact: basic nomenclature and assumptions	648
	Classification of impacts	649
	Central impact	649
	Eccentric impact	651
	Constrained eccentric impact	653
8.4	Chapter Review	666
9	Mechanical Vibrations	673
9.1	Undamped Free Vibration	673
	Oscillation of a railcar after coupling	673
	Standard form of the harmonic oscillator	675
	Linearizing nonlinear systems	676
	Energy method	677

9.2	Undamped Forced Vibration	692
	Vibration of an unbalanced motor	692
	Standard form of the forced harmonic oscillator	693
9.3	Viscously Damped Vibration	704
	Viscously damped free vibration	704
	Viscously damped forced vibration	707
9.4	Chapter Review	722
A	Mass Moments of Inertia	731
B	Angular Momentum of a Rigid Body	741
C	Answers to Selected Problems	747
	Index	751
