Series Preface	ix
Preface	xi
Acknowledgments	xiv
Credits	xv

Chapter 1	Muscle Fibers, Motor Units, and Motoneurons	1
	Muscle Heterogeneity	2
	Orderly Motor Unit Recruitment	7
	Smaller Motoneurons Are More Excitable.	9
	Membrane Resistivity and Motoneuron Size	9
	Other Factors Determining Action Potential Generation	11
	Minimal Firing Rates and Afterhyperpolarization Durations	12
	Motoneuron Current–Frequency Relationship and Excitability.	15
	Late Adaptation	17
	Motoneuron PICs	20
	Summary	23
Chapter 2	Motor Unit Recruitment During Different Types of Movements	25
	Measuring Human Motor Unit Recruitment	25
	Influence of Task	27
	Slow-Ramp Isometric Contractions	28
	Maintained Isometric Contractions	32
	Isometric Contractions in Various Directions	34
	Isometric Contractions Versus Movements	35
	Lengthening Contractions.	38
	Cocontraction of Agonists and Antagonists	40
	Unilateral Versus Bilateral Contractions	40
	Rhythmic Complex Contractions	41
	Maximal Voluntary Contractions	42
	Summary	44
Chapter 3	Muscle Blood Flow and Metabolism.	46
	Muscle Blood Flow	46
	Muscle Metabolism	53
	Summary	60
Chapter 4	Peripheral Factors in Neuromuscular Fatigue.	63
	Intramuscular Factors and Muscle Force	64
	Involvement of Structures Other Than Muscle.	67
	Research From Animal Experiments.	77
	Summary	80

Chapter 5	Central Factors in Neuromuscular Fatigue	83
	Motoneuron Activity During Sustained Contractions	83
	Isometric Versus Anisometric Tasks.	98
	Rotation of Motor Units?	99
	Summary	99
Chapter 6	Muscular Mechanisms in Aerobic Endurance Training	101
	Chronic Muscle Stimulation	102
	Coordination of Muscle Protein Systems	104
	Pretranslational Control	106
	Translational Control.	109
	Posttranslational Modifications	110
	Simultaneous Expression of Isoforms	112
	Adaptations Can Occur Ex Vivo.	112
	Adaptations Appear in a Specific Sequence	112
	Thresholds of Activity for Adaptation	114
	Chronic Stimulation and Atrophy	115
	Metabolic Signals and the Adaptive Response	117
	Degenerative and Regenerative Processes	122
	Summary	122
Chapter 7	Neural Mechanisms in Aerobic Endurance Training	125
	Adaptation of the Neuromuscular Junction	125
	Responses of Motoneurons	130
	Adaptations of Spinal Cord Circuits	134
	Summary	139
Chapter 8	Muscle Molecular Mechanisms in Strength Training	141
	Acute Responses in Protein Synthesis and Degradation	142
	Connective Tissue Responses	155
	Role of Muscle Damage	156
	Role of Dietary Supplements	157
	Summary	158
Chapter 9	Muscle Property Changes in Strength Training	161
	Increased Muscle Fiber Cross-Sectional Area	161
	Fiber Type Composition.	162
	Muscle Fiber Number	163
	Muscle Composition	165
	Muscle Architecture	166
	Muscle Fiber Ultrastructure	166
	Evoked Isometric Contractile Properties	167
	Changes in Muscle Force, Velocity, and Power.	169
	Fatigue Resistance	171
	Role of Eccentric Contractions	171
	Summary	173

Chapter 10	Neural Mechanisms in Strength Training	175
	Gains in Strength Versus Muscle Girth	175
	Strength Gains Show Task Specificity	176
	Surface EMG Response During MVC	178
	Imaginary Strength Training	179
	Reflex Adaptations	179
	Cross Education	181
	Decreased Activation of Antagonists	183
	Changes in Motor Unit Recruitment	183
	Changes in Motor Cortex	186
	Summary	186
	References	189
	Index	225
	About the Author	229
