

Chemical Reactor Analysis and Design

Froment | Bischoff | De Wilde

3rd Edition

Contents — Chemical Reactor Analysis and Design, Third edition

G.F. Froment, K.B. Bischoff, J. De Wilde

Chapter 1: Elements of Reaction Kinetics

1.1	Definitions of Chemical Rates	2
1.1.1	Rates of Disappearance of Reactants and of Formation of Products	2
1.1.2	The Rate of a Reaction	3
1.2	Rate Equations	5
1.2.1	General Structure	5
1.2.2	Influence of Temperature	7
	Example 1.2.2.A Determination of the Activation Energy	8
1.2.3	Typical Rate Equations for Simple Reactions	9
1.2.3.1	Reversible First-Order Reactions	9
1.2.3.2	Second-Order Reversible Reactions	10
1.2.3.3	Autocatalytic Reactions	11
1.2.4	Kinetic Analysis	13
1.2.4.1	The Differential Method of Kinetic Analysis	13
1.2.4.2	The Integral Method of Kinetic Analysis	14
1.3	Coupled Reactions	17
1.3.1	Parallel Reactions	17
1.3.2	Consecutive Reactions	19
1.3.3	Mixed Parallel-Consecutive Reactions	21
1.4	Reducing the Size of Kinetic Models	21
1.4.1	Steady State Approximation	21
1.4.2	Rate Determining Step of a Sequence of Reactions	22
1.5	Bio-Kinetics	23
1.5.1	Enzymatic Kinetics	23
1.5.2	Microbial Kinetics	26
1.6	Complex Reactions	30
1.6.1	Radical Reactions for the Thermal Cracking for Olefins Production	30
	Example 1.6.1.A Activation Energy of a Complex Reaction	32
1.6.2	Free Radical Polymerization Kinetics	38
1.7	Modeling the Rate Coefficient	43

1.7.1	Transition State Theory	43
1.7.2	Quantum Mechanics. The Schrödinger Equation	48
1.7.3	Density Functional Theory	49

Chapter 2: Kinetics of Heterogeneous Catalytic Reactions

2.1	Introduction	61
2.2	Adsorption on Solid Catalysts	67
2.3	Rate Equations	71
2.3.1	Single Reactions	72
	Example 2.3.1.A Competitive Hydrogenation Reactions	76
2.3.2	Coupled Reactions	81
2.3.3	Some Further Thoughts on the Hougen-Watson Rate Equations	86
2.4	Complex Catalytic Reactions	87
2.4.1	The Kinetic Modeling of Commercial Catalytic Processes	87
2.4.2	Generation of the Network of Elementary Steps	89
2.4.3	Modeling of the Rate Parameters	92
	2.4.3.1 The Single Event Concept	92
	2.4.3.2 The Evans-Polanyi Relationship for the Activation Energy	94
2.4.4	Application to Hydrocracking	96
2.5	Experimental Reactors	99
2.6	Model Discrimination and Parameter Estimation	104
2.6.1	The Differential Method of Kinetic Analysis	104
2.6.2	The Integral Method of Kinetic Analysis	110
2.6.3	Parameter Estimation and Statistical Testing of Models and Parameters in Single Reactions	112
	2.6.3.1 Models That Are Linear in the Parameters	112
	2.6.3.2 Models That Are Nonlinear in the Parameters	117
2.6.4	Parameter Estimation and Statistical Testing of Models and Parameters in Multiple Reactions	119
	Example 2.6.4.A Benzothiophene Hydrogenolysis	123
2.6.5	Physicochemical Tests on the Parameters	126
2.7	Sequential Design of Experiments	126
2.7.1	Sequential Design for Optimal Discrimination between Rival Models	127
	2.7.1.1 Single Response Case	127
	Example 2.7.1.1.A Model Discrimination in the	130

	Dehydrogenation of 1-Butene into Butadiene	
Example 2.7.1.1.B	Ethanol Dehydrogenation: Sequential Discrimination using the Integral Method of Kinetic Analysis	133
2.7.1.2	Multiresponse Case	137
2.7.2	Sequential Design for Optimal Parameter Estimation	138
2.7.2.1	Single Response Models	138
2.7.2.2	Multiresponse Models	139
Example 2.7.2.2.A	Sequential Design for Optimal Parameter Estimation in Benzothiophene Hydrogenolysis	139
2.8	Expert Systems in Kinetics Studies	142

Chapter 3: Transport Processes with Reactions Catalyzed by Solids

PART ONE INTERFACIAL GRADIENT EFFECTS

3.1	Reaction of a Component of a Fluid at the Surface of a Solid	154
3.2	Mass and Heat Transfer Resistances	156
3.2.1	Mass Transfer Coefficients	156
3.2.2	Heat Transfer Coefficients	158
3.2.3	Multicomponent Diffusion in a Fluid	160
	Example 3.2.3.A Use of a Mean Binary Diffusivity	162
3.3	Concentration or Partial Pressure and Temperature Differences Between Bulk Fluid and Surface of a Catalyst Particle	163
	Example 3.3.A Interfacial Gradients in Ethanol Dehydrogenation Experiments	165

PART TWO INTRAPARTICLE GRADIENT EFFECTS

3.4	Molecular, Knudsen, and Surface Diffusion in Pores	172
3.5	Diffusion in a Catalyst Particle	176
3.5.1	A Pseudo-Continuum Model	176
3.5.1.1	Effective Diffusivities	176
3.5.1.2	Experimental Determination of Effective Diffusivities of a Component and of the Tortuosity	177
	Example 3.5.1.2.A Experimental Determination of the	178

	Effective Diffusivity of a Component and of the Catalyst Tortuosity by Means of the Packed Column Technique	
	Example 3.5.1.2.B Application of the Pellet Technique	180
3.5.2	Structure Models	180
	3.5.2.1 The Random Pore Model	181
	3.5.2.2 The Parallel Cross-Linked Pore Model	182
3.5.3	Network Models	184
	3.5.3.1 A Bethe Tree Model	184
	3.5.3.2 Disordered Pore Media	188
	Example 3.5.A Optimization of Catalyst Pore Structure	189
3.5.4	Diffusion in Zeolites. Configurational Diffusion	190
	3.5.4.1 Molecular Dynamics Simulation	191
	3.5.4.2 Dynamic Monte-Carlo Simulation	193
3.6	Diffusion and Reaction in a Catalyst Particle. A Continuum Model	193
	3.6.1 First-Order Reactions. The Concept of Effectiveness Factor	193
	3.6.2 More General Rate Equations. The Generalized Modulus	197
	Example 3.6.2.A Application of Generalized Modulus for Simple Rate Equations	200
	3.6.3 Multiple Reactions	201
3.7	Falsification of Rate Coefficients and Activation Energies by Diffusion Limitations	204
	Example 3.7.A Effectiveness Factors for Sucrose Inversion in Ion Exchange Resins	206
3.8	Influence of Diffusion Limitations on the Selectivities of Coupled Reactions	207
3.9	Criteria for the Importance of Intraparticle Diffusion Limitations	213
	Example 3.9.A Application of the Extended Weisz-Prater Criterion	217
3.10	Multiplicity of Steady States in Catalyst Particles	218
3.11	Combination of External and Internal Diffusion Limitations	219
3.12	Diagnostic Experimental Criteria for the Absence of Internal and External Mass Transfer Limitations	221
3.13	Nonisothermal Particles	223

3.13.1	Thermal Gradients Inside Catalyst Particles	223
3.13.2	External and Internal Temperature Gradients	225
	Example 3.13.2.A Temperature Gradients Inside the Catalyst Particles in Benzene Hydrogenation	228

Chapter 4: Noncatalytic Gas-Solid Reactions

4.1	A Qualitative Discussion of Gas-Solid Reactions	240
4.2	General Model with Interfacial and Intraparticle Gradients	243
4.3	Heterogeneous Model with Shrinking Unreacted Core	252
	Example 4.3.A Combustion of Coke within Porous Catalyst Particles	255
4.4	Models Accounting Explicitly for the Structure of the Solid	259
4.5	On the Use of More Complex Kinetic Equations	264

Chapter 5: Catalyst Deactivation

5.1	Types of Catalyst Deactivation	270
	5.1.1 Solid-State Transformations	270
	5.1.2 Poisoning	271
	5.1.3 Coking	271
5.2	Kinetics of Catalyst Poisoning	271
	5.2.1 Introduction	271
	5.2.2 Kinetics of Uniform Poisoning	273
	5.2.3 Shell-Progressive Poisoning	275
	5.2.4 Effect of Shell-Progressive Poisoning on the Selectivity of Simultaneous Reactions	280
5.3	Kinetics of Catalyst Deactivation by Coke Formation	285
	5.3.1 Introduction	285
	5.3.2 Kinetics of Coke Formation	288
	5.3.2.1 Deactivation Functions	288
	5.3.2.2 Catalyst Deactivation by Site Coverage Only	288
	5.3.2.3 Catalyst Deactivation by Site Coverage and Pore Blockage	294
	5.3.2.4 Deactivation by Site Coverage and Pore Blockage in the Presence of Diffusion Limitations	296
	5.3.2.5 Deactivation by Site Coverage, Growth of Coke, and Blockage in Networks of Pores	298

5.3.3	Kinetic Analysis of Deactivation by Coke Formation	299
	Example 5.3.3.A Application to Industrial Processes: Coke Formation in the Dehydrogenation of 1-Butene into Butadiene	303
	Example 5.3.3.B Application to Industrial Processes: Rigorous Kinetic Equations for Catalyst Deactivation by Coke Deposition in the Dehydrogenation of 1-Butene into Butadiene	309
	Example 5.3.3.C Application to Industrial Processes: Coke Formation and Catalyst Deactivation in Steam Reforming of Natural Gas	312
	Example 5.3.3.D Application to Industrial Processes: Coke Formation in the Catalytic Cracking of Vacuum Gas Oil	316
5.3.4	Conclusions	318

Chapter 6: Gas-Liquid Reactions

6.1	Introduction	322
6.2	Models for Transfer at a Gas-Liquid Interface	323
6.3	Two-Film Theory	326
	6.3.1 Single Irreversible Reaction with General Kinetics	326
	6.3.2 First-Order and Pseudo-First-Order Irreversible Reactions	328
	6.3.3 Single, Instantaneous, and Irreversible Reactions	332
	6.3.4 Some Remarks on Boundary Conditions and on Utilization and Enhancement Factors	337
	6.3.5 Extension to Reactions with Higher Orders	340
	6.3.6 Coupled Reactions	342
6.4	Surface Renewal Theory	346
	6.4.1 Single Instantaneous Reactions	347
	6.4.2 Single Irreversible (Pseudo)-First-Order Reactions	351
	6.4.3 Surface Renewal Models with Surface Elements of Limited Thickness	355
6.5	Experimental Determination of the Kinetics of Gas-Liquid Reactions	356
	6.5.1 Introduction	356
	6.5.2 Determination of k_L and A_V	357

6.5.3	Determination of k_G and A_V	358
6.5.4	Specific Equipment	359

Chapter 7: The Modeling of Chemical Reactors

7.1	Approach	366
7.2	Aspects of Mass, Heat and Momentum Balances	367
7.3	The Fundamental Model Equations	369
7.3.1	The Species Continuity Equations	369
7.3.1.1	A General Formulation	369
7.3.1.2	Specific Forms	373
7.3.2	The Energy Equation	377
7.3.2.1	A General Formulation	377
7.3.2.2	Specific Forms	378
7.3.3	The Momentum Equations	380

Chapter 8: The Batch and Semibatch Reactors

	Introduction	384
8.1	The Isothermal Batch Reactor	385
	Example 8.1.A Example of Derivation of a Kinetic Equation from Batch Data	388
	Example 8.1.B Styrene Polymerization in a Batch Reactor	390
	Example 8.1.C Production of Gluconic Acid by Aerobic Fermentation of Glucose	394
8.2	The Nonisothermal Batch Reactor	396
	Example 8.2.A Decomposition of Acetylated Castor Oil Ester	399
8.3	Semibatch Reactor Modeling	402
	Example 8.3.A Simulation of Semibatch Reactor Operation (with L.H. Hosten [†])	403
8.4	Optimal Operation Policies and Control Strategies	407
8.4.1	Optimal Batch Operation Time	407
	Example 8.4.1.A Optimum Conversion and Maximum Profit for a First-Order Reaction	410
8.4.2	Optimal Temperature Policies	411
	Example 8.4.2.A Optimal Temperature Trajectories for First-Order Reversible Reactions	412
	Example 8.4.2.B Optimum Temperature Policies for Consecutive and Parallel Reactions	418

Chapter 9: The Plug Flow Reactor

9.1	The Continuity, Energy, and Momentum Equations	427
9.2	Kinetic Studies Using a Tubular Reactor with Plug Flow	432
9.2.1	Kinetic Analysis of Isothermal Data	432
9.2.2	Kinetic Analysis of Nonisothermal Data	435
9.3	Design and Simulation of Tubular Reactors with Plug Flow	438
9.3.1	Adiabatic Reactor with Plug Flow	439
9.3.2	Design and Simulation of Non-Isothermal Cracking Tubes for Olefins Production	441

Chapter 10: The Perfectly Mixed Flow Reactor

10.1	Introduction	453
10.2	Mass and Energy Balances	454
10.2.1	Basic Equations	454
10.2.2	Steady-State Reactor Design	455
10.3	Design for Optimum Selectivity in Simultaneous Reactions	461
10.3.1	General Considerations	461
10.3.2	Polymerization in Perfectly Mixed Flow Reactors	468
10.4	Stability of Operation and Transient Behavior	471
10.4.1	Stability of Operation	471
10.4.2	Transient Behavior	478
Example 10.4.2.A	Temperature Oscillations in a Mixed Reactor for the Vapor-Phase Chlorination of Methyl Chloride	481

Chapter 11: Fixed Bed Catalytic Reactors

PART ONE INTRODUCTION

11.1	The Importance and Scale of Fixed Bed Catalytic Processes	493
11.2	Factors of Progress: Technological Innovations and Increased Fundamental Insight	494
11.3	Factors Involved in the Preliminary Design of Fixed Bed Reactors	495
11.4	Modeling of Fixed Bed Reactors	503

PART TWO PSEUDOHOMOGENEOUS MODELS

11.5	The Basic One-Dimensional Model	505
11.5.1	Model Equations	505

Example 11.5.1.A	Calculation of Pressure Drop in Packed Beds	510
11.5.2	Design of a Fixed Bed Reactor According to the One-Dimensional Pseudohomogeneous Model	510
11.5.3	Runaway Criteria	513
Example 11.5.3.A	Application of the First Runaway Criterion of Van Welsenaere and Froment	519
11.5.4	The Multibed Adiabatic Reactor	522
11.5.5	Fixed Bed Reactors with Heat Exchange Between the Feed and Effluent or Between the Feed and Reacting Gas. "Autothermal Operation"	530
11.5.6	Nonsteady-State Behavior of Fixed Bed Catalytic Reactors Due to Catalyst Deactivation	548
11.6	One-Dimensional Model with Axial Mixing	559
11.7	Two-Dimensional Pseudohomogeneous Models	565
11.7.1	The Effective Transport Concept	565
11.7.2	Continuity and Energy Equations	571
11.7.3	Design or Simulation of a Fixed Bed Reactor for Catalytic Hydrocarbon Oxidation	572
11.7.4	An Equivalent One-Dimensional Model	578
11.7.5	A Two-Dimensional Model Accounting for Radial Variations in the Bed Structure	579
11.7.6	Two-Dimensional Cell Models	583
 PART THREE HETEROGENEOUS MODELS		
11.8	One-Dimensional Model Accounting for Interfacial Gradients	585
11.8.1	Model Equations	585
11.8.2	Simulation of the Transient Behavior of a Reactor	589
Example 11.8.2.A	A Gas-Solid Reaction in a Fixed Bed Reactor	591
11.9	One-Dimensional Model Accounting for Interfacial and Intraparticle Gradients	597
11.9.1	Model Equations	597
Example 11.9.1.A	Simulation of a Primary Steam Reformer	604
Example 11.9.1.B	Simulation of an Industrial Reactor for 1-Butene Dehydrogenation into Butadiene	614
Example 11.9.1.C	Influence of Internal Diffusion	621

Chapter 12: Complex Flow Patterns

12.1	Introduction	639
12.2	Macro- and Micro-Mixing in Reactors	640
12.3	Models Explicitly Accounting for Mixing	643
12.4	Micro-Probability Density Function Methods	649
	12.4.1 Micro-PDF Transport Equations	649
	12.4.2 Micro-PDF Methods for Turbulent Flow and Reactions	653
12.5	Micro-PDF Moment Methods: Computational Fluid Dynamics	658
	12.5.1 Turbulent Momentum Transport. Modeling of the Reynolds-Stresses	662
	Annex 12.5.1.A Reynolds-Stress Transport Equations (web)	
	12.5.2 Turbulent Transport of Species and Heat. Modeling of the Scalar Flux	666
	Annex 12.5.2.A Scalar Flux Transport Equations (web)	
	12.5.3 Macro-Scale Averaged Reaction Rates	667
	Annex 12.5.3.A Moment Methods: Transport Equations for the Species Concentration Correlations	(web)
	12.5.3.1 Models Based upon the Concept of Eddy Dissipation	668
	12.5.3.2 The Eddy Break-Up Model	669
	Example 12.5.A Three Dimensional CFD Simulation of Furnace and Reactor Tubes for the Thermal Cracking of Hydrocarbons	670
12.6	Macro-PDF / Residence Time Distribution Methods	677
	12.6.1 Reactor Scale Balance and Species Continuity Equations	677
	Example 12.6.1.A Population Balance Model for Micro-Mixing in a Perfectly Macro-Mixed Reactor: PDF Moment Method	678
	12.6.2 Age Distribution Functions	685
	Example 12.6.2.A RTD of a Perfectly Mixed Vessel	688
	Example 12.6.2.B Experimental Determination of the RTD	689
	12.6.3 Flow Patterns Derived from the RTD	691

Example 12.6.3.A	RTD for Series of N Completely Stirred Tanks	693
12.6.4	Application of RTD to Reactors	694
Example 12.6.4.A	First Order Reaction(s) in Isothermal Completely Mixed Reactors, Plug Flow Reactors, and Series of Completely Stirred Tanks	696
Example 12.6.4.B	Second Order Bimolecular Reaction in Isothermal Completely Mixed Reactors and in a Succession of Isothermal Plug Flow and Completely Mixed Reactors: Completely Macro-Mixed versus Completely Macro- and Micro-Mixed	698
12.7	Semi-Empirical Models for Reactors with Complex Flow Patterns	699
12.7.1	Multi-Zone Models	699
12.7.2	Axial Dispersion and Tanks-in-Series Models	703

Chapter 13: Fluidized Bed and Transport Reactors

13.1	Introduction	719
13.2	Technological Aspects of Fluidized Bed and Riser Reactors	720
13.2.1	Fluidized Bed Catalytic Cracking	720
13.2.2	Riser Catalytic Cracking	723
13.3	Some Features of the Fluidization and Transport of Solids	723
13.4	Heat Transfer in Fluidized Beds	729
13.5	Modeling of Fluidized Bed Reactors	731
13.5.1	Two-Phase Model	731
13.5.2	Bubble Velocity, Size and Growth	735
13.5.3	A Hydrodynamic Interpretation of the Interchange Coefficient k_t	736
13.5.4	One-Phase Model	742
13.6	Modeling of a Transport or Riser Reactor	743
13.7	Fluidized Bed Reactor Models Considering Detailed Flow Patterns	744
13.8	Catalytic Cracking of Vacuum Gas Oil	749
13.8.1	Kinetic Models for the Catalytic Cracking of Vacuum	749

	Gas Oil	
13.8.2	Simulation of the Catalytic Cracking of Vacuum Gas Oil	753
13.8.2.1	Fluidized Bed Reactor. Two-Phase Model with Ten Lump Reaction Scheme	753
13.8.2.2	Fluidized Bed Reactor. Reynolds-Averaged Navier-Stokes Model with Ten Lump Reaction Scheme	756
13.8.2.3	Riser Reactor. Plug Flow Model with Slip with Reaction Scheme based upon Elementary Steps. Single Event Kinetics	758
13.8.3	Kinetic Models for the Regeneration of a Coked Cracking Catalyst	762
13.8.4	Simulation of the Regenerator of a Catalytic Cracking Unit	763
13.8.5	Coupled Simulation of a Fluidized Bed (or Riser) Catalytic Cracker and Regenerator	765

Chapter 14: Multiphase Flow Reactors

14.1	Types of Multiphase Flow Reactors	780
14.1.1	Packed Columns	780
14.1.2	Plate Columns	782
14.1.3	Empty Columns	782
14.1.4	Stirred Vessel Reactors	783
14.1.5	Miscellaneous Reactors	783
14.2	Design Models for Multiphase Flow Reactors	784
14.2.1	Gas and Liquid Phases Completely Mixed	784
14.2.2	Gas and Liquid Phase in Plug Flow	785
14.2.3	Gas Phase in Plug Flow. Liquid Phase Completely Mixed	786
14.2.4	An Effective Diffusion Model	786
14.2.5	A Two-Zone Model	788
14.2.6	Models Considering Detailed Flow Patterns	788
14.3	Specific Design Aspects	789
14.3.1	Packed Absorbers	789
	Example 14.3.1.A The Simulation or Design of a Packed Bed Absorption Tower	793
	Example 14.3.1.B The Absorption of CO ₂ into a Monoethanolamine (MEA) Solution	797

14.3.2	Two-Phase Fixed Bed Catalytic Reactors with Cocurrent Downflow. “Trickle” Bed Reactors and Packed Downflow Bubble Reactors	801
	Example 14.3.2.A Trickle Bed Hydrocracking of Vacuum Gas Oil	810
14.3.3	Two-Phase Fixed Bed Catalytic Reactors with Cocurrent Upflow. Upflow Packed Bubble Reactors	813
14.3.4	Plate Columns	815
	Example 14.3.4.A The Simulation or Design of a Plate Column for Absorption and Reaction	818
	Example 14.3.4.B The Absorption of CO ₂ in an Aqueous Solution of Mono- and Diethanolamine (MEA and DEA)	822
14.3.5	Spray Towers	827
14.3.6	Bubble Reactors	827
	Example 14.3.6.A Simulation of a Bubble Column Reactor Considering Detailed Flow Patterns and a First-Order Irreversible Reaction. Comparison with Conventional Design Models	830
14.3.7	Stirred Vessel Reactors	832
	Example 14.3.7.A Design of a Liquid-Phase <i>o</i> -Xylene Oxidation Reactor	837
