Preface.....	xi
Acknowledgments	xiii
The Author	xv
1. Introduction to Biotechnology Operations: Planning for Success.....	1
Biotechnology Operations	1
Marketing, Financial and Business Considerations for Development.....	4
Product Development Planning	7
Rationale for Product Development Planning.....	7
Targeted Product Profile	10
Product Development Plan.....	16
Clinical Development Planning.....	18
Project Management Planning	19
Regulatory Planning.....	20
Nonclinical Planning.....	22
Biomufacturing Planning	23
Quality Control Planning	24
Quality Systems and Quality Assurance Planning	26
Additional Elements of Product Planning	26
Summary of Planning for Success	28
2. Project Management	29
Project Management in Biotechnology.....	29
Background of Project Management.....	31
Project Management in Biotechnology.....	32
Project Management Environment.....	33
Project Objectives and Schedules	35
Sociotechnical Considerations	36
Participants in Project Management	37
Project Management in Biotechnology Operations	40
Establishing Project Management	40
Work Breakdown Structure.....	42
Forming a Project Team and Hands-On Project Management	42
Communication and Feedback	47
Team Dynamics.....	47
Project Risk Assessment and Management	50
Metrics and Tracking Progress	51

Resources: Planning and Usage.....	52
Human Factors in Project Management.....	53
Project Completion.....	55
Project Management with Contracts and Collaborations.....	56
Tools for Effective Project Management.....	57
Summary of Project Management in Biotechnology Development.....	60
3. Regulatory Affairs	61
The U.S. Food and Drug Administration: Law and Regulations for Biopharmaceuticals	61
Historical Basis for FDA Regulation	61
Regulatory Organization of FDA	63
Food and Drug Law, Regulation and Guidance.....	66
FDA-Regulated Products	67
Biologics.....	67
Drugs	70
Medical Devices	72
Combination Products.....	72
Other Classes of Biotechnology Products and Their Review at the FDA.....	73
Products for Veterinary Use	73
Cosmetics, Food, Dietary Supplements, Homeopathic or Nutritional Products.....	73
U.S. FDA Regulatory Information and Resources: Regulatory Intelligence.....	75
Regulatory Operations for FDA Applications.....	78
Regulatory Planning and the Regulatory Environment.....	78
Risk versus Benefit.....	78
Applications Seeking FDA Investigational Use or Marketing Approval.....	80
Investigational Use Applications: Investigational New Drug (IND) Application	81
Marketing Applications: Biologics License Application (BLA) and New Drug Application (NDA)	86
Medical Device Applications: 510(k) and Premarket Approval (PMA).....	89
Special Documents, Pathways or Exemptions.....	91
Generic Drugs and Biosimilar or Follow-On Biologics.....	93
Other Regulatory Activities	94
Public Meetings and Advisory Committees.....	94
Postmarketing Requirements and Activities.....	96
Advertising and Promotion.....	97
Summary on Regulatory Affairs Activities in Biotechnology Operations.....	98

Contents

4. Regulatory Compliance	99
Regulatory Compliance	99
Quality Systems to Meet Regulatory Compliance	99
Compliance and Quality Systems	99
cGMPs: Current Good Manufacturing Practices for Manufacture and Quality Control.....	100
cGLPs: Current Good Laboratory Practices for Nonclinical Lab Studies	100
cGCPs: Current Good Clinical Practices for Clinical Studies.....	102
Compliance for Biopharmaceuticals: Other Regulations of Importance.....	104
Compliance for Import of Biopharmaceuticals into the United States	104
Compliance for Medical Devices	105
Inspection and Enforcement	105
Inspections	106
Enforcement Actions	108
Product Liability.....	110
Compliance with Non-FDA Regulations: International, National, State and Local	110
International and Foreign National Regulatory Authorities for Medical Biotechnology Products.....	110
Transporting Infectious or Otherwise Hazardous Materials.....	114
Importing, Possessing or Transferring Controlled Biotechnology Materials	116
Public Health Security and Bioterrorism Preparedness and Response Act of 2002	118
Importation or Exportation of Biotechnology Products for the Purpose of Treatment of Diseases in Man	119
Occupational Health and Safety	120
Environmental Regulations in Biotechnology.....	121
Genetically Modified Organisms or Molecules.....	122
U.S. Regulatory Agencies Unified Biotechnology Web Site.....	124
International Diligence in Biotechnology Operations.....	124
Summary of Non-FDA Compliance	125
5. Quality Systems	127
Overview of Quality in Biotechnology.....	127
History: Evolution of Quality Concepts and Practices.....	128
Quality Systems Approach to Product Development	130
Planning a Quality System.....	132
Defining Objectives and Ensuring Management Support.....	132
The Quality Manual	133
The Quality Plan	134

Hallmarks of Quality: Fundamental Criteria for Building Effective Quality Systems	136
Management Responsibility.....	137
Defined Quality System.....	137
Quality by Design and Design Control.....	138
Quality by Design.....	138
Design Control.....	139
Design Change	143
Contractor, Vendor and Consultant Control.....	143
Product Identification and Traceability	146
Process Control.....	146
Environmental Controls.....	147
Inspection or Testing (Quality Control).....	147
Release of Material, Service or Product	148
Change Control and Corrective or Preventive Actions.....	149
Packaging and Labeling.....	150
Preservation, Storage and Handling.....	150
Servicing.....	151
Customer Concerns and Adverse Event Reports	151
Document Control	151
Training	151
Auditing	152
Quality Assurance Unit.....	152
Manage the Quality Assurance Function.....	153
Control Documents and Manage the Documentation System.....	154
Investigate Situations: Manage and Control Change	156
Ensure Qualified and Trained Staff	156
Perform Audits.....	157
Initiate a Quality System for a Biotechnology Operation.....	158
Unique and Effective Approaches to Quality Management	160
Risk-Based Approaches to Quality Systems	160
Total Quality Management (TQM).....	160
Six Sigma	161
Quality Systems for Research	161
Resolving Quality Issues or Problems.....	162
Summary of Quality Systems	163
6. Biomanufacture.....	165
Overview of Biomanufacturing Requirements.....	165
Design in Biomanufacture.....	165
Technical Considerations for Biomanufacture	169
Phases and Scale Up: The Biomanufacturing Life Cycle.	171
Raw Material Considerations.....	175

Contents

Compliance and Quality in Biomanufacture: Current Good Manufacturing Practices.....	176
Biomanufacturing Processes for Biotechnology Products.....	179
Expression of Recombinant Proteins and Nucleic Acids	179
Production of Recombinant Molecules from Expression Vectors.....	179
Genes, Vectors and Host Cells.....	180
Bacterial Cell Expression Systems	182
Yeast Cell Expression Systems	182
Mammalian or Insect Cell Expression Systems	183
Production of Master Cell Banks and Working Cell Banks.....	184
Biomanufacture of Recombinant Proteins	186
Planning Production of a Recombinant Protein.....	186
Upstream Process: Production by Bacterial or Yeast Cell Fermentation	187
Upstream Process: Production by Mammalian or Insect Cell Culture	190
Upstream Process: Recovery	191
Downstream Process: Purification	191
In-Process Testing and Analysis of Bulk Substance	199
Production of Bacterial Plasmid DNA	201
Production of Live Recombinant Organisms: Bacteria and Virus.....	201
Production of Products Composed of Mammalian Somatic Cells or Tissues.....	204
Production of Cellular Products Derived from Pluripotent (Stem) Cells.....	204
Production of Biological Molecules by Transgenic Animals or Transgenic Plants	206
Production of Biologically Active Lipids, Glycolipids and Complex Carbohydrates.....	210
Production of Biologically Active Peptides	212
Production of Combination Products: Biopharmaceutical with a Drug or Medical Device	212
Final Product: Formulation Fill, Finish and Labeling	214
Biomanufacturing Facilities, Utilities and Equipment.....	218
Facility Design Considerations	218
Facility and Utilities: A Controlled Environment.....	219
Operation of Clean Work Areas for Biomanufacture	221
Biomanufacturing Equipment	222
Contract Manufacturing Options.....	223
Validation of Biomanufacturing Facilities, Utilities, Equipment and Processes	223
Summary of Biomanufacture.....	226

7. Quality Control	227
Quality Control Overview.....	227
Define Product Attributes.....	230
Analytical Methods Measure Attributes.....	231
Traits of Analytical Methods.....	231
Draft a Certificate of Analysis (Bulk Substance).....	232
Select Analytical Methods.....	234
Develop Specifications.....	242
Enter Test Results.....	246
Certificate of Analysis for Drug Product.....	246
In-Process Testing.....	249
Analytical Methods.....	250
Additional Analytical Tools and Concepts.....	256
Quality Control of Cell Banks.....	258
Samples and Sampling.....	259
Analytical Controls and Reference Standards.....	260
Test Failures, Out-of-Specification Results and Retesting.....	261
Testing for Product Stability.....	262
Quality Control Testing of Raw Materials.....	266
Quality Control and the Manufacturing Environment.....	269
Qualification, Validation and Verification of Analytical Methods.....	269
Assay Validation.....	270
Application of Statistics in Assay Performance and Validation.....	274
Summary of Quality Control.....	275
8. Nonclinical Studies	277
Nonclinical Studies and Risk Assessment.....	277
Biopharmaceutical Delivery, Pharmacokinetics and Pharmacodynamics.....	279
Product Delivery to the Body.....	279
Absorption, Distribution, Elimination and Metabolism (ADME).....	280
Absorption.....	281
Distribution.....	282
Metabolism and Biotransformation.....	283
Excretion.....	283
Pharmacokinetics and Pharmacodynamics.....	283
Application of Pharmacokinetics and Pharmacodynamics in Biopharmaceutical Development.....	289
Safety Assessment of Biopharmaceuticals.....	291
Toxicology.....	291
Design of a Safety Assessment Program.....	292
<i>In Vitro</i> Screens: Surrogate Measures of Toxicity.....	295
<i>In Vivo</i> Safety Testing of Biopharmaceuticals.....	297
Animal Model Development.....	297

Contents

Test Product Formulations, Routes of Delivery and Dosing Designs	299
Protocols and Performance of Biopharmaceutical Safety Studies in Animals.....	301
Elements of a Nonclinical Study Design	302
Acute Toxicity Testing	305
Subchronic and Chronic Toxicity Testing	306
Reproductive, Developmental and Teratogenicity Toxicity Testing.....	308
Carcinogenicity Testing	310
Immunotoxicology	310
Genetic Toxicology	312
Tissue Binding or Local Tissue Tolerance	313
Quality of Nonclinical Studies: Current Good Laboratory Practices.....	314
Summary of Nonclinical Studies	314
9. Clinical Trials.....	317
Introduction to Clinical Trials.....	317
Background of Clinical Research	319
Introduction	319
Historical Information on Clinical Trials	320
Organization of Clinical Research	321
Phases of Clinical Trials	321
The Science of Clinical Research	322
Quality in Clinical Research and Current Good Clinical Practices.....	322
Clinical Development Planning.....	323
Infrastructure for a Clinical Trial: Individuals, Documents and Investigational Product.....	323
Design of Clinical Trials and the Clinical Protocol.....	324
Human Subjects, Patients and Volunteers.....	332
The Sponsor	332
The Principal Investigator and His/Her Study Staff	335
Institutional Review Boards (IRB): Process of Informed Consent (IC) and IC Form	336
Investigational Product	339
Collection of Clinical Data: Case Report Forms and the Patient Diary	339
Clinical Testing Laboratories.....	340
Reporting Results of Clinical Trials: Clinical Summary Reports.....	341
Clinical Trial Operations	341
Activities Leading to a Clinical Trial	342
Phase 1 Clinical Trial: First-Time-in-Man.....	344

Clinical Pharmacology Studies of Biopharmaceuticals in Man.....	345
Phase 2 Clinical Trial: Proof-of-Concept.....	348
Phase 3 Clinical Trial: Therapeutic Confirmatory	349
Phase 4 Clinical Study and REMS.....	351
Clinical Trials for New Populations or Indications	351
Global Clinical Trials.....	352
Quality Systems for Clinical Trials: Current Good Clinical Practices.....	353
Quality and cGCP in Clinical Trial Operations	353
Integrity of Clinical Study Data and Documents.....	355
Monitoring and Auditing Clinical Trials	356
Ethical Behavior and the Well-Being of Clinical Trial Subjects	356
Summary on Clinical Trials	358
Glossary	359
Additional Reading	383
Practical Problems and Questions.....	387
Index.....	395
