

APPLIED WELDING ENGINEERING

PROCESSES, CODES AND STANDARDS

RAMESH SINGH

Preface	xxi
Acknowledgment	xxiii

Section 1

Introduction to Basic Metallurgy

1.	Introduction	3
	Pure Metals and Alloys	4
	Smelting	4
	Iron	4
	Sponge Iron	4
2.	Alloys	7
	Alloys	7
	Effects of Alloying Elements	8
	Carbon Steels	8
	Sulfur	8
	Manganese	8
	Phosphorus	9
	Silicon	9
	Alloy Steels	9
	The Effect of Alloying Elements on Ferrite	9
	Effects of Alloying Elements on Carbide	10
3.	Physical Metallurgy	13
	Crystal Lattices	13
	Crystal Structure Nomenclature	14
	Solidification	14
	Lever Rule of Solidification	14
	Constitutional Supercooling	16
	Elementary Theory of Nucleation	17
	Allotropy	18
	Crystal Imperfections	21
	Grain Size	21

4.	Structure of Materials	23
	Phase Diagrams	24
	Different Types of Phase Diagrams	24
	Iron-Iron Carbide Phase Diagram	28
	Explanation of the Iron-Carbon Phase Diagram	28
	Rationale for Letter Designations in the Iron-Iron Carbide Phase Diagram	32
5.	Production of Steel	33
	The Electric Arc Furnace (EAF) Process	33
	Furnace Charging	34
	Melting	35
	Refining	36
	Phosphorus Removal	36
	Sulfur Removal	37
	Nitrogen and Hydrogen Control	37
	De-Slagging	38
	Tapping	38
	Basic Oxygen Furnace (BOF)	39
	Refining Reactions	40
	Carbon	40
	Silicon	40
	Manganese	41
	Phosphorus	42
	Sulfur Removal	43
	Deoxidation of Steel	44
	Rimmed Steel	45
	Capped Steel	46
	Semi-Killed Steel	46
	Killed Steel	46
	Deoxidation Equilibria	47
	The Iron-Iron Carbide Phase Diagram	50
6.	Classification of Steels	51
	Carbon Steels	53
	Low-Carbon	53
	Medium-Carbon	53
	High-Carbon	54
	Ultrahigh-Carbon	54
	High-Strength Low-Alloy (HSLA) Steels	54
	Classification of HSLA	54

Low-Alloy Steels	55
Low-Carbon Quenched and Tempered Steels	55
Medium-Carbon Ultrahigh-Strength Steels	55
Bearing Steels	55
Chromium-Molybdenum Heat-Resistant Steels	55
AISI Series	56
Some Example AISI Classifications	56
7. Cast Iron	57
Types of Cast Iron	57
White Cast Iron	59
Malleable Cast Iron	59
Ferritic Malleable Iron	60
White Heart Cast Iron	60
Black Heart Cast Iron	60
Pearlite Malleable Cast Iron	60
Martensitic Malleable Iron	60
Gray Cast Iron	61
Castability of Gray Cast Iron	62
Chilled Cast Iron	63
Nodular (Spheroidal Graphite) Cast Iron	63
Castability, Solidification and Shrinkage	63
Alloy Cast Irons	64
8. Stainless Steels	65
Stainless Steel Production	65
Forming	66
Heat Treatment	66
Cutting Stainless Steel	68
Finishing	68
Fabrication of Stainless Steel	69
Welding and Joining	69
Types of Stainless Steels	69
Classification of Stainless Steel	70
Martensitic Stainless Steels	70
Ferritic Stainless Steels	70
Pitting Resistance Equivalent (PRE)	71
Austenitic Stainless Steels	71
Duplex Stainless Steels	72
Precipitation-Hardening (PH) Stainless Steels	73

9. Non-Ferrous Materials	75
Copper and Copper Alloys	75
Aluminum and Aluminum Alloys	76
Physical Metallurgy of Aluminum	76
Effect of Alloying Elements on Aluminum	76
Effect of Iron	77
Effect of Silicon	77
Effect of Manganese	77
Effect of Magnesium	77
Effect of Copper	78
Effect of Zinc	78
Effect of Chromium	78
Effect of Zirconium	78
Effect of Lithium	79
Age Hardenable Alloys	79
Nickel and Nickel Alloys	80
Titanium and Titanium Alloys	81
10. Working With Metals	83
Elastic Limit	83
Plastic Deformation	84
Fracture	84
Polycrystalline Materials	84
Cold Working	84
Stored Energy	85
Restoring the Lattice Structure of Metal after Cold Work – Annealing	85
Grain Growth	85
Hot Working	86
11. Mechanical Properties and Testing of Metals	87
Strength of Materials	87
Elastic and Plastic Behavior	88
Ductile vs. Brittle Behavior	88
Failure	89
Fracture	89
Fracture Control	90
Crack Growth and Fracture	91
Damage Tolerance	91
Failure Analysis	91
Testing of Metals	93
Tensile Test	93

Hardness Test	93
Impact Test	94
Creep Test	94
Fatigue Test	94
12. Heat Treatment of Steels	95
TTT and CCT Curves	96
Isothermal-Transformation (IT) or (TTT) Diagrams	96
Cooling Curves	98
Cooling-Transformation (C-T) Diagrams	98
Stress Relief Annealing	98
Normalizing	100
Annealing	100
Spheroidizing	101
Tempering	102
Austempering of Steels	102
Martempering	102
Hardening	103
Hardening by Martensite Transformation	103
Case Hardening and Carburizing	103
Process of Quenching	105
Heat Treatment of Non-Ferrous Material	105
Heat Treatment of Copper and Copper Alloys	105
Heat Treating Aluminum and its Alloys	106
Heat-Treating Furnaces	106
Liquid Heating Baths	107
 Section 2	
Welding Metallurgy and Welding Processes	
1. Introduction	111
Welding Procedures	112
2. Physics of Welding	115
Heat	116
Details of the Heat-Flow in Welding	117
Heat in Arc Welding Processes	120
Heat in Plasma Arc Cutting and Welding	121
Heat in Resistance Welding	121
Heat in Electroslag Welding (ESW)	122
Heat in Welding Processes using Chemical Sources	124
Thermit Welding	125

Heat Generated by Mechanical Processes	126
Friction Welding	126
Ultrasonic Welding	127
Explosion Welding	128
Heat by Focused Sources	128
Laser Beam Welding (LBW)	129
Electron Beam Welding (EBW)	130
Other Sources of Heat in Welding	131
Application of the Principles of Welding Physics	133
Pre-Heating	133
Determining the Need for Pre-Heat and the Temperature	134
Post-Weld Heat Treatment (PWHT)	138
Heat and Time in Welding	139
Heat Input	140
Energy Distribution	140
Rate of Heating	140
Maximum Temperature	141
Heat Generation and Temperature Distribution – Practical Application	141
Time at Temperature	141
Cooling Rates	142
Base Metal Mass	142
 3. Welding and Joining Processes	 147
Shielded Metal Arc Welding (SMAW): Process Fundamentals	151
How the Process Works	152
Covered Electrodes Used in the SMAW Process	152
Joint Design and Preparation	154
Gas Tungsten Arc Welding (GTAW): Process Description	155
Process Advantages and Limitations	155
Electrodes	155
Joint Design	156
Gas Metal Arc Welding (GMAW)	157
Process Description	157
Electrode Selection	158
Joint Design	158
Flux Cored Arc Welding (FCAW)	158
Process Fundamentals	158
Principal Applications of FCAW	159
Shielding Gases	160
Electrodes	160
Submerged Arc Welding (SAW)	160
Process Description	160

Materials	161
Other Common Joining and Welding Processes	161
Electroslag Welding (ESW)	161
Plasma Arc Welding (PAW)	162
Stud Welding	163
Oxy-fuel Gas Welding (OFW)	164
Brazing and Soldering	165
Arc-Welding Power Sources	166
Constant Voltage Power Source	167
Constant-Current Power Source	167
Transformers	168
Thyristor-Silicon Controlled Rectifiers (SCR)	169
Generators	170
Alternators	170
 4. Physical Effect of Heat on Material During Welding	 171
The Molten Metal	172
The Welded Plate	172
Influence of Cooling Rate	173
 5. Stresses, Shrinkage and Distortion in Weldments	 175
Stresses in Weldments	176
Definitions of Terms	176
Development of Stresses	176
Moving Localized Heat Source	176
Distribution of Stress in a Simple Weld	177
Residual Stresses	178
Shrinkages	178
Shrinkage Transverse to a Butt Weld	178
Shrinkage Longitudinal to a Butt Weld	179
Distortion in Weldments	180
General Description	180
Angular Distortion	181
Longitudinal Bowing	181
Buckling	181
Corrective Measures	182
Thermal Straightening	182
Designing Weld Joints	183
Assessing the Strength of Welds	183
Throat of a Weld	184
Sizing a Fillet Weld	185
Stress Causing Fatigue in Weld	185

Weld Size and Cost Control	188
Control of Welding Stresses to Minimize Through-Thickness Failures	189
6. Welding Corrosion Resistant Alloys – Stainless Steel	191
Corrosion Resistant Alloys (CRAs)	192
Stainless Steel	192
Welding Stainless Steel	192
General Welding Characteristics	192
Welding Processes	194
Protection against Oxidation	194
Welding Hygiene	194
Austenitic Stainless Steels	195
Metallurgical Concerns Associated with Welding Austenitic Stainless Steels	195
Mechanical Properties of Stainless Steels	196
Welding of Austenitic Stainless Steels	196
Superaustenitic Stainless Steels	198
Material Properties and Applications	198
Welding and Joining of Superaustenitic Stainless Steels	198
Difficulties Associated with Welding Stainless Steel	199
Martensitic Stainless Steels	202
Properties and Application	202
Welding Martensitic Stainless Steels	203
Ferritic Stainless Steels	205
Properties and Application	205
Welding Ferritic Steel	206
Precipitation Hardened Stainless Steels	206
Properties and Application of Precipitation Hardened Steels	206
Welding Precipitation Hardened (PH) Steels	207
Duplex Stainless Steels	210
Mechanical Properties	210
Heat Treatment	212
Welding and Fabrication	212
7. Welding Non-Ferrous Metals and Alloys	215
Aluminum and its Alloys	216
The Confusing Thing about Aluminum	216
Weld Hygiene	217
Pre-Heating	217
The Conductivity of Heat	217
Welding Filler Metals	218
Welding Aluminum with the Shield Metal Arc Welding (SMAW) Process	218

Welding Aluminum with the Gas Tungsten Arc Welding (GTAW)	
Process	220
Type of Current and Electrode	220
Grinding the Tip of the Electrodes	221
Welding Aluminum with the Gas Metal Arc Welding (GMAW)	
Process	221
Power Source	221
Wire Feeder	221
Welding Guns	222
Welding Technique	222
The Push Technique	222
Travel Speed	222
Shielding Gas	223
Welding Wire	223
Friction Stir Welding (FSW)	223
Nickel Alloys	224
Heat Treatment	224
Mechanical Properties	224
Fabrication	225
Precipitation-Hardenable Nickel-Based Alloys	225
Heat Treatment of PH Nickel Alloys	225
Mechanical Properties	225
Welding	226
Titanium Alloys	226
Heat Treatment	227
Alpha (α) Titanium	227
Alpha/beta (α - β) Titanium	227
Beta (β) Titanium	227
8. Weld Defects and Inspection	229
Weld Quality	229
Acceptance Standards	229
Discontinuities in Fusion Welded Joints	230
Classification of Weld Joint Discontinuities	231
Typical Weld Defects	232
Porosity	233
Inclusions	234
Incomplete Fusion	234
Inadequate Joint Penetration	234
Undercut	234
Underfill	235
Overlap	235
Cracks	235
Surface Irregularities	236

Base Metal Discontinuities	236
Designing Weld Joints	236
Basis of Welded Design	237
Stresses in Pressure Vessels	241
Pipelines	242

Section 3

Non-Destructive Testing

1. Introduction	247
2. Visual Inspection (VT)	249
Advantages of Visual Inspection	250
3. Radiography	253
Source of Radiation	254
X-Rays	255
Effect of Kv and MA	257
Scatter Radiation	258
X-Ray Equipment	259
Power Sources	259
Control Panel	260
Gamma Rays	261
Artificial Sources	262
Half-Life	262
Film	263
Radiographic Exposure Techniques	265
Single Wall Single Image (SWSI)	266
Panoramic Technique	266
Double Wall Single Image (DWSI)	266
Double Wall Double Image (DWDI)	266
Radiographic Image Quality	268
Radiographic Contrast	268
Subject Contrast	269
Film Contrast	269
Radiographic Definition	270
Exposure Geometry	270
Film Graininess	271
Image Quality Indicator (IQI) or Penetrameter	272
Radiation Safety	272
4. Magnetic Particle Testing	275
Principles of Magnetic Particle Testing	276
Calculating Magnetizing Current	277

Types of Magnetizing Current	278
Inspection Method	279
Pre-Cleaning of Test Surface	279
Drying after Preparation	279
Application of the Current	279
Alternating Current	279
Direct Current	280
Continuous or Residual Application of Current	280
Dry Method of Inspection	281
Wet Method of Inspection	281
Viewing Conditions	282
Inspection under Ultraviolet (Black) Light	282
5. Penetrant Testing	283
General Procedure	284
Penetrant Materials	284
Specific Requirements	284
Control of Contaminants	284
Surface Preparation	285
Drying after Preparation	286
Techniques	286
Techniques for Standard Temperatures	286
Penetrant Application	286
Penetration Time (Dwell Time)	287
Excess Penetrant Removal	287
Removing Excess Water-Washable Penetrant	287
Removing Excess Post-Emulsifying Penetrant	287
Removing Excess Solvent-Removable Penetrant	287
Drying Process after Excess Penetrant Removal	287
Developing	288
Interpretation	288
Final Interpretation	288
Characterizing Indication(s)	288
Color Contrast Penetrant	289
Fluorescent Penetrant	289
Evaluation	290
Liquid Penetrant Comparator	290
6. Ultrasonic Testing	293
Theory of Sound Wave and Propagation	294
Theory of Sound	295
Piezoelectricity	296
Sound Beam Reflection	296
Sound Beam Frequencies	296

Sound Beam Velocities	297
Snell's Law of Reflection and Refraction	298
Understanding the Variables Associated with Ultrasonic Testing	299
Selection of Test Equipment	300
A-Scan Equipment	301
B-Scan Equipment	301
C-Scan Equipment	301
Testing Procedure	302
Role of Coupling in Testing	303
7. Eddy Current Testing	305
Method	305
8. Acoustic Emission Testing (AET)	307
Ongoing Developments in the AET Field	307
Future of AET	308
9. Ferrite Testing	321
Effect of Ferrite in Austenitic Welds	321
10. Pressure Testing	323
Purpose	323
Method	323
Test Medium	324
Sensitivity of the Test	324
Proof Testing	324
Practical Application of Hydrostatic Testing	325
Critical Flaw Size	327

Section 4

Codes and Standards

1. Introduction	331
2. Codes, Specifications and Standards	333
American Society of Mechanical Engineers (ASME)	334
Background and History	334
Present Day ASME	336

List of all Twelve ASME Boiler and Pressure Vessels Codes	336
ASME Section VIII, Division 1 (Pressure Vessels)	337
ASME Code for Pressure Piping	337
ASME Section V	340
The National Board	340
The National Board Inspection Code (NBIC)	342
American Petroleum Institute	342
API 653 (Above-Ground Storage Tanks)	343
API 510 (Pressure Vessels)	343
API 570 (Pressure Piping)	343
API RP 579 (Fitness for Service)	343
API RP 580 (Risk Based Inspection)	343
American Society for Testing Materials (ASTM)	343
 Index	 347
