Portland Cement

Third edition

Gerry Bye

Edited by Paul Livesey

Technical editor Leslie Struble

Contents

	Preface	ix
	Units	xi
01	Introduction and composition of Portland cement	1
	<i>P. Livesey</i>	
	1.1. Introduction	1
	1.2. Composition of Portland cement	4
	1.3. Polymorphism and solid solution in clinker compounds	8
	1.4. Minor clinker compounds	12
	Selected references	12
	Further reading	12
02	Raw materials	13
	<i>P. Livesey and P. del Strother</i>	
	2.1. Raw materials	13
	2.2. Proportioning of raw materials	17
	2.3. Reactivity of the raw materials	21
	2.4. Physical properties of raw materials	25
	Selected references	25
	Further reading	26
03	Production of cement clinker	27
	<i>P. del Strother</i>	
	3.1. Introduction	27
	3.2. Preparation of kiln feed	28
	3.3. Pyroprocessing: principal manufacturing processes	30
	3.4. Pyroprocessing: physical and chemical processes involved	37
	3.5. Thermal efficiency of pyroprocessing	44
	Selected references	47
	Further reading	47
04	Characterisation of Portland cement clinker	49
	<i>P. Livesey</i>	
	4.1. Introduction	49
	4.2. Chemical analysis by selective dissolution	49
	4.3. Optical microscopy	50
	4.4. X-ray diffraction	54
	4.5. Electron microscopy	57
	4.6. Concluding remarks	59
	Selected references	59
	Further reading	60
05	Grinding and fineness of cement	61
	<i>P. Livesey and P. del Strother</i>	
	5.1. Cement milling	61
	5.2. Fineness of cement	66
	Selected references	72
	Further reading	72

06	Tests of cement quality	73
	<i>P. Livesey</i>	
	6.1. Introduction	73
	6.2. Chemical composition	75
	6.3. Setting times	75
	6.4. Compressive strength	75
	6.5. Workability	78
	6.6. Soundness	80
	6.7. Heat of hydration	82
	6.8. Concluding remarks – durability of concrete	84
	Selected references	85
	Further reading	87
07	The hydration of Portland cement	89
	<i>L. Struble</i>	
	7.1. Introduction	89
	7.2. Hydration of the individual phases in Portland cement	95
	7.3. Hydration of Portland cement	112
	7.4. Hydration at elevated temperatures	116
	7.5. Concluding remarks	118
	Selected references	120
	Further reading	121
08	The nature of hardened cement paste	123
	<i>L. Struble</i>	
	8.1. Microstructure of hardened cement paste	123
	8.2. Surface area and porosity of hardened cement paste	128
	8.3. Physical properties of hardened cement paste	135
	8.4. Nature of the solid–solid bond in hardened cement paste	148
	8.5. Modelling microstructure-physical property development in hydrating paste	150
	8.6. Concluding remarks	151
	Selected references	151
	Further reading	152
09	Portland cements and related blended cements	153
	<i>L. Struble</i>	
	9.1. Introduction	153
	9.2. Type I and related Portland cements	153
	9.3. Cements with mineral constituents	161
	9.4. Pozzolanic materials	162
	9.5. Blastfurnace slag and blastfurnace slag cements	173
	9.6. Problems in specification of blended cements	177
	Selected references	181
	Further reading	183
10	Admixtures and special cements	185
	<i>L. Struble</i>	
	10.1. Admixtures	185

	10.2. Oilwell cements	188
	10.3. Calcium aluminate cement	188
	10.4. Alkali-activated slag and aluminosilicate cements	190
	10.5. Calcium sulfoaluminate cements	191
	Selected references	194
	Further reading	195
11	Environmental impact of cement manufacture	197
	<i>I. Walpole</i>	
	11.1. Introduction	197
	11.2. Emissions to air	198
	11.3. Water	203
	11.4. Environmental aspects of alternative fuels	204
	11.5. <i>Environmental monitoring</i>	205
	11.6. Greenhouse gas emissions and carbon footprinting	205
	Selected references	206
	Further reading	206
Appendix	Pore size distribution from an adsorption isotherm	207
	Selected references	208
	Index	209
