Product and Process Modelling

A Case Study Approach

Contents

List of additional contributing authors	ix
Preface	xi

Part-I

1 Modelling: Nature and Use	1
1.1 Modelling Fundamentals	1
1.2 Model Use and Decision Making	6
1.3 Multiscale, Multiform Nature of Product-Process Modelling	10
1.4 Summary	15
1.5 Glossary	15
References	16
2 Modelling Practice	19
2.1 Modelling Methodologies	19
2.2 Summary	31
References	31
3 Computer-Aided Modelling Methods and Tools	33
3.1 Mathematical Models	35
3.2 Methods-tools for Model Representation	38
3.3 Model Generation	42
3.4 Modelling Toolbox	48
3.5 Summary	58
References	58

Part-II

4 Overview of the Case Studies	77
5 Constitutive Models	87
5.1 Constitutive Models – Physical Properties	88
5.2 Property Model Parameter Estimation	94
5.3 Constitutive Model Applications	102
References	124

6 Steady-State Process Modelling	125
6.1 Process Descriptions	125
6.2 Model Description	130
References	156
7 Models for Dynamic Applications	157
7.1 Complex Unit Operations: Blending Tank	157
7.2 Complex Integrated Operations: Direct Methanol Fuel Cell	175
7.3 Multiscale Fluidised Bed Reactor	190
7.4 Dynamic Chemical Reactor	199
7.5 Polymerisation Reactor	206
References	212
8 Distributed Parameter Modelling Applications	213
8.1 Oil Shale Pre-heat and Cooling Unit	213
8.2 Modelling the Dynamic Performance of a Complex Granulation System for Map-dap Production	239
8.3 Short-path Evaporator Model	259
8.4 Acknowledgements	271
References	271
9 Tennessee Eastman Plant-wide Industrial Process Challenge Problem	273
9.1 Process Description	273
9.2 Simplified Model	273
9.3 Full (Process) Model	290
References	303
10 Modelling of Batch Process Operations	305
10.1 Modelling of a Batch Crystallisation Process	305
10.2 Modelling Batch Distillation Operations	317
References	336
11 Parameter Estimation	337
11.1 Modelling of Simple Reaction Kinetics	337
11.2 Kinetic Modelling – Parameter Estimation (1)	339
11.3 Kinetic Modelling – Parameter Estimation (2)	340
11.4 Kinetic Modelling – Parameter Estimation (3)	342
11.5 Kinetic Modelling – Parameter Estimation with Maximum Likelihood Principle	348
11.6 Parameter Regression – Dynamic Optimisation	356
References	362

12 Modelling for Bio-, Agro- and Pharma-Applications	363
12.1 Microcapsule-controlled Release of Active Ingredients	363
12.2 Fermentation Process Modelling	380
12.3 Milk Pasteurisation Process Modelling	396
12.4 Milling Process Model	407
12.5 Granulation Process Model	413
12.6 Pharmaceutical Tablet Pressing Process Model	422
References	430
Part-III	
13 Computer Aided Modelling – Opportunities and Challenges	433
References	437
Appendix-1	439
Appendix-2	541
Index	547
Acronyms	557
