

**Automation and Control
Engineering Series**

Intelligent Diagnosis and Prognosis of Industrial Networked Systems

**Chee Khiang Pang, Frank L. Lewis,
Tong Heng Lee, Zhao Yang Dong**

Contents

Preface.....	xi
Nomenclature.....	xv
List of Figures.....	xvii
List of Tables.....	xxi
Chapter 1 Introduction	1
1.1 Diagnosis and Prognosis.....	2
1.1.1 Parametric Based	2
1.1.2 Non-Parametric Based	3
1.2 Applications in Industrial Networked Systems	5
1.2.1 Modal Parametric Identification (MPI)	5
1.2.2 Dominant Feature Identification (DFI).....	6
1.2.3 Probabilistic Small Signal Stability Assessment	6
1.2.4 Discrete Event Command and Control	7
Chapter 2 Vectors, Matrices, and Linear Systems	9
2.1 Fundamental Concepts	9
2.1.1 Vectors	9
2.1.2 Matrices	11
2.2 Linear Systems	14
2.2.1 Introduction to Linear Systems.....	14
2.2.2 State-Space Representation of LTI Systems.....	15
2.2.3 Linearization of Non-Linear Systems.....	18
2.3 Eigenvalue Decomposition and Sensitivity	19
2.3.1 Eigenvalue and Eigenvector.....	19
2.3.2 Eigenvalue Decomposition	21
2.3.3 Generalized Eigenvectors	23
2.3.4 Eigenvalue Sensitivity to Non-Deterministic System Parameters.....	27
2.3.5 Eigenvalue Sensitivity to Link Parameters	28
2.4 Singular Value Decomposition (SVD) and Applications	32
2.4.1 Singular Value Decomposition (SVD)	32
2.4.2 Norms, Rank, and Condition Number	34
2.4.3 Pseudo-Inverse.....	34
2.4.4 Least Squares Solution	34

2.4.5 Minimum-Norm Solution Using SVD	36
2.5 Boolean Matrices	37
2.5.1 Binary Relation	38
2.5.2 Graphs	40
2.5.3 Discrete-Event Systems	40
2.6 Conclusion	44
Chapter 3 Modal Parametric Identification (MPI)	47
3.1 Introduction	47
3.2 Servo-Mechanical-Prototype Production Cycle	50
3.2.1 Modal Summation	53
3.2.2 Pole-Zero Product	54
3.2.3 Lumped Polynomial	55
3.3 Systems Design Approach	55
3.4 Modal Parametric Identification (MPI) Algorithm	62
3.4.1 Natural Frequencies f_i and Damping Ratios ζ_i	64
3.4.2 Reformulation Using Forsythe's Orthogonal Polynomials	68
3.4.3 Residues R_i	73
3.4.4 Error Analysis	75
3.5 Industrial Application: Hard Disk Drive Servo Systems	76
3.6 Results and Discussions	82
3.7 Conclusion	84
Chapter 4 Dominant Feature Identification (DFI)	85
4.1 Introduction	85
4.2 Principal Component Analysis (PCA)	90
4.2.1 Approximation of Linear Transformation X	90
4.2.2 Approximation in Range Space by Principal Components	91
4.3 Dominant Feature Identification (DFI)	92
4.3.1 Data Compression	92
4.3.2 Selection of Dominant Features	93
4.3.3 Error Analysis	95
4.3.4 Simplified Computations	97
4.4 Time Series Forecasting Using Force Signals and Static Models	97
4.4.1 Determining the Dominant Features	99
4.4.2 Prediction of Tool Wear	99
4.4.3 Experimental Setup	100
4.4.4 Effects of Different Numbers of Retained Singular Values q and Dominant Features p	105
4.4.5 Comparison of Proposed Dominant Feature Identification (DFI) and Principal Feature Analysis (PFA)	108
4.5 Time Series Forecasting Using Acoustic Emission Signals and Dynamic Models	113
4.5.1 ARMAX Model Based on DFI	114

4.5.2	Experimental Setup.....	116
4.5.3	Comparison of Standard Non-Dynamic Prediction Models with Dynamic ARMAX Model	121
4.5.4	Comparison of Proposed ARMAX Model Using ELS with DFI, MRM Using RLS with DFI, and MRM Using RLS with Principal Feature Analysis (PFA)	123
4.5.5	Effects of Different Numbers of Retained Singular Values and Features Selected	125
4.5.6	Comparison of Tool Wear Prediction Using AE Measure- ments and Force Measurements.....	130
4.6	DFI for Industrial Fault Detection and Isolation (FDI)	131
4.6.1	Augmented Dominant Feature Identification (ADFI)	132
4.6.2	Decentralized Dominant Feature Identification (DDFI).....	132
4.6.3	Fault Classification with Neural Networks.....	132
4.6.4	Experimental Setup.....	134
4.6.5	Fault Detection Using 120 Features	142
4.6.6	Augmented Dominant Feature Identification (ADFI) and NN for Fault Detection	143
4.6.7	Decentralized Dominant Feature Identification (DDFI) and NN for Fault Detection	145
4.7	Conclusion	149
Chapter 5	Probabilistic Small Signal Stability Assessment.....	151
5.1	Introduction	152
5.2	Power System Modeling: Differential Equations	155
5.2.1	Synchronous Machines.....	156
5.2.2	Exciter and Automatic Voltage Regulator (AVR).....	163
5.2.3	Speed Governor and Steam Turbine	165
5.2.4	Interaction between a Synchronous Machine and Its Con- trol Systems	167
5.3	Power System Modeling: Algebraic Equations	168
5.3.1	Stator Equations.....	168
5.3.2	Network Admittance Matrix $\mathbf{Y}_N$	171
5.3.3	Reduced Admittance Matrix $\mathbf{Y}_R$	172
5.4	State Matrix and Critical Modes.....	173
5.5	Eigenvalue Sensitivity Matrix.....	178
5.5.1	Sensitivity Analysis of the New England Power System	183
5.5.2	Statistical Functions.....	187
5.5.3	Single Variate Normal PDF of α_i	193
5.5.4	Multivariate Normal PDF	194
5.5.5	Probability Calculations	195
5.5.6	Small Signal Stability Region.....	198
5.6	Impact of Induction Motor Load	201
5.6.1	Composite Load Model for Sensitivity Analysis.....	203

5.6.2 Motor Load Parameter Sensitivity Analysis.....	205
5.6.3 Parametric Changes and Critical Modes Mobility.....	214
5.6.4 Effect of the Number of IMs on Overall Sensitivity (with 30% IM load)	215
5.6.5 Effect on Overall Sensitivity with Different Percentages of IM Load in the Composite Load.....	220
5.7 Discussion.....	221
5.8 Conclusion	222
Chapter 6 Discrete Event Command and Control.....	225
6.1 Introduction	225
6.2 Discrete Event C2 Structure for Distributed Teams	227
6.2.1 Task Sequencing Matrix (TSM)	229
6.2.2 Resource Assignment Matrix (RAM).....	233
6.2.3 Programming Multiple Missions	235
6.3 Conjunctive Rule-Based Discrete Event Controller (DEC).....	237
6.3.1 DEC State Equation.....	237
6.3.2 DEC Output Equations	239
6.3.3 DEC as a Feedback Controller	239
6.3.4 Functionality of the DEC.....	239
6.3.5 Properness and Fairness of the DEC Rule Base	241
6.4 Disjunctive Rule-Based Discrete Event Controller (DEC)	244
6.5 DEC Simulation and Implementation.....	245
6.5.1 Simulation of Networked Team Example.....	246
6.5.2 Implementation of Networked Team Example on Actual WSN	247
6.5.3 Simulation of Multiple Military Missions Using FCS	247
6.6 Conclusion	252
Chapter 7 Future Challenges.....	255
7.1 Energy-Efficient Manufacturing	255
7.2 Life Cycle Assessment (LCA).....	257
7.3 System of Systems (SoS).....	260
References.....	263
Index	279
