Contents

Acknowledgments	xv
Introduction	xvii
Chapter 1 Cumulative impact assessment: A synopsis of guidance and best professional practices	1
Definition of cumulative impact	2
Other cumulative impact definitions	3
Types of cumulative impacts	4
Additive cumulative impacts	4
Synergistic cumulative impacts	6
The scale problem: defining spatial and temporal boundaries	8
Importance of proper scoping	9
Time domain	12
Spatial domain	13
Establishing threshold levels	14
Determining the scoping of actions to evaluate	15
Identifying present and future activities to include in the CIA	16
Considering related actions	17
Considering connected actions	17
Induced growth	18
Disregarding future actions	18
Identifying impacts of past actions	19
Early court direction for assessing impacts of past actions	19
CEQ's guidance on assessing impacts of past actions	20
Court direction validating CEQ's interpretation of past actions	21
Defining a defensible baseline for assessing impacts of past actions	21
A five-step procedure for accessing cumulative impacts	23
No-action baseline	23
Five-step procedure	24
Managing and performing a cumulative impact analysis	27
Components of an adequate cumulative impact analysis	27
Data	28

Assessing cumulative effects.....	28
Evaluating cause-and-effect relationships.....	29
Dealing with uncertainty.....	31
Resolving Eccleston's cumulative impact paradox.....	33
The cumulative impact paradox.....	34
Importance of resolving this paradox.....	36
Interpreting significance.....	37
Significant departure principle.....	37
Would the action significantly change the cumulative impact baseline?.....	38
Criticisms of the SDP method.....	40
Applicability.....	40
Examples of the paradox.....	41
Factors used in assessing significance.....	46
Preparing NEPA programmatic analyses and tiering.....	47
Regulatory guidance for preparing programmatic analyses.....	47
Programmatic analyses.....	49
Programmatic NEPA approaches.....	49
Policies, programs, plans, and area-wide analyses.....	51
Differences between programmatic and tiered analyses.....	52
Programmatic analysis guidance.....	52
Addressing decisions and issues in tiered analyses.....	54
New information.....	54
Litigation and judicial review.....	58
Examples of court direction.....	58
Court direction on performing cumulative impact assessments.....	59
Differences in cumulative impact analyses between EAs and EISs.....	60
Endnotes.....	62

Chapter 2 Preparing greenhouse emission assessments:

A synopsis of guidance and best professional practices....	65
Brief summary of the science behind greenhouse warming.....	66
Current status of the debate.....	67
Intergovernmental panel on climate change.....	67
Additional sources on climate change.....	68
Skepticism and scientific scandal.....	70
Summary of key NEPA court decisions involving climate change.....	72
An early important case.....	72
Ninth Circuit guidance.....	73
Litigation strategies used by plaintiffs.....	73
Lessons learned from climate change litigation.....	74
Cases holding EA to be inadequate.....	75

Cases in which an EA suit is currently pending.....	76
Case holding an EIS to be invalid	77
Cases holding EISs to be valid	78
EIS suit currently pending	78
Non-NEPA suits supporting consideration of global climate change	79
Regulatory direction on considering greenhouse emissions	80
Focus of current guidance	80
Executive Order 13423	80
Federal leadership in environmental, energy, and economic performance	81
Congress requires EPA to create GHG emissions reporting regulation	82
NEPA and GHG impact considerations	82
State of current NEPA practice	83
Increased regulatory and EPA oversight	83
The NEPA's public element	84
Draft CEQ guidance on considering climate change and greenhouse gas	84
When to evaluate GHG emissions	85
What should be considered in the GHG evaluation.....	87
Criteria useful in determining the need to evaluate	89
GHG impacts in NEPA documents	89
Uncertainty.....	89
The causal chain and reasonably close relationship.....	90
"Remote and highly speculative" impacts	91
Determining when to perform a GHG assessment.....	91
Best professional practices for performing GHG assessments.....	91
Performing the GHG impact assessment.....	93
<i>De Minimis</i> actions	93
GHG emissions versus environmental impacts.....	93
Standard of care expected in evaluating climate change	94
Sliding-scale approach	95
Analytical considerations	95
Mitigation measures and analysis of a carbon-neutral program ...	97
Addressing indirect effects of GHG emissions	98
The rule of reason and reasonably foreseeable standards	98
Causation and remoteness	99
Method for evaluating climate change impacts	100
Minimum five-step procedure for assessing GHG impacts	100
A fifteen-step method for preparing a comprehensive GHG assessment.....	101
Examples of describing GHG impacts in NEPA documents	101
How GHG emissions were addressed in two EISs.....	101

Dealing with uncertainties, including incomplete or unavailable information	104
The questions, issues, and complexities faced in preparing a GHG assessment.....	105
Considering cumulative GHG impacts.....	106
Private projects as major federal actions under NEPA	108
Spatial and geographic considerations.....	108
Assessing cumulative significance	108
The cumulative impact paradox	109
The paradox and the greenhouse assessment problem.....	110
Assessing cumulative significance can lead to a paradox.....	111
A growing consensus on the paradox	114
Toward a solution.....	116
Complementary interpretation of significance	116
Significant departure principle	117
Does the GHG emission significantly affect the baseline?	117
Example using non-greenhouse emission	119
Assessing emission levels versus impacts	122
Comparative summary of the SDP process.....	123
The sphinx scale: assessing the significance of greenhouse gas emissions	124
The sphinx solution.....	125
The sphinx scale.....	127
Application of the sphinx scale	127
Adoption of the sphinx scale	127
Rationale.....	129
Rule of reason.....	129
Agencies have been granted authority to interpret and determine significance.....	130
Agencies granted authority to develop methods for implementing NEPA	130
Summary.....	131
Endnotes.....	132
Chapter 3 Preparing risk assessments and accident analyses.....	137
Definitions of risk.....	138
Risk assessment.....	139
The process for assessing risk	140
Flawed or misleading risk-based assessments.....	141
Vulnerability assessment	141
A combined NEPA and risk assessment process	142
Dealing with missing or incomplete information in an EIS	143
Ecological risk.....	144

Guidance memorandum by Presidential Commission on Risk	144
Uncertainty versus risk.....	146
Risk in decision making.....	147
Factors affecting perception of risk and risk-based decision making	147
Risk aversion and irrational decision making	147
Judgment by heuristic.....	148
Cognitive dissonance	149
Risk homeostasis hypothesis	149
No action.....	150
Optimism bias and planning fallacy	150
Rational and irrational judgments concerning risk	151
Judging risk based on dramatic, catastrophic, and involuntary actions.....	151
Judgments of risk based on occupational, gender, and demographics differences	152
Judgments of risk based on social considerations	152
Risk communications.....	153
Framing.....	153
Anchoring and compression	154
Reducing risk communication barriers	155
Addressing public concerns	155
Developing a risk communications strategy.....	157
Communicating risk.....	157
Simplify language, not content.....	159
Dealing with uncertainty	159
Recognize that safety is relative	159
Exercise caution when using risk comparisons	159
Develop a key message	160
Accident analyses.....	160
Overview	160
Accident scenarios and probabilities.....	161
Applying the rule of reason	162
Range of accident scenarios	162
Scenario probabilities.....	163
Risk	164
Conservatism.....	164
Accident consequences.....	164
Uncertainty.....	164
Sabotage and terrorism.....	165
Noninvolved and involved workers	165
NEPA accident analysis and case law	166
Judicial review of scientific issues.....	166
Endnotes.....	167

Chapter 4 Social impact assessment and environmental justice	171
Defining SIA	171
Benefits and considerations	173
SIA in environmental impact assessments.....	174
Principles for socioeconomic impact assessment	174
Problems, authority, and conflicts in SIA	174
Preparing the SIA.....	179
Socioeconomic impact assessment and NEPA.....	179
Interrelation of SIA and impact assessment for other environmental resources	179
Native Americans	180
Evaluating the three stages of a project	181
Identification of socioeconomic assessment variables	182
Generalized socioeconomic impact assessment process.....	183
Step 1: Public involvement.....	183
Step 2: Establishing the baseline of human environment and conditions.....	184
Step 3: Scoping	184
Step 4: Impact investigation	185
Step 5: Forecasting impacts	186
Step 6: Assessing alternatives and mitigation	186
Step 7: Monitoring	187
Commonly encountered problems	187
Inexperienced consultants.....	188
Scope, scale, and thresholds.....	188
Mitigation.....	188
Spirituality.....	189
Environmental justice.....	189
Background	190
Executive Order 12898.....	190
Council on Environmental Quality guidance.....	191
Environmental Protection Agency guidance	191
Analyzing environmental justice impacts.....	191
Public participation.....	197
Notifications	197
Summary	198
Endnotes.....	198
 Chapter 5 The international environmental impact assessment process.....	 201
Comparison of NEPA with other EIA processes	201
Comparison with World Bank	205
Programmatic and strategic	205
Environmental assessments	205

Goals of the SEA.....	207
Performance criteria.....	207
The relationship between EIA and SEA	207
Comparison of SEA and EIA	208
Guidance for preparing programmatic NEPA assessments.....	209
Programmatic analyses and tiering	211
The similarities and differences between programmatic assessments and tiering.....	213
Addressing deferred issues.....	213
Uses of programmatic analyses	213
Various types of programmatic analyses	215
Direction from CEQ's forty questions	217
Further guidance on preparing a programmatic NEPA analysis	219
Analysis of actions.....	220
Analysis of alternatives.....	220
Impact assessment.....	221
Addressing new information.....	221
Interim actions	222
Problems and limitations.....	223
Optimism bias and the planning fallacy	224
Planning fallacy	224
Disadvantages of project-specific EIAs	225
Endnotes.....	225
Chapter 6 Environmental management systems.....	229
The ISO 14000 standards.....	229
The difference between ISO 14000 and ISO 14001.....	229
Improving the EMS system versus improving environmental performance	229
The environmental management system	231
Essential EMS functions.....	231
Environmental policy	233
Planning function.....	234
Environmental aspects	234
Objectives and targets.....	234
Identifying legal and other requirements.....	235
EMS documents and document control	236
Monitoring and measurement.....	236
Continuous improvement	237
Implementation requirements.....	238
Responsibilities	238
Competence, training, and awareness	238
Communications.....	238
Operational control	238

The complementary benefits of integrating sustainability with a consolidated EIA/EMS.....	238
Historical development of the integrated EIA/EMS system	239
Integrating EIA, EMS, and sustainable development	241
How an EMS and EIA complement each other	241
Developing policies and plans.....	249
Substantive versus procedural requirements.....	249
Analysis requirements	250
Assessing significance	250
Public involvement	251
Incorporating pollution prevention measures	251
Incorporating other environmental requirements	251
Constructing an integrated EIA/EMS/sustainable development process	252
Phase 1	254
Policy	254
Phase 2	255
Planning.....	255
Determining the appropriate sustainability scale and context	255
Analysis, significance, and decision making.....	257
Phase 3	258
Implementation	258
Monitoring, enforcement, and corrective action phase	258
Summary.....	258
Endnotes.....	259
Acronym List	261
Index	263
