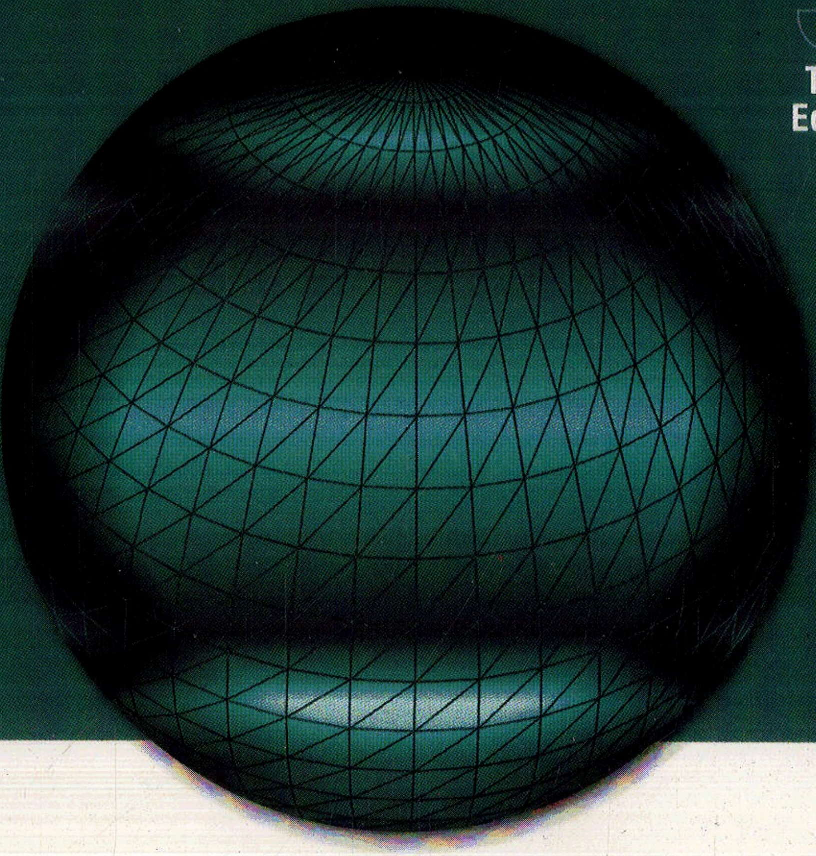
Third Edition



Advanced Mechanics of SOLIDS

L S Srinath

Contents

Preface *v*
List of Symbols *xiii*
SI Units (Systeme International d'Unit'es) *xv*
Typical Physical Constants (As an Aid to Solving Problems) *xvi*

1. Analysis of Stress **1**

1.1 Introduction *1*
1.2 Body Force, Surface Force and Stress Vector *2*
1.3 The State of Stress at a Point *4*
1.4 Normal and Shear Stress Components *4*
1.5 Rectangular Stress Components *4*
1.6 Stress Components on an Arbitrary Plane *6*
1.7 Digression on Ideal Fluid *11*
1.8 Eqality of Cross Shears *11*
1.9 A More General Theorem *13*
1.10 Principal Stresses *14*
1.11 Stress Invariants *16*
1.12 Principal Planes are Orthogonal *17*
1.13 Cubic Equation has Three Real Roots *17*
1.14 Particular Cases *19*
1.15 Recapitulation *19*
1.16 The State of Stress Referred to Principal Axes *24*
1.17 Mohr's Circles for the Three-Dimensional State of Stress *25*
1.18 Mohr's Stress Plane *26*
1.19 Planes of Maximum Shear *28*
1.20 Octahedral Stresses *29*
1.21 The State of Pure Shear *31*
1.22 Decomposition into Hydrostatic and Pure Shear States *31*
1.23 Cauchy's Stress Quadric *34*
1.24 Lame's Ellipsoid *36*
1.25 The Plane State of Stress *38*
1.26 Differential Equations of Equilibrium *40*
1.27 Equilibrium Equations for Plane Stress State *42*
1.28 Boundary Conditions *45*
1.29 Equations of Equilibrium in Cylindrical Coordinates *45*

1.30 Axisymmetric Case and Plane Stress Case *48*
Problems 49
Appendix 1 Mohr's Circles *54*
Appendix 2 The State of Pure Shear *56*
Appendix 3 Stress Quadric of Cauchy *60*

2. Analysis of Strain **63**
2.1 Introduction *63*
2.2 Deformations *64*
2.3 Deformation in the Neighbourhood of a Point *65*
2.4 Change in Length of a Linear Element *67*
2.5 Change in Length of a Linear Element—Linear Components *69*
2.6 Rectangular Strain Components *70*
2.7 The State of Strain at a Point *70*
2.8 Interpretation of γ_{xy}, γ_{yz}, γ_{xz} as Shear Strain Components *71*
2.9 Change in Direction of a Linear Element *73*
2.10 Cubical Dilatation *74*
2.11 Change in the Angle between Two Line Elements *77*
2.12 Principal Axes of Strain and Principal Strains *78*
2.13 Plane State of Strain *83*
2.14 The Principal Axes of Strain Remain Orthogonal after Strain *84*
2.15 Plane Strains in Polar Coordinates *85*
2.16 Compatibility Conditions *86*
2.17 Strain Deviator and its Invariants *90*
Problems 91
Appendix on Compatibility Conditions 94

3. Stress–Strain Relations for Linearly Elastic Solids **97**
3.1 Introduction *97*
3.2 Generalised Statement of Hooke's Law *97*
3.3 Stress–Strain Relations for Isotropic Materials *98*
3.4 Modulus of Rigidity *99*
3.5 Bulk Modulus *101*
3.6 Young's Modulus and Poisson's Ratio *102*
3.7 Relations between the Elastic Constants *102*
3.8 Displacement Equations of Equilibrium *104*
Problems 107

4. Theories of Failure or Yield Criteria and Introduction to Ideally Plastic Solid **109**
4.1 Introduction *109*
4.2 Theories of Failure *110*
4.3 Significance of the Theories of Failure *117*
4.4 Use of Factor of Safety in Design *121*
4.5 A Note on the use of Factor of Safety *124*
4.6 Mohr's Theory of Failure *129*
4.7 Ideally Plastic Solid *132*
4.8 Stress Space and Strain Space *134*

4.9 General Nature of the Yield Locus 135
4.10 Yield Surfaces of Tresca and Von Mises 136
4.11 Stress–Strain Relations (Plastic Flow) 137
4.12 Prandtl–Reuss Equations 139
4.13 Saint Venant–Von Mises Equations 140
Problems 140

5. Energy Methods 143
5.1 Introduction 143
5.2 Hooke's Law and the Principle of Superposition 143
5.3 Corresponding Force and Displacement or Work-Absorbing Component of Displacement 145
5.4 Work Done by Forces and Elastic Strain Energy Stored 146
5.5 Reciprocal Relation 147
5.6 Maxwell–Betti–Rayleigh Reciprocal Theorem 148
5.7 Generalised Forces and Displacements 149
5.8 Begg's Deformeter 152
5.9 First Theorem of Castigliano 153
5.10 Expressions for Strain Energy 155
5.11 Fictitious Load Method 161
5.12 Superposition of Elastic Energies 163
5.13 Statically Indeterminate Structures 164
5.14 Theorem of Virtual Work 166
5.15 Kirchhoff 's Theorem 169
5.16 Second Theorem of Castigliano or Menabrea's Theorem 170
5.17 Generalisation of Castigliano's Theorem or Engesser's Theorem 173
5.18 Maxwell–Mohr Integrals 176
Problems 181

6. Bending of Beams 189
6.1 Introduction 189
6.2 Straight Beams and Asymmetrical Bending 190
6.3 Regarding Euler–Bernoulli Hypothesis 198
6.4 Shear Centre or Centre of Flexure 201
6.5 Shear Stresses in Thin-Walled Open Sections: Shear Centre 202
6.6 Shear Centres for a Few Other Sections 208
6.7 Bending of Curved Beams (Winkler-Bach Formula) 209
6.8 Deflections of Thick Curved Bars 216
Problems 223

7. Torsion 230
7.1 Introduction 230
7.2 Torsion of General Prismatic Bars–Solid Sections 232
7.3 Alternative Approach 236
7.4 Torsion of Circular and Elliptical Bars 240
7.5 Torsion of Equilateral Triangular Bar 243
7.6 Torsion of Rectangular Bars 245

7.7 Membrane Analogy *248*
7.8 Torsion of Thin-Walled Tubes *249*
7.9 Torsion of Thin-Walled Multiple-Cell Closed Sections *251*
7.10 Torsion of Bars with Thin Rectangular Sections *255*
7.11 Torsion of Rolled Sections *256*
7.12 Multiply Connected Sections *259*
7.13 Centre of Twist and Flexural Centre *264*
Problems 265

8. Axisymmetric Problems **269**
8.1 Introduction *269*
8.2 Thick-Walled Cylinder Subjected to Internal and External Pressures—Lame's Problem *271*
8.3 Stresses in Composite Tubes—Shrink Fits *280*
8.4 Sphere with Purely Radial Displacements *287*
8.5 Stresses Due to Gravitation *292*
8.6 Rotating Disks of Uniform Thickness *294*
8.7 Disks of Variable Thickness *298*
8.8 Rotating Shafts and Cylinders *300*
8.9 Summary of Results for use in Problems *303*
Problems 305

9. Thermal Stresses **310**
9.1 Introduction *310*
9.2 Thermoelastic Stress–Strain Relations *311*
9.3 Equations of Equilibrium *311*
9.4 Strain–Displacement Relations *312*
9.5 Some General Results *312*
9.6 Thin Circular Disk: Temperature Symmetrical about Centre *314*
9.7 Long Circular Cylinder *316*
9.8 The Problem of a Sphere *320*
9.9 Normal Stresses in Straight Beams due to Thermal Loading *323*
9.10 Stresses in Curved Beams due to Thermal Loading *325*
Problems 328

10. Elastic Stability **331**
10.1 Euler's Buckling Load *331*
I. Beam Columns *335*
10.2 Beam Column *335*
10.3 Beam Column Equations *335*
10.4 Beam Column with a Concentrated Load *336*
10.5 Beam Column with Several Concentrated Loads *339*
10.6 Continuous Lateral Load *340*
10.7 Beam-Column with End Couple *342*
II. General Treatment of Column Stability Problems (As an Eigenvalue Problem) *344*
10.8 General Differential Equation and Specific Examples *344*

10.9 Buckling Problem as a Characteristic Value (Eigenvalue) Problem *350*
10.10 The Orthogonality Relations *352*

III. Energy Methods for Buckling Problems *355*

10.11 Theorem of Stationary Potential Energy *355*
10.12 Comparison with the Principle of Conservation of Energy *357*
10.13 Energy and Stability Considerations *358*
10.14 Application to Buckling Problems *359*
10.15 The Rayleigh–Ritz Method *360*
10.16 Timoshenko's Concept of Solving Buckling Problems *364*
10.17 Columns with Variable Cross-Sections *366*
10.18 Use of Trigonometric Series *368*
Problems *371*

11. Introduction to Composite Materials **374**

11.1 Introduction *374*
11.2 Stress–Strain Relations *375*
11.3 Basic Cases of Elastic Symmetry *377*
11.4 Laminates *381*
11.5 Ply Stress and Ply Strain *404*
11.6 Failure Criteria of Composite Materials *406*
11.7 Micromechanics of Composites *411*
11.8 Pressure Vessels *421*
11.9 Transverse Stresses *422*
Problems *424*

12. Introduction to Stress Concentration and Fracture Mechanics **428**

Stress Concentration *428*

12.1 Introduction *428*
12.2 Members under Tension *429*
12.3 Members under Torsion *439*
12.4 Members under Bending *443*
12.5 Notch Sensitivity *445*
12.6 Contact Stresses *446*

II. Fracture Mechanics *457*

12.7 Brittle Fracture *457*
12.8 Stress Intensity Factor *458*
12.9 Fracture Toughness *460*
12.10 Fracture Conditions *462*
12.11 Fracture Modes *464*
12.12 Plane Stress and Plane Strain *468*
12.13 Plastic Collapse at a Notch *471*
12.14 Experimental Determination of K_{Ic} *475*
12.15 Strain-Energy Release Rate *476*
12.16 Meaning of Energy Criterion *479*

12.17 Design Consideration *482*
12.18 Elasto-Plastic Fracture Mechanics (EPFM) *482*
12.19 Plane Body *485*
12.20 Green's Thorem *486*
12.21 The J-Integral *486*
12.22 Path Independence of the J-Integral *487*
12.23 J-Integral as a Fracture Criterion *489*
12.24 ASTM-standard Test for J_{IC} *490*
12.25 Relationships of K_C, G_C, and J *491*
Problems *491*

Appendix *494*

Index *500*
