

Roger Prud'homme

Fluid Mechanics
and its Applications

Flows of Reactive Fluids

 Springer

Contents

Preface	VII
List of Symbols	IX
1 Introduction	1
2 Equations of State	7
2.1 Defining the State Variables of a Mixture	8
2.1.1 Classical Parameters	8
2.1.2 Chemical Progress Variable	9
2.1.3 Definitions Required to Describe a Reactive Fluid	10
2.1.4 The Case for Solids	11
2.2 Thermodynamic Functions and Equation of State for Simple Fluids and Solids	12
2.2.1 Thermodynamics Reminder	12
2.2.2 Properties of Simple Fluids at Equilibrium	14
2.2.3 Examples of Laws of State	17
2.2.4 EOS for Solids	24
2.3 Properties of Mixtures	25
2.3.1 General Information	25
2.3.2 Partial Molar Quantities	26
2.3.3 Ideal Mixture	28
2.3.4 Mixture Quantities	28
2.3.5 Activity	29
2.3.6 Ideal Mixture of Perfect Gases	29
2.3.7 A Mixture of Real Gases That Obeys the Virial Relation	31
2.3.8 Liquid Solution	31
2.3.9 Mixture of Real Fluids	33
2.4 Reactive Mixtures	35
2.4.1 Enthalpy of a Chemical Reaction	35
2.4.2 Entropy Production in a Homogeneous Reactive Mixture	36

2.4.3	Chemical Reaction at Equilibrium for a Mixture of Perfect Gases	37
2.4.4	Mixture of Perfect Gases in Chemical Equilibrium	38
2.4.5	Unspecified Multireactive Mixtures	40
2.4.6	Reactive Solutions	41
2.4.7	Extension to Nonequilibrium Mixtures	41
2.5	Thermodynamic Stability	42
2.5.1	The Stability Matrix	42
2.5.2	Case of a Simple Fluid	45
2.5.3	Case of a Mixture with One Degree of Chemical Freedom	46
2.5.4	Case of a Mixture with Several Degrees of Chemical Freedom	46
2.6	Surface Tension	46
2.6.1	One-Component Fluid-Fluid Interfaces	47
2.6.2	Multicomponent Fluid-Fluid Interfaces	50
3	Transfer Phenomena and Chemical Kinetics	51
3.1	General Information on Irreversible Phenomena	52
3.1.1	A Chemical Reaction Near Equilibrium	52
3.1.2	Thermal Exchange	56
3.2	Presenting the Coefficients of Transfer via the Thermodynamics of Irreversible Processes	61
3.2.1	Basic Relations	61
3.2.2	Species Diffusion, Heat Conduction, and Viscosity	62
3.3	Other Ways of Presenting the Transfer Coefficients	63
3.3.1	Presenting the Transfer Coefficients via the Simplified Kinetic Theory of Gases	63
3.3.2	More Precise Estimation of the Transfer Coefficients	66
3.3.3	Liquids and Dense Gases	67
3.4	Elements of Chemical Kinetics	68
4	Balance Equations for Reactive Flows	73
4.1	Passage to the Continuum: Example of Thermal Transfer in a Continuous Medium at Rest	74
4.2	Reminder of the Concepts of the Material Derivative and Strain in a Simple Medium	76
4.3	Mass Balance of Species j and Total Mass Balance in a Composite Medium	78
4.4	General Balance Equation for a Property F	80
4.4.1	Balance Equation Based on the Mean Material Motion $\mathbf{v}(\mathbf{x}, t)$	80
4.4.2	Balance Equation for a Property F Based on an Arbitrary Continuous Motion $\mathbf{W}(\mathbf{x}, t)$	82
4.5	Momentum Balance	83
4.6	Energy Balance	83

4.7	Flux and Entropy Production in a Discrete System	85
4.8	Entropy Balance in a Continuous Medium	89
4.9	Balance Laws for Discontinuities in Continuous Media	90
4.10	Other Methodologies for Balance Laws	92
4.10.1	Total Deterministic Balance	92
4.10.2	Probabilistic Population Balance	93
5	Dimensionless Numbers and Similarity	97
5.1	Elements of Dimensional Analysis: Π_i Ratios	98
5.1.1	Basic Considerations	98
5.1.2	Vashi–Buckingham or Π Theorem	99
5.1.3	Practical Utility of Dimensional Analysis	99
5.1.4	Example: Head Loss in a Cylindrical Pipe	100
5.2	Similarity	101
5.2.1	Definition	101
5.2.2	Example: Similarity of a Flexible Balloon Subjected to a Wind	102
5.3	Analytical Search for the Solutions to a Heat Transfer Problem (Self-Similar Solution)	104
5.4	A Few Dimensionless Numbers	105
6	Chemical Reactors	109
6.1	Ideal and Real Reactors	109
6.2	Homogeneous Perfectly Stirred Chemical Reactors	111
6.2.1	Basic Equations of Perfectly Stirred Reactors	111
6.2.2	Steady Regimes of Perfectly Stirred Reactors	114
6.2.3	Stability Analysis of a Perfectly Stirred Reactor	116
6.3	Residence Time Distribution	121
6.3.1	Basic Equations	121
6.3.2	Homogeneous Well-Stirred Reactor in Steady Mode	122
6.3.3	Piston Reactor	122
6.3.4	Poiseuille Flow	122
6.3.5	Real Reactor	123
7	Coupled Phenomena	127
7.1	General Information	128
7.1.1	Types of Coupled Phenomena	128
7.1.2	Incompressible Nonviscous Fluid	129
7.1.3	Incompressible Viscous Fluid	131
7.1.4	Reactive Incompressible Viscous Flow	132
7.2	Coupling Between Chemical Kinetics and Nondissipative Flow: Compressible Reactive Fluid	132
7.3	Thermal Transfer and Mass Diffusion	140
7.4	Shvab–Zel’dovich Approximation	142
7.5	Phase Change of a Pure Constituent in a Gaseous Mixture	144

7.6	Thermal Osmosis: Minimum Entropy Production	146
7.7	Coupling Between Chemical Kinetics and Dissipative Flow: Laminar Flames	149
7.7.1	Example of a Laminar Premixed Flame: The Bunsen Thin Flame	150
7.7.2	An Example of a Laminar Diffusion Flame	154
7.8	Coupling Between Heat and Momentum Transfer in the Presence of Gravity	158
7.8.1	Historical Considerations	158
7.8.2	Rayleigh–Bénard Instability	159
7.9	Surface Tension and Viscosity	161
7.9.1	Marangoni Effect in a Highly Conducting Fluid Layer	161
7.9.2	Bénard–Marangoni Instability	165
8	Turbulent Flow Concepts	169
8.1	Experimental Evidence for Turbulence	170
8.2	Turbulence Onset and Damping	174
8.2.1	Turbulence Onset Mechanisms: Laminar Flow Instabilities	174
8.2.2	Turbulence Decay Mechanisms: Vortex Dissipation	185
8.3	Classical Turbulence Theory	189
8.3.1	Turbulent Transfer Coefficients and Chemical Kinetics (Simplified Statistical Theory, Incompressible Case)	189
8.3.2	Some Definitions Relating to Turbulence	193
8.3.3	k – ϵ Modeling (Closing the Transfer Terms)	196
8.3.4	Spectral Analysis and Kolmogorov’s Theory	199
8.4	Turbulent Combustion	202
8.4.1	Averaged Balance Equation for Turbulent Combustion	203
8.4.2	Turbulent Regimes for Premixed Combustion	205
8.4.3	Turbulent Regimes for Nonpremixed Combustion	208
8.4.4	Combustion Models	209
8.5	Concepts of Large Eddy Simulation	219
8.5.1	Filtering	220
8.5.2	Filtered Balance Equations	222
8.5.3	Closure Relations for Filtered Balance Equations	223
8.5.4	Spectral Analysis and LES	226
8.6	Conclusion	228
9	Boundary Layers and Fluid Layers	231
9.1	Unsteady Boundary Layers	232
9.1.1	Viscous Boundary Layer in the Laminar Flow of an Incompressible Fluid	232
9.1.2	Diffusional Boundary Layers	234
9.2	Steady Flow of a Viscous Incompressible Fluid Between Two Coaxial Cylinders	235

9.2.1	Laminar Couette Flow	235
9.2.2	Blowing and Aspiration at the Walls	237
9.2.3	Taylor–Couette Instability	240
9.3	Steady Incompressible Laminar Boundary Layer Above a Flat Plate	243
9.3.1	Basic Equations of the Boundary Layer	243
9.3.2	Self-Similar Solutions	247
9.3.3	Blowing and Aspiration at the Wall	249
9.4	Steady Laminar Boundary Layers with Chemical Reactions Above a Flat Plate	251
9.4.1	Boundary Layers with Diffusion	251
9.4.2	The Emmons Problem	254
9.5	The Rotating Disc	260
9.5.1	Viscous Boundary Layer in Laminar Flow	260
9.5.2	Diffusion in the Vicinity of a Rotating Disc	264
9.5.3	A Rotating Disc in Turbulent Flow	266
9.6	Turbulent Boundary Layer and Dimensional Analysis	267
9.6.1	Turbulent Boundary Layer on a Flat Plate	267
9.6.2	Method of Multiple Scales and Dimensional Analysis	270
9.6.3	Turbulent Diffusion and First-Order Chemical Reaction in the Vicinity of a Wall	273
10	Reactive and Nonreactive Waves	277
10.1	Continuous and Discontinuous One-Dimensional Waves in a Barotropic Medium	278
10.1.1	Basic Equations of One-Dimensional Waves	278
10.1.2	Piston Moving in an Infinite Cylinder	280
10.1.3	Speed of a Normal Shock Wave Generated by a Piston	283
10.2	Small Motions of a Fluid in Linearized Theory	287
10.2.1	Case of a Nonreactive Fluid	287
10.2.2	Case of a Monoreactive Fluid	289
10.3	The Case of Small Stationary Disturbances	294
10.3.1	Linearized Theory	294
10.3.2	Small Singular Disturbances and Transonic Flow	296
10.4	The Rankine–Hugoniot Relations	302
10.5	Deflagration Waves	309
10.5.1	Steady Propagation of an Adiabatic Planar Flame	309
10.5.2	Curved Nonadiabatic Flames	313
10.6	Structure of the Planar Detonation Wave	316
10.7	Spherical Waves	323
10.7.1	Case of Small Movements	323
10.7.2	Spherical Flames	324
10.7.3	Blast Waves	326

11	Interface Phenomena	333
11.1	General Information About Interfaces	334
11.1.1	Interfaces and Interfacial Layers	334
11.1.2	Types of Interfaces	334
11.1.3	Thermodynamic Definitions	336
11.2	General Form of Interface Balance Laws	338
11.2.1	Appropriate Form of Bulk Equations	338
11.2.2	General Balance Equation of an Interface	341
11.3	Interface Balance Laws When Surface Variables Obey Classical Thermodynamic Relations	343
11.3.1	Classical Thermodynamic Relations	343
11.3.2	Interface Balance Laws for Species, Mass, Momentum and Energy	344
11.3.3	Interfacial Entropy Production	344
11.4	Constitutive Relations of Interfaces	345
11.4.1	Constitutive Relations Deduced Directly from Linear Irreversible Thermodynamics for Two-Dimensional Interfaces	345
11.4.2	Constitutive Relations for Interfaces Deduced by Applying Irreversible Thermodynamics to Three-Dimensional Interfacial Layers	352
11.5	Interfaces with Resistance to Wrinkling	358
11.6	Concepts of Second-Gradient Theory	363
11.7	Conclusions Regarding Interface Equations	364
12	Multiphase Flow Concepts	365
12.1	Formation of a Two-Phase Flow: Droplet Generation	367
12.2	Simplified Model of a Flow with Particles	373
12.2.1	Variables That Characterize Two-Phase Flow	373
12.2.2	Balance Equations	375
12.2.3	Application to the Study of Small Disturbances	378
12.2.4	Application to the Study of a Vortex in a Dilute Suspension	381
12.3	Flow with Evaporating Droplets	390
12.3.1	Flow Variables	390
12.3.2	Balance Equations for the Flow	391
12.3.3	Application to the Study of Spray Flame Propagation	395
12.4	Problems at the Particle Scale	399
12.4.1	Force Exerted by a Fluid on a Spherical Particle	400
12.4.2	Heat Exchange	408
12.4.3	Steady Combustion of a Fuel Drop in a Combustive Atmosphere at Rest	410
12.4.4	Transient Vaporization of a Droplet	420
12.4.5	Other Cases of Droplet Vaporization and Combustion	427

A Appendix	429
A.1 Tensor Notation	429
A.2 Motion and Field of Deformation of an Interfacial Layer	431
A.3 Geometry of Interfaces and Interfacial Layers in Curvilinear Coordinates	432
A.4 Kinematics of Interfaces and Interfacial Layers	439
A.5 Supercritical Fluids	442
A.5.1 Thermodynamic Properties of Supercritical Fluids	442
A.5.2 Supercritical Fluid Flows	446
A.6 More on Transfer Coefficient Determination	449
A.6.1 Collision Integrals and Cross-sections	449
A.6.2 Transfer Coefficients for Pure Gases	452
A.6.3 Transfer Coefficients for Gas Mixtures	454
References	457
Index	471
