

Daniel Alpay

# A Complex Analysis Problem Book

Birkhäuser

# Contents

Prologue	1
<b>I Complex Numbers</b>	<b>9</b>
<b>1 Complex Numbers: Algebra</b>	<b>11</b>
1.1 First properties of the complex numbers . . . . .	11
1.2 The exponential function . . . . .	22
1.3 Computing some sums . . . . .	26
1.4 Confinement lemma and other bounds . . . . .	29
1.5 Polynomials . . . . .	29
1.6 Solutions . . . . .	32
<b>2 Complex Numbers: Geometry</b>	<b>61</b>
2.1 Geometric interpretation . . . . .	61
2.2 Circles and lines and geometric sets . . . . .	64
2.3 Moebius maps . . . . .	66
2.4 Solutions . . . . .	70
<b>3 Complex Numbers and Analysis</b>	<b>87</b>
3.1 Complex-valued functions defined on an interval . . . . .	87
3.2 Sequences of complex numbers . . . . .	92
3.3 Series of complex numbers . . . . .	93
3.4 Power series and elementary functions . . . . .	95
3.5 Summable families . . . . .	103
3.6 Infinite products . . . . .	103
3.7 Solutions . . . . .	113
<b>II Functions of a Complex Variable</b>	<b>141</b>
<b>4 Cauchy-Riemann Equations and <math>\mathbb{C}</math>-differentiable Functions</b>	<b>143</b>
4.1 Continuous functions . . . . .	143

4.2	Derivatives . . . . .	148
4.3	Various counterexamples . . . . .	156
4.4	Analytic functions . . . . .	157
4.5	Solutions . . . . .	163
<b>5</b>	<b>Cauchy's Theorem</b>	<b>193</b>
5.1	Line integrals . . . . .	193
5.2	The fundamental theorem of calculus for holomorphic functions . .	197
5.3	Computations of integrals . . . . .	200
5.4	Riemann's removable singularities theorem (Hebbarktssatz) . . .	203
5.5	Cauchy's formula and applications . . . . .	205
5.6	Power series expansions of analytic functions . . . . .	211
5.7	Primitives and logarithm . . . . .	215
5.8	Analytic square roots . . . . .	219
5.9	Solutions . . . . .	220
<b>6</b>	<b>Morera, Liouville, Schwarz, et les autres: First Applications</b>	<b>275</b>
6.1	Zeroes of analytic functions . . . . .	275
6.2	Analytic continuation . . . . .	278
6.3	The maximum modulus principle . . . . .	280
6.4	Schwarz' lemma . . . . .	281
6.5	Series of analytic functions . . . . .	285
6.6	Analytic functions as infinite products . . . . .	287
6.7	Liouville's theorem and the fundamental theorem of algebra . . .	288
6.8	Solutions . . . . .	291
<b>7</b>	<b>Laurent Expansions, Residues, Singularities and Applications</b>	<b>317</b>
7.1	Laurent expansions . . . . .	318
7.2	Singularities . . . . .	320
7.3	Residues and the residue theorem . . . . .	324
7.4	Rouché's theorem . . . . .	327
7.5	Rational functions . . . . .	328
7.6	An application to periodic entire functions . . . . .	332
7.7	Solutions . . . . .	333
<b>8</b>	<b>Computations of Definite Integrals Using the Residue Theorem</b>	<b>365</b>
8.1	Integrals on the real line of rational functions . . . . .	365
8.2	Rational multiplied by trigonometric . . . . .	367
8.3	Integrals of rational functions on a half-line . . . . .	369
8.4	Integrals of rational expressions of the trigonometric functions .	372
8.5	Solutions . . . . .	375

<b>III Applications and More Advanced Topics</b>	<b>393</b>
<b>9 Harmonic Functions</b>	<b>395</b>
9.1 Harmonic functions . . . . .	395
9.2 Harmonic conjugate . . . . .	397
9.3 Various . . . . .	400
9.4 The Dirichlet problem . . . . .	402
9.5 Solutions . . . . .	403
<b>10 Conformal Mappings</b>	<b>421</b>
10.1 Uniform convergence on compact sets . . . . .	421
10.2 One-to-oneness . . . . .	422
10.3 Conformal mappings . . . . .	424
10.4 Solutions . . . . .	425
<b>11 A Taste of Linear System Theory and Signal Processing</b>	<b>431</b>
11.1 Continuous signals . . . . .	431
11.2 Sampling . . . . .	432
11.3 Time-invariant causal linear systems . . . . .	434
11.4 Discrete signals and systems . . . . .	436
11.5 The Schur algorithm . . . . .	438
11.6 Solutions . . . . .	441
<b>IV Appendix</b>	<b>447</b>
<b>12 Some Useful Theorems</b>	<b>449</b>
12.1 Differentiable functions of two real variables . . . . .	449
12.2 Cauchy's multiplication theorem . . . . .	451
12.3 Summable families . . . . .	453
12.4 Weierstrass' theorem . . . . .	456
12.5 A weak form of Fubini's theorem . . . . .	457
12.6 Interchanging integration and derivation . . . . .	459
12.7 Interchanging sum or products and limit . . . . .	459
<b>13 Some Topology</b>	<b>463</b>
13.1 Point topology . . . . .	463
13.2 Compact spaces . . . . .	466
13.3 Plane topology . . . . .	466
13.4 Compactification . . . . .	468
13.5 Some points of algebraic topology . . . . .	469
13.6 A direct solution of the fundamental theorem of algebra . . . . .	470
13.7 Solutions . . . . .	474

<b>14 Some Functional Analysis Essentials</b>	<b>479</b>
14.1 Hilbert and Banach spaces . . . . .	479
14.2 Countably normed spaces . . . . .	483
14.3 Reproducing kernel Hilbert spaces . . . . .	484
14.4 Solutions . . . . .	487
<b>15 A Brief Survey of Integration</b>	<b>495</b>
15.1 Introduction . . . . .	495
15.2 $\sigma$ -algebras and measures . . . . .	497
15.3 Positive measures and integrals . . . . .	499
15.4 Functions with values in $[-\infty, \infty]$ . . . . .	500
15.5 The main theorems . . . . .	500
15.6 Carathéodory's theorem and the Lebesgue measure . . . . .	502
15.7 Completion of measures . . . . .	503
15.8 Density results . . . . .	504
15.9 The Fourier transform . . . . .	505
15.10 Solutions . . . . .	506
<b>Bibliography</b>	<b>513</b>
<b>Index</b>	<b>523</b>
