<b>Chapter 1</b>	<b>Hydrology, Climate Change, and Sustainability</b>	<b>1</b>
------------------	--	----------

---

1.1	Introduction to Hydrologic Processes	1
1.1.1	What is Hydrology?	1
1.1.2	Why Study Hydrology?	1
1.1.3	The Hydrologic Cycle	3
1.1.4	Hydrologic Systems	4
1.1.5	Surface Water in the Hydrologic Cycle	5
1.1.6	Groundwater in the Hydrologic Cycle	5
1.1.7	Control Volume Approach for Hydrologic Processes	7
1.2	Climate Change Effects and the Hydrologic Cycle	8
1.2.1	The Climate System	8
1.2.2	What is Climate Change?	10
1.2.3	Climate Change Prediction	11
1.2.4	Hydrologic Effects of Climate Change	12
1.3	Anthropogenic Effects on the Hydrologic Cycle	16
1.3.1	Urbanization	16
1.3.2	Land and Water Management Effects on the Hydrologic Cycle	17
1.4	Water Resources Sustainability	18
1.5	Hydrologic Budgets	19
1.6	Hydrologic Data and Publication Sources	21
1.7	U.S. Geological Survey Publications	22
	Problems	25
	References	25

---

<b>Chapter 2</b>	<b>Occurrence of Groundwater</b>	<b>27</b>
------------------	----------------------------------	-----------

---

2.1	Origin of Groundwater	27
2.2	Rock Properties Affecting Groundwater	27
2.2.1	Aquifers	27
2.2.2	Porosity	28
2.2.3	Soil Classification	31
2.2.4	Porosity and Representative Elementary Volume	33
2.2.5	Specific Surface	33
2.3	Vertical Distribution of Groundwater	36
2.4	Zone of Aeration	37
2.4.1	Soil Water Zone	37
2.4.2	Intermediate Vadose Zone	38
2.4.3	Capillary Zone	38
2.4.4	Measurement of Water Content	40
2.4.5	Available Water	40
2.5	Zone of Saturation	41

2.5.1	Specific Retention	41
2.5.2	Specific Yield	41
2.6	Geologic Formations as Aquifers	42
2.6.1	Alluvial Deposits	43
2.6.2	Limestone	43
2.6.3	Volcanic Rock	44
2.6.4	Sandstone	46
2.6.5	Igneous and Metamorphic Rocks	46
2.6.6	Clay	46
2.7	Types of Aquifers	46
2.7.1	Unconfined Aquifer	46
2.7.2	Confined Aquifers	46
2.7.3	Leaky Aquifer	48
2.7.4	Idealized Aquifer	48
2.8	Storage Coefficient	48
2.9	Groundwater Basins/Regional Groundwater Flow Systems	50
2.9.1	High Plains Aquifer	52
2.9.2	Gulf Coastal Plain Aquifer System	54
2.10	Springs	54
2.10.1	What Are Springs?	54
2.10.2	Edwards Aquifer—Discharge of Springs	61
2.11	Groundwater in the United States	63
	Problems	70
	References	71

<b>Chapter 3</b>	<b>Groundwater Movement</b>	<b>75</b>
3.1	Darcy's Law	75
3.1.1	Experimental Verification	75
3.1.2	Darcy Velocity	78
3.1.3	Validity of Darcy's Law	78
3.2	Permeability	79
3.2.1	Intrinsic Permeability	79
3.2.2	Hydraulic Conductivity	80
3.2.3	Transmissivity	80
3.2.4	Hydraulic Conductivity of Geologic Materials	81
3.3	Determination of Hydraulic Conductivity	82
3.3.1	Formulas	82
3.3.2	Laboratory Methods	83
3.3.3	Tracer Tests	85
3.3.4	Auger Hole Tests	87
3.3.5	Pumping Tests of Wells	88
3.4	Anisotropic Aquifers	89
3.5	Groundwater Flow Rates	91
3.6	General Flow Equations	93
3.7	Unsaturated Flow	95
3.7.1	Flow Through Unsaturated Soils	96
3.7.2	Unsaturated Hydraulic Conductivity	99
3.7.3	Vertical and Horizontal Flows	103
	Problems	104
	References	105

<b>Chapter 4</b>	<b>Groundwater and Well Hydraulics</b>	<b>109</b>
4.1	Steady Unidirectional Flow	109
4.1.1	Confined Aquifer	109
4.1.2	Unconfined Aquifer	110
4.1.3	Base Flow to a Stream	112
4.2	Steady Radial Flow to a Well	115
4.2.1	Confined Aquifer	115
4.2.2	Unconfined Aquifer	120
4.2.3	Unconfined Aquifer with Uniform Recharge	122
4.3	Well in a Uniform Flow	124
4.4	Unsteady Radial Flow in a Confined Aquifer	126
4.4.1	Nonequilibrium Well Pumping Equation	126
4.4.2	Theis Method of Solution	127
4.4.3	Cooper–Jacob Method of Solution	129
4.4.4	Chow Method of Solution	132
4.4.5	Recovery Test	132
4.5	Unsteady Radial Flow in an Unconfined Aquifer	135
4.6	Unsteady Radial Flow in a Leaky Aquifer	140
4.7	Well Flow Near Aquifer Boundaries	143
4.7.1	Well Flow Near a Stream	143
4.7.2	Well Flow Near an Impermeable Boundary	148
4.7.3	Well Flow Near Other Boundaries	151
4.7.4	Location of Aquifer Boundary	153
4.8	Multiple Well Systems	154
4.9	Partially Penetrating Wells	158
4.10	Well Flow for Special Conditions	160
4.11	Slug Tests	161
4.11.1	Definition	161
4.11.2	Design Guidelines	161
4.11.3	Performance of Slug Tests	162
4.11.4	Methods for Analyzing Slug-Test Data	164
4.12	Slug Tests for Confined Formations	166
4.12.1	Cooper, Bredehoeft, and Papadopoulos Method	166
4.12.2	Hvorslev Method	170
4.13	Slug Tests for Unconfined Formations	172
4.13.1	Bouwer and Rice Method	173
4.13.2	Dagan Method	179
	Problems	182
	References	189
<b>Chapter 5</b>	<b>Artificial Recharge, Stormwater Infiltration, and Saltwater Intrusion Prevention</b>	<b>193</b>
5.1	Artificial Recharge	193
5.1.1	Recharge Systems	193
5.1.2	Recharge Mounds	195
5.2	Stormwater Infiltration Basin Mound Development	203
5.2.1	Potential Flow Model for a Trench	204
5.2.2	Potential Flow Model for Circular Basin	205
5.2.3	Mound Growth	208
5.2.4	Mound Recession	209

5.3	Saline Water Intrusion in Aquifers	210
5.3.1	Occurrence of Saline Water Intrusion	210
5.3.2	Ghyben–Herzberg Relation Between Freshwater and Saline Water	211
5.3.3	Shape of the Freshwater–Saltwater Interface	213
5.3.4	Structure of the Freshwater–Saltwater Interface	216
5.3.5	Effect of Wells on Seawater Intrusion	219
5.3.6	Upconing of Saline Water	221
5.3.7	Control of Saline Water Intrusion	225
	Problems	227
	References	228

---

<b>Chapter 6</b>	<b>Groundwater Flow Modeling</b>	<b>231</b>
------------------	----------------------------------	------------

---

6.1	Introduction	231
6.1.1	Why Develop Groundwater Models?	231
6.1.2	Types of Groundwater Models	232
6.1.3	Steps in the Development of a Groundwater Model	232
6.2	Three-Dimensional Groundwater Flow Model	233
6.2.1	Derivation of Finite Difference Equations	233
6.2.2	Simulation of Boundaries	239
6.2.3	Vertical Discretization	239
6.2.4	Hydraulic Conductance Equations	240
6.3	MODFLOW-2005 Description	243
6.3.1	Model Introduction	243
6.3.2	Space and Time Discretization	245
6.3.3	External Sources and Stresses	246
6.3.4	Hydraulic Conductance—Layer-Property Flow (LPF) Package	248
6.3.5	Solver Packages	251
6.3.6	Telescopic Mesh Refinement	252
6.4	Case Study: Using MODFLOW: Lake Five-O, Florida	256
6.4.1	Finite Difference Grid and Boundary Conditions	256
6.4.2	Model Calibration and Sensitivity Analysis	256
6.4.3	Model Results	260
6.5	Example Applications and Input of MODFLOW	261
	Problems	270
	References	271

---

<b>Chapter 7</b>	<b>Hydrologic Processes</b>	<b>273</b>
------------------	-----------------------------	------------

---

7.1	Introduction to Surface Water Hydrology	273
7.1.1	What is Surface Water Hydrology?	273
7.1.2	The Hydrologic Cycle	273
7.1.3	Hydrologic Systems	273
7.1.4	Atmospheric and Ocean Circulation	278
7.1.5	Hydrologic Budget	280
7.2	Precipitation (Rainfall)	281
7.2.1	Precipitation Formation and Types	281
7.2.2	Rainfall Variability	282
7.2.3	Disposal of Rainfall on a Watershed	283
7.2.4	Design Storms	286
7.2.5	Estimated Limiting Storms	301

7.3	Evaporation	304
7.3.1	Energy Balance Method	304
7.3.2	Aerodynamic Method	307
7.3.3	Combined Method	309
7.4	Infiltration	310
7.4.1	Unsaturated Flow	310
7.4.2	Green–Ampt Method	313
7.4.3	Other Infiltration Methods	319
	Problems	321
	References	324

---

<b>Chapter 8</b>	<b>Surface Runoff</b>	<b>327</b>
------------------	-----------------------	------------

---

8.1	Drainage Basins and Storm Hydrographs	327
8.1.1	Drainage Basins and Runoff	327
8.2	Hydrologic Losses, Rainfall Excess, and Hydrograph Components	331
8.2.1	Hydrograph Components	333
8.2.2	$\Phi$ -Index Method	333
8.2.3	Rainfall-Runoff Analysis	335
8.3	Rainfall-Runoff Analysis Using Unit Hydrograph Approach	335
8.4	Synthetic Unit Hydrographs	338
8.4.1	Snyder's Synthetic Unit Hydrograph	338
8.4.2	Clark Unit Hydrograph	339
8.5	S-Hydrographs	343
8.6	NRCS (SCS) Rainfall-Runoff Relation	345
8.7	Curve Number Estimation and Abstractions	347
8.7.1	Antecedent Moisture Conditions	347
8.7.2	Soil Group Classification	348
8.7.3	Curve Numbers	351
8.8	NRCS (SCS) Unit Hydrograph Procedure	354
8.8.1	Time of Concentration	355
8.8.2	Time to Peak	357
8.8.3	Peak Discharge	357
8.9	Kinematic Wave Overland Flow Runoff Model	358
8.10	Computer Models for Rainfall-Runoff Analysis	363
	Problems	365
	References	372

---

<b>Chapter 9</b>	<b>Reservoir and Streamflow Routing</b>	<b>375</b>
------------------	---	------------

---

9.1	Routing	375
9.2	Hydrologic Reservoir Routing	376
9.3	Hydrologic River Routing	380
9.4	Hydraulic (Distributed) Routing	384
9.4.1	Unsteady Flow Equations: Continuity Equation	385
9.4.2	Momentum Equation	387
9.5	Kinematic Wave Model for Channels	390
9.5.1	Kinematic Wave Equations	390
9.5.2	U.S. Army Corps of Engineers Kinematic Wave Model for Overland Flow and Channel Routing	392
9.5.3	KINEROS2 Channel Flow Routing Model	393
9.5.4	Kinematic Wave Celerity	394

9.6	Muskingum–Cunge Model	395
9.7	Implicit Dynamic Wave Model	396
9.8	Distributed Routing in U.S. Army Corps of Engineers HEC-RAS	398
	Problems	401
	References	406
<b>Chapter 10</b>	<b>Probability, Risk, and Uncertainty Analysis for Hydrologic and Hydraulic Design</b>	<b>407</b>
10.1	Probability Concepts	407
10.2	Commonly Used Probability Distributions	410
	10.2.1 Normal Distribution	410
	10.2.2 Log-Normal Distribution	410
	10.2.3 Gumbel (Extreme Value Type I) Distribution	413
10.3	Hydrologic Design for Water Excess Management	414
	10.3.1 Hydrologic Design Scale	414
	10.3.2 Hydrologic Design Level (Return Period)	416
	10.3.3 Hydrologic Risk	416
	10.3.4 Hydrologic Data Series	417
10.4	Hydrologic Frequency Analysis	419
	10.4.1 Frequency Factor Equation	419
	10.4.2 Application of Log-Pearson III Distribution	420
	10.4.3 Extreme Value Distribution	425
10.5	U.S. Water Resources Council Guidelines for Flood Flow Frequency Analysis	425
	10.5.1 Procedure	426
	10.5.2 Testing for Outliers	427
10.6	Analysis of Uncertainties	430
10.7	Risk Analysis: Composite Hydrologic and Hydraulic Risk	433
	10.7.1 Reliability Computation by Direct Integration	434
	10.7.2 Reliability Computation Using Safety Margin/Safety Factor	435
10.8	Computer Models for Flood-Flow Frequency Analysis	437
	Problems	438
	References	441
<b>Chapter 11</b>	<b>Hydrologic Design and Floodplain Analysis</b>	<b>443</b>
11.1	Hydrologic Design for Stormwater Management: Storm Sewers Design	443
	11.1.1 Rational Method Design	443
	11.1.2 Risk-Based Design of Storm Sewers	451
11.2	Hydrologic Design of Stormwater Detention	453
	11.2.1 Why Detention? Effects of Urbanization	453
	11.2.2 Sizing Detention	454
	11.2.3 Detention Basin Routing	455
	11.2.4 Preliminary Sizing of Detention: Modified Rational Method	456
	11.2.5 Infiltration Basin Design	460
11.3	Floodplain Analysis	461
	11.3.1 Floodplain Analysis Components	461
	11.3.2 Floodplain Hydraulics	464
	11.3.3 Water Surface Profile Computation	468
11.4	Flood-Control Alternatives	472
	11.4.1 Structural Alternatives	473
	11.4.2 Nonstructural Alternatives	477
	11.4.3 Flood Damage and Net Benefit Estimation	478

11.5	Urban Flood Management: A Matter of Water Resources Sustainability	480
11.5.1	Urban Flood Management and Sustainability	480
11.5.2	Climate Change, Urbanization, and Integrated Management	481
11.5.3	Developing Countries and Flood Management	482
11.5.4	Developed Countries and Flood Disasters	482
11.6	Water Supply for Crop Water Requirements: Evapotranspiration Calculations	483
11.6.1	Combination Equation	483
11.6.2	FAO-56 Penman–Monteith Equation	484
11.6.3	Meteorological Data and Factors	485
11.6.4	Radiation Calculations	489
11.6.5	ASCE-EWRI Standardized Penman-Monteith Equation	493
11.7	Hydrologic Design for Water Supply	494
11.7.1	Surface Water Reservoir Systems	494
11.7.2	Storage—Firm Yield Analysis for Water Supply	495
11.7.3	Reservoir Simulation	503
	Problems	505
	References	508
<b>Chapter 12</b>	<b>Hydrologic Measurement</b>	<b>511</b>
12.1	Atmosphere-Land Interface	511
12.1.1	Wind, Humidity, and Solar Radiation	512
12.1.2	Precipitation	515
12.1.3	Evaporation	519
12.1.4	Weather/Climate Stations	521
12.1.5	Infiltration	522
12.2	Discharge Measurement	523
12.2.1	Weir	523
12.2.2	Flumes	527
12.3	Streamflow Measurement	528
12.3.1	Measuring Stage	528
12.3.2	Velocity-Area-Integration Method	531
12.3.3	Acoustic Doppler Current Profiler	533
12.4	Groundwater Measurement	534
12.5	Automated Data Acquisition and Transmission Systems	536
12.6	Hydrologic Monitoring Systems	538
12.6.1	Urban Stormwater Systems	538
12.6.2	Flood Early-Warning Systems	541
	Problems	541
	References	542
<b>Chapter 13</b>	<b>Hydrology of Specific Climates</b>	<b>543</b>
13.1	Hydrology of Arid and Semiarid Climates	543
13.1.1	Physical Features	543
13.1.2	Hydrologic Processes	545
13.1.3	Rainfall Hyetographs for Arabian Gulf States	548
13.1.4	Design Rainfall Patterns for Arizona	549
13.1.5	Hydrology of Alluvial Fan Flooding	549
13.2	Hydrology of Cold Climates	555
13.2.1	Snowpack, Snow Water Equivalent, and Snowmelt Runoff	556
13.2.2	Snowmelt—Energy Budget Solutions	558

13.2.3	Snowmelt—Temperature Index Solutions	561
13.2.4	Models for Snowmelt Runoff	562
13.3	Hydrology of Humid Tropical Climates	562
13.3.1	ENSO: El Niño-Southern Oscillation	563
13.3.2	Rainfall for Drainage Design	565
13.3.3	Rainfall Interception—Vegetation Canopy	567
13.4	Introduction to Watershed Hydrology Models	569
13.4.1	What are Watershed Models?	570
13.4.2	Classification of Watershed Models	571
13.4.3	Distributed Model Spatial Configurations	572
13.4.4	Discussion of Selected Models	573
