

Advanced Structural Ceramics

BIKRAMJIT BASU KANTESH BALANI

Contents

Preface	xvii
Foreword by Michel Barsoum	xxiii
About the Authors	xxv

Section One Fundamentals of Nature and Characteristics of Ceramics

1. Ceramics: Definition and Characteristics	3
1.1 Materials Classification	3
1.2 Historical Perspective; Definition and Classification of Ceramics	4
1.3 Properties of Structural Ceramics	8
1.4 Applications of Structural Ceramics	9
References	12
2. Bonding, Structure, and Physical Properties	14
2.1 Primary Bonding	15
2.1.1 Ionic Bonding	15
2.1.2 Covalent Bonding	18
2.1.3 Pauling's Rules	19
2.1.4 Secondary Bonding	21
2.2 Structure	21
2.2.1 NaCl-type Rock-Salt Structure	22
2.2.2 ZnS-Type Wurtzite Structure	22
2.2.3 ZnS-Type Zinc Blende Structure	23
2.2.4 CsCl Cesium Chloride Structure	23
2.2.5 CaF ₂ Fluorite Structure	23
2.2.6 Antifluorite Structure	24
2.2.7 Rutile Structure	24
2.2.8 Al ₂ O ₃ Corundum Structure	24
2.2.9 Spinel Structure	25
2.2.10 Perovskite Structure	26
2.2.11 Ilmenite Structure	26
2.2.12 Silicate Structures	26

2.3	Oxide Ceramics	28
2.4	Non-Oxide Ceramics	30
References		33

3. Mechanical Behavior of Ceramics

34

3.1	Theory of Brittle Fracture	34
3.1.1	Theoretical Cohesive Strength	34
3.1.2	Inglis Theory	35
3.1.3	Griffith's Theory	37
3.1.4	Irwin's Theory	39
3.1.5	Concept of Fracture Toughness	39
3.2	Cracking in Brittle Materials	40
3.3	Strength Variability of Ceramics	42
3.4	Physics of the Fracture of Brittle Solids	42
3.4.1	Weakest Link Fracture Statistics	44
3.5	Basic Mechanical Properties	48
3.5.1	Vickers Hardness	48
3.5.2	Instrumented Indentation Measurements	48
3.5.3	Compressive Strength	50
3.5.4	Flexural Strength	51
3.5.5	Elastic Modulus	52
3.5.6	Fracture Toughness	53
3.5.6.1	Long Crack Methods	54
3.5.6.2	Fracture Toughness Evaluation Using Indentation Cracking	55
3.6	Toughening Mechanisms	59
References		63

Section Two Processing of Ceramics

4. Synthesis of High-Purity Ceramic Powders

67

4.1	Synthesis of ZrO_2 Powders	67
4.2	Synthesis of TiB_2 Powders	68
4.3	Synthesis of Hydroxyapatite Powders	70
4.4	Synthesis of High-Purity Tungsten Carbide Powders	71
References		75

5. Sintering of Ceramics

76

5.1	Introduction	76
5.2	Classification	78
5.3	Thermodynamic Driving Force	79

5.4	Solid-State Sintering	82
5.5	Competition between Densification and Grain Growth	84
5.6	Liquid-Phase Sintering	88
5.7	Important Factors Influencing the Sintering Process	90
5.8	Powder Metallurgical Processes	92
5.8.1	Ball Milling	92
5.8.2	Compaction	94
	5.8.2.1 Cold Pressing	94
	5.8.2.2 Cold Isostatic Pressing	96
5.8.3	Pressureless Sintering	97
5.8.4	Reactive Sintering	98
5.8.5	Microwave Sintering	99
References		103

6. Thermomechanical Sintering Methods 105

6.1	Hot Pressing	105
6.2	Extrusion	108
6.3	Hot Isostatic Pressing	110
6.4	Hot Rolling	112
6.5	Sinter Forging	114
6.6	Spark Plasma Sintering	116
References		118

Section Three Surface Coatings

7. Environment and Engineering of Ceramic Materials 123

7.1	Environmental Influence on Properties of Engineering Ceramics	124
7.1.1	Oxidation Resistance	125
7.1.2	Corrosion Resistance	126
7.1.3	Creep Resistance	126
7.1.4	Hard Bearing Surfaces	126
7.1.5	Thermal and Electrical Insulation	126
7.1.6	Abrasion-Resistant Ceramics	127
7.1.7	Fretting Wear Resistance, Surface Fatigue, Impact Resistance	127
7.1.8	Erosion and Cavitation Resistance	127
7.2	Classification and Engineering of Ceramic Materials	128
7.2.1	Non-Oxide Ceramics	128
7.2.2	Oxide Ceramics	132
References		135

8. Thermal Spraying of Ceramics	137
8.1 Mechanism of Thermal Spraying	137
8.1.1 Advantages of Thermal Spraying	140
8.1.2 Disadvantages of Thermal Spraying	141
8.2 Classification of Thermal Spraying	141
8.2.1 Combustion Thermal Spraying	142
8.2.1.1 Flame (Powder or Wire) Spraying	142
8.2.1.2 High-Velocity Oxy-Fuel Spraying	144
8.2.1.3 Detonation Spray Technique	145
8.2.2 Electric Arc Spraying	148
8.2.3 Cold Spraying	149
8.2.4 Plasma Spraying	150
8.2.4.1 Atmospheric Plasma Spraying	152
8.2.4.2 Vacuum Plasma Spraying	154
8.3 Splat Formation and Spread	154
8.4 Near Net Shape Forming	156
8.5 Overview	157
References	158

9. Coatings and Protection of Structural Ceramics	160
9.1 Coatings	160
9.2 Protective Coatings	162
9.2.1 Biological Applications	162
9.3 Rocket Nozzle Inserts	163
9.4 Thermal Barrier Coatings	165
9.5 Wear Resistance	166
9.6 Corrosion Protection by Ceramics	168
9.7 Optically Transparent Ceramics	169
9.8 Ceramic Pottery and Sculptures	169
References	170

Section Four: Processing and Properties of Toughened Ceramics

10. Toughness Optimization in Zirconia-Based Ceramics	175
10.1 Introduction	175
10.2 Transformation Characteristics of Tetragonal Zirconia	176
10.3 Phase Equilibria and Microstructure	177

10.4	Transformation Toughening	178
10.4.1	Thermodynamics of Transformation	179
10.4.2	Micromechanical Modeling	180
10.5	Stabilization of Tetragonal Zirconia	182
10.6	Production and Properties of Y-TZP Ceramics	183
10.7	Different Factors Influencing Transformation Toughening	184
10.7.1	Grain Size	187
10.7.2	Grain Shape and Grain Boundary Phase	188
10.7.3	Yttria Content	192
10.7.4	Yttria Distribution	193
10.7.5	M_s Temperature	197
10.7.6	Transformation Zone Size and Shape	197
10.7.7	Residual Stress	199
10.8	Additional Toughening Mechanisms	199
10.8.1	Stress-Induced Microcracking	200
10.8.2	Ferroelastic Toughening	201
10.9	Coupled Toughening Response	203
10.10	Toughness Optimization in Y-TZP-Based Composites	203
10.10.1	Influence of Thermal Residual Stresses	206
10.10.2	Influence of Zirconia Matrix Stabilization	207
10.11	Outlook	208
References		208

11. S-Phase SiAlON Ceramics: Microstructure and Properties **215**

11.1	Introduction	215
11.2	Materials Processing and Property Measurements	216
11.3	Microstructural Development	217
11.4	Mechanical Properties	220
11.4.1	Load-Dependent Hardness Properties	226
11.4.2	R-Curve Behavior	228
11.5	Concluding Remarks	230
References		232

12. Toughness and Tribological Properties of MAX Phases **234**

12.1	Emergence of MAX Phases	234
12.2	Classification of MAX Phases	235
12.3	Damage Tolerance of MAX Phases	238

12.4	Wear of Ti_3SiC_2 MAX Phase	244
12.5	Concluding Remarks	254
	References	254

Section Five High-Temperature Ceramics

13. Overview: High-Temperature Ceramics 259

13.1	Introduction	259
13.2	Phase Diagram and Crystal Structure	260
13.3	Processing, Microstructure, and Properties of Bulk TiB_2	261
13.3.1	Preparation of TiB_2 Powder	261
13.3.2	Densification and Microstructure of Binderless TiB_2	265
13.4	Use of Metallic Sinter-Additives on Densification and Properties	269
13.5	Influence of Nonmetallic Additives on Densification and Properties	271
13.6	Important Applications of Bulk TiB_2 -Based Materials	281
13.7	Concluding Remarks	281
	References	283

14. Processing and Properties of TiB_2 and ZrB_2 with Sinter-Additives 286

14.1	Introduction	286
14.2	Materials Processing	287
14.3	TiB_2 - MoSi_2 System	288
14.3.1	Densification, Microstructure, and Sintering Reactions	288
14.3.2	Mechanical Properties	288
14.3.3	Depth Sensing Instrumented Indentation Response	290
14.3.4	Residual Strain-Induced Property Degradation	293
14.3.5	Relationship between Indentation Work Done and Phase Assemblage	295
14.4	TiB_2 - TiSi_2 System	296
14.4.1	Sintering Reactions and Densification Mechanisms	296
14.4.2	Mechanical Properties	298
14.4.3	Residual Stress or Strain and Property Degradation	298
14.5	ZrB_2 - SiC - TiSi_2 Composites	300
14.6	Concluding Remarks	301
	References	302

15. High-Temperature Mechanical and Oxidation Properties	305
15.1 Introduction	305
15.2 High-Temperature Property Measurements	309
15.3 High-Temperature Mechanical Properties	310
15.3.1 High-Temperature Flexural Strength	310
15.3.2 Hot Hardness Property	311
15.4 Oxidation Behavior of $\text{TiB}_2\text{--MoSi}_2$	312
15.5 Oxidation Behavior of $\text{TiB}_2\text{--TiSi}_2$	315
15.5.1 Oxidation Kinetics	315
15.5.2 Morphological Characteristics of Oxidized Surfaces	317
15.6 Concluding Remarks	317
References	318
Section Six Nanoceramic Composites	
16. Overview: Relevance, Characteristics, and Applications of Nanostructured Ceramics	323
16.1 Introduction	323
16.2 Problems Associated with Synthesis of Nanosized Powders	326
16.2.1 Methods of Synthesis of Nanoscaled Ceramic Powders	326
16.2.2 Challenges Posed by the Typical Properties of Nanoscaled Powders	327
16.3 Challenges Faced during Processing	328
16.3.1 Problems Arising due to Fine Powders	328
16.3.2 Challenges Faced due to Agglomerated Powders	329
16.4 Processing of Bulk Nanocrystalline Ceramics	330
16.4.1 Processes Used for Developing Bulk Nanocrystalline Ceramics	330
16.4.2 Mechanisms Leading to Enhanced Sintering Kinetics on Pressure Application	331
16.5 Mechanical Properties of Bulk Ceramic Nanomaterials	332
16.5.1 Mechanical Properties	332
16.5.1.1 Hardness and Yield Strength	332
16.5.1.2 Fracture Strength and Fracture Toughness	335
16.5.1.3 Superplasticity	338

16.6 Applications of Nanoceramics 339
16.7 Conclusion and Outlook 341
References 343

17. Oxide Nanoceramic Composites 347

17.1 Overview 347
17.2 Al₂O₃-Based Nanocomposites 349
17.3 ZrO₂-Based Nanocomposites 355
17.4 Case Study 356
17.4.1 Yttria-Stabilized Tetragonal Zirconia Polycrystal Nanoceramics 356
17.4.2 ZrO₂-ZrB₂ Nanoceramic Composites 357

References 363

18. Microstructure Development and Properties of Non-Oxide Ceramic Nanocomposites 366

18.1 Nanocomposites Based on Si₃N₄ 366
18.2 Other Advanced Nanocomposites 371
18.2.1 Mullite-SiC 371
18.2.2 Yttrium Aluminum Garnet-SiC 371
18.2.3 SiC-TiC 371
18.2.4 Hydroxyapatite-ZrO₂ Nanobiocomposites 371
18.2.5 Stress-Sensing Nanocomposites 372
18.3 WC-Based Nanocomposites 372
18.3.1 Background 372
18.3.2 WC-ZrO₂ Nanoceramic Composites 375
18.3.3 WC-ZrO₂-Co Nanocomposites 380
18.3.4 Toughness of WC-ZrO₂-Based Nanoceramic Composites 384
18.3.5 Comparison with Other Ceramic Nanocomposites 385

References 387

Section Seven: Bioceramics and Biocomposites

19. Overview: Introduction to Biomaterials 393

19.1 Introduction 393
19.2 Hard Tissues 394
19.3 Some Useful Definitions and Their Implications 395
19.3.1 Biomaterial 395
19.3.2 Biocompatibility 397
19.3.3 Host Response 397

19.4	Cell–Material Interaction	398
19.5	Bacterial Infection and Biofilm Formation	400
19.6	Different Factors Influencing Bacterial Adhesion	402
19.6.1	Material Factors	404
19.6.2	Bacteria-Related Factors	405
19.6.3	External Factors	406
19.7	Experimental Evaluation of Biocompatibility	406
19.8	Overview of Properties of Some Biomaterials	413
19.8.1	Coating on Metals	413
19.8.2	Glass-Ceramics-Based Biomaterials	417
19.9	Outlook	418
	References	419

20. Calcium Phosphate-Based Bioceramic Composites **422**

20.1	Introduction	422
20.2	Bioinert Ceramics	424
20.3	Calcium Phosphate-Based Biomaterials	425
20.4	Calcium Phosphate–Mullite Composites	428
20.4.1	Mechanical Properties	430
20.4.2	Biocompatibility (<i>In Vitro</i> and <i>In Vivo</i>)	431
20.5	Hydroxyapatite–Ti System	434
20.6	Enhancement of Antimicrobial Properties of Hydroxyapatite	434
20.6.1	Hydroxyapatite–Ag System	437
20.6.2	Hydroxyapatite–ZnO System	439
	References	443

21. Tribological Properties of Ceramic Biocomposites **448**

21.1	Introduction	448
21.2	Tribology of Ceramic Biocomposites	449
21.3	Tribological Properties of Mullite-Reinforced Hydroxyapatite	450
21.3.1	Materials and Experiments	451
21.3.2	Effect of Lubrication on the Wear Resistance of Mullite-Reinforced Hydroxyapatite	451
21.3.3	Surface Topography of Mullite-Reinforced Hydroxyapatite after Fretting Wear	454
21.4	Tribological Properties of Plasma-Sprayed Hydroxyapatite Reinforced with Carbon Nanotubes	454
21.4.1	Bulk Wear Resistance of Hydroxyapatite Reinforced with Carbon Nanotubes	454

xvi Contents

- 21.4.2 Nanomechanical Properties of Hydroxyapatite Reinforced with Carbon
 Nanotubes 457
- 21.4.3 Nanoscratching of Hydroxyapatite Reinforced with Carbon
 Nanotubes 461

- 21.5 Laser Surface Treatment of Calcium Phosphate Biocomposites 461
- References 470

- Index** 472
