Contents

1	Introduction to Wind Turbine Technology	1
1.1	How Much Energy is in the Wind?	1
1.2	Examples of Wind Turbines	3
1.3	Wind Turbine Noise.	6
1.4	Turbine Operating Parameters	8
1.5	The Power Curve and the Performance Curve	10
1.6	The Variation in Wind Speed and Power Output with Height.	14
1.7	Turbulence and Wind Statistics	15
1.8	The Electrical and Mechanical Layout of Wind Turbines	17
1.9	The Size Dependence of Turbine Parameters.	22
	1.9.1 Further Reading	24
	1.9.2 Exercises.	25
	References	28
2	Control Volume Analysis for Wind Turbines.	31
2.1	Introduction	31
2.2	The Control Volume.	31
2.3	Conservation of Mass	32
2.4	Conservation of Momentum.	34
2.5	Conservation of Angular Momentum	35
2.6	Conservation of Energy.	35
2.7	Turbine Operating Parameters and Optimum Performance. . . .	36
	2.7.1 Exercises.	39
	References	40
3	Blade Element Theory for Wind Turbines.	41
3.1	Introduction	41
3.2	Some Assumptions of Blade Element Theory	42

3.3	The Conservation Equations for Annular Streamtubes	42
3.3.1	Conservation of Mass	43
3.3.2	Conservation of Momentum	43
3.3.3	Conservation of Angular Momentum	44
3.4	The Forces Acting on a Blade Element	44
3.5	Combining the Equations for the Streamtube and the Blade Element	47
3.6	Matlab Programs for Blade Element Analysis	47
3.7	Some Consequences of the Blade Element Equations	54
3.7.1	Exercises	54
	References	55
4	Aerofoils: Lift, Drag, and Circulation	57
4.1	Introduction	57
4.2	Geometry and Definition of Aerofoils	57
4.3	Aerofoil Lift and Drag	59
4.4	Aerofoil Lift and Drag at High Angles of Attack	64
4.5	The Circulation	66
4.6	Further Discussion on Reynolds Number, High Incidence, and Aspect Ratio	69
4.6.1	Further Reading	72
4.6.2	Exercises	73
	References	74
5	Blade Element Calculations	77
5.1	Introduction	77
5.2	Altering the Programs from Chap. 3	78
5.3	Running the Programs	85
5.4	Changing the Aerofoil	92
5.5	Maximising Power Extraction	93
5.5.1	Further Reading	98
5.5.2	Exercises	98
	References	99
6	Starting and Low Wind Speed Performance	101
6.1	Introduction	101
6.2	Estimating the Starting Torque	105
6.3	Analysis of Starting	108
6.4	Estimating the Rotor Inertia	111
6.5	Matlab Programs for Starting	112
6.5.1	Exercises	116
	References	117

7	Blade Design, Manufacture, and Testing	119
	7.1 Introduction	119
	7.2 Optimisation Method	119
	7.3 Matlab Programs for Optimisation	121
	7.4 Example Blade Design: A 750 W Turbine	126
	7.5 Blade Manufacture	134
	7.6 Blade Testing	139
	7.7 Forming the Rotor	141
	7.7.1 Exercises	142
	References	143
8	The Unsteady Aerodynamics of Turbine Yaw and Over-Speed Protection	145
	8.1 Introduction	145
	8.2 Fundamentals of Tail Fin Aerodynamics	146
	8.3 Unsteady Aerodynamics of Tail Fins	149
	8.4 Planform Effects on Tail Fin Performance	155
	8.5 Rotor Effects on Yaw Performance	157
	8.6 High Yaw Rates	158
	8.7 Aerodynamic Over-speed Protection	159
	8.7.1 Furling	160
	8.7.2 Pitching	162
	8.7.3 Exercises	164
	References	166
9	Using the IEC Simple Load Model for Small Wind Turbines	169
	9.1 Introduction	169
	9.2 The Simple Load Model	171
	9.2.1 Load Case A: Normal Operation	173
	9.2.2 Load Case B: Yawing	174
	9.2.3 Load Case C: Yaw Error	175
	9.2.4 Load Case D: Maximum Thrust	176
	9.2.5 Load Case E: Maximum Rotational Speed	176
	9.2.6 Load Case F: Short at Load Connection	176
	9.2.7 Load Case G: Shutdown (Braking)	177
	9.2.8 Load Case H: Parked Wind Loading	177
	9.2.9 Load Case I: Parked Wind Loading, Maximum Exposure	179
	9.2.10 Load Case J: Transportation, Assembly, Maintenance and Repair	179
	9.3 Stress Calculations and Safety Factors	180
	9.3.1 Equivalent Component Stresses	180
	9.3.2 Partial Safety Factors	181

9.3.3	Ultimate Stress Analysis	181
9.3.4	Fatigue Failure Analysis	182
9.4	Simple Load Model Analysis of 500 W Turbine	183
9.4.1	Loads for Case A: Normal Operation	183
9.4.2	Loads for Case B: Yawing	184
9.4.3	Loads for Case C: Yaw Error	185
9.4.4	Loads for Case D: Maximum Thrust.	185
9.4.5	Loads for Case E: Maximum Rotational Speed	185
9.4.6	Loads for Case F: Short at Electrical Connection.	186
9.4.7	Loads for Case H: Parked Wind Loading	186
9.5	Equivalent Component Stresses and Ultimate Material Strengths	186
9.5.1	Equivalent Stress for Case A: Normal Operation	187
9.5.2	Equivalent Stress for Case B: Yawing	189
9.5.3	Equivalent Stress for Case C: Yaw Error	189
9.5.4	Equivalent Stress for Case D: Maximum Thrust.	189
9.5.5	Equivalent Stress for Case E: Maximum Rotational Speed	189
9.5.6	Equivalent Stress for Case F: Short at Electrical Connection	190
9.5.7	Equivalent Stress for Load Case H: Parked Wind Loading	190
9.6	Spreadsheet for the Simple Load Model	190
9.7	Further Test Requirements.	192
9.8	Final Remarks	194
9.8.1	Further Reading	196
	References	198
10	Tower Design and Manufacture	199
10.1	Introduction	199
10.2	Monopole Towers.	201
10.3	Optimisation of Monopole Towers.	212
10.4	Lattice Towers	216
10.5	Guyed Towers	221
10.5.1	Exercises.	222
	References	224
11	Generator and Electrical System.	227
11.1	Introduction	227
11.2	Generators for Small Turbines	228
11.3	Gearboxes.	233
11.4	Rectifiers, Inverters, and Basic Control	234
11.5	System Protection.	240

11.6	Manual Shutdown and Condition Monitoring	245
11.7	Electrical Wiring	246
11.8	Lightning Protection	247
11.8.1	Further Reading	249
11.8.2	Exercises	249
	References	249
12	Site Assessment and Installation	251
12.1	Introduction	251
12.2	Site Assessment.	252
12.3	Optimum Tower Height	255
12.4	Tower Raising and Lowering.	259
12.4.1	Exercises	262
	References	263
	Index	265
