I Prepare for Red Hat Hands-on Certifications	I
The RHCSA and RHCE Exams	5
The Exam Experience	5
The RHCSA Exam	6
The RHCE Exam	7
If You're Studying "Just" for the RHCSA Exam	7
Evolving Requirements	7
Basic Hardware Requirements	8
Hardware Compatibility	8
Architectures	9
RAM Requirements	10
Hard Drive Options	11
Networking	12
Virtual Machine Options	12
Get Red Hat Enterprise Linux	13
Purchase a Subscription	14
Get an Evaluation Copy	14
Third-Party Rebuilds	14
Check the Download	15
Installation Requirements	16
You Won't Start from Scratch	17
The Advantages of Network Installation	17
Red Hat and Virtual Machines	17
Virtual and Physical Systems	18
A Pre-installed Environment for Practice Labs	18
System Roles	19

Installation Options	20
Boot Media	21
CD/DVD or Boot USB Starts Installation	22
Basic Installation Steps	23
The Installation Perspective on Partitions	31
Partition Creation Exercises	35
Exercise 1-1: Partitioning During Installation	37
Configure the Bootloader	39
Wow, Look at All That Software!	40
Baseline Packages	42
Package Groups	43
On Reboot	45
System Setup Options	47
The First Boot Process	47
Default Security Settings	50
Special Setup Options for Virtual Machines	51
Configure Default File Sharing Services	51
Mount and Copy the Installation DVD	52
Set Up a Default Configuration Apache Server	53
Exercise 1-2: Configure Apache as an Installation Server ..	55
Share Copied Files via FTP Server	56
✓ Two-Minute Drill	59
Q&A Self Test	61
Lab Questions	62
Self Test Answers	65
Lab Answers	66

2 Virtual Machines and Automated Installations 69

Configure KVM for Red Hat	70
Why Virtual Machines	72
If You Have to Install KVM	72
The Right KVM Modules	74
Configure the Virtual Machine Manager	75
Exercise 2-1: Create a Second Virtual Network	78
Configure a Virtual Machine on KVM	82
Configure a Virtual Machine on KVM	83

Exercise 2-2: Add Virtual Hard Drives	88
KVM Configuration Files	90
Control Virtual Machines from the Command Line	90
Automated Installation Options	96
Kickstart Concepts	97
Set Up Local Access to Kickstart	97
Set Up Network Access to Kickstart	99
Sample Kickstart File	100
Exercise 2-3: Create and Use a Sample Kickstart File	105
The Kickstart Configurator	107
Administration with the Secure Shell	112
Configure an SSH Client	112
Command Line Access	113
More SSH Command Line Tools	114
Graphical Secure Shell Access	115
Consider Adding These Command Line Tools	116
Checking Ports with telnet	116
Checking Ports with nmap	117
Configure an E-Mail Client	118
The Use of Text and Graphical Browsers	119
Using lftp to Access URLs	121
✓ Two-Minute Drill	124
Q&A Self Test	126
Lab Questions	127
Self Test Answers	130
Lab Answers	131

3 Fundamental Command Line Skills 135

Shells	139
Other Shells	139
Terminal Consoles	140
GUI Shell Interfaces	140
Differences Between Regular and Administrative Users	141
Text Streams and Command Redirection	142
Standard Command Line Tools	143
File and Directory Concepts	144
File Lists and ls	146

File Creation Commands	147
Wildcards	151
File Searches	151
The Management of Text Files	152
Commands to Read Text Streams	153
Commands to Process Text Streams	155
Edit Text Files at the Console	157
Exercise 3-1: Using vi to Create a New User	159
If You Don't Like vi	162
Edit Text Files in the GUI	163
Local Online Documentation	163
When You Need Help	164
A Variety of man Pages	165
The info Manuals	167
Detailed Documentation in /usr/share/doc	167
A Networking Primer	168
IP Version 4 Numbers and Address Classes	168
Basic IP Version 6 Addressing	169
How to Define a Network with IP Addresses	170
Tools, Commands, and Gateways	171
Network Configuration and Troubleshooting	177
Network Configuration Files	177
Network Configuration Tools	181
Exercise 3-2: Configure a Network Card	183
Hostname Configuration Files	187
Hostname Configuration Options	189
The Network Manager Applet	189
✓ Two-Minute Drill	192
Q&A Self Test	195
Lab Questions	196
Self Test Answers	197
Lab Answers	198

4	RHCSA-Level Security Options	201
Basic File Permissions		204
File Permissions and Ownership		204
Basic User and Group Concepts		206
The umask		207
Commands to Change Permissions and Ownership		208
Special File Attributes		211
Access Control Lists and More		212
Every File Already Has an ACL		212
Make a Filesystem ACL Friendly		213
Manage ACLs on a File		213
Configure a Directory for ACLs		216
Special Restrictions with ACLs		217
ACLs and Masks		218
Exercise 4-1: Use ACLs to Deny a User		218
NFS Shares and ACLs		219
Basic Firewall Control		221
Standard Ports		222
A Focus on iptables		223
Keep That Firewall in Operation		225
The Default RHEL 6 Firewall		225
The Firewall Configuration Tools		228
Exercise 4-2: Adjust Firewall Settings		234
A Security-Enhanced Linux Primer		235
Basic Features of SELinux		235
SELinux Status		235
SELinux Configuration at the Command Line		237
Configure Basic SELinux Settings		237
Configure Regular Users for SELinux		238
Manage SELinux Boolean Settings		240
List and Identify SELinux File Contexts		241
Restore SELinux File Contexts		242
Identify SELinux Process Contexts		242
Diagnose and Address SELinux Policy Violations		243
The GUI SELinux Management Tool		246
The SELinux Troubleshoot Browser		251
Exercise 4-3: Test an SELinux User Type		252

5 The Boot Process 263

The BIOS and the UEFI	265
Basic System Configuration	265
Startup Menus	266
Access to Linux Bootloaders	267
Bootloaders and GRUB	268
GRUB, the GRand Unified Bootloader	269
Boot into Different Runlevels	269
Exercise 5-1: Boot into a Different Runlevel	271
Modify the System Bootloader	272
More Options	275
GRUB Security and Password Protection	276
How to Update GRUB	276
Effects of GRUB Errors	277
The GRUB Command Line	278
Exercise 5-2: Using the GRUB Command Line	279
Create Your Own GRUB Configuration File	280
An Option to Booting from GRUB: Rescue Mode	281
Between GRUB and Login	285
Kernels and the Initial RAM Disk	285
The First Process, Runlevels, and Services	287
Switch Between Runlevels	288
Reboot and Shut Down a System Normally	288
Upstart Replaces SysVinit	289
Upstart Configuration Files	290
Terminals and Login Screens	293
Control by Runlevel	294
Functionality by Runlevel	294
The Innards of Runlevel Scripts	296
Service Configuration from the Command Line	296
The Text Console Service Configuration Tool	298
The GUI Service Configuration Tool	299

Network Configuration	300
Network Configuration Commands	301
Network Configuration Files	306
The /etc/sysconfig/network-scripts Files	307
Red Hat Configuration Tools	308
Exercise 5-3: Modify Network Interfaces with the Network Connections Tool	310
Configure Name Resolution	312
Exercise 5-4: Revise Network Interfaces on a Cloned System	313
Time Synchronization	315
An NTP Client	316
Date/Time Properties	316
✓ Two-Minute Drill	319
Q&A Self Test	321
Lab Questions	322
Self Test Answers	323

6 Linux Filesystem Administration 331

Storage Management and Partitions	333
Current System State	334
The fdisk Utility	335
The parted Utility	342
Graphical Options	348
Exercise 6-1: Work with fdisk and parted	350
Filesystem Formats	351
Standard Formatting Filesystems	352
Journaling Filesystems	352
Filesystem Format Commands	354
Swap Volumes	355
Filesystem Check Commands	355
Filesystem Conversions	356
Exercise 6-2: Format, Check, and Mount Different Filesystems	357

Basic Linux Filesystems and Directories	358
Separate Linux Filesystems	358
Directories That Can Be Mounted Separately	359
Logical Volume Management (LVM)	361
Definitions in LVM	361
Create a Physical Volume	362
Create a Volume Group	362
Create a Logical Volume	363
Make Use of a Logical Volume	363
More LVM Commands	363
Remove a Logical Volume	367
Resize Logical Volumes	367
The GUI Logical Volume Management Tool	368
Volume Encryption with the Linux Unified Key Setup	375
Passwords, Passphrases, and More	375
Encryption During Installation	376
Prepare and Initialize Encryption	377
Prepare the New Filesystem	378
Create the New Filesystem	378
Filesystem Management	381
The /etc/fstab File	382
Universally Unique Identifiers in /etc/fstab	384
The mount Command	384
More Filesystem Mount Options	386
Virtual Filesystems	387
Add Your Own Filesystems to /etc/fstab	387
Removable Media and /etc/fstab	388
Networked Filesystems	389
The Automounter	390
Mounting via the Automounter	390
Exercise 6-3: Configure the Automounter	396
✓ Two-Minute Drill	399

7	Package Management	409
The Red Hat Package Manager		411
What Is a Package?		411
What Is a Red Hat Package?		412
What Is a Repository?		412
Install an RPM Package		413
Uninstall an RPM Package		415
Install RPMs from Remote Systems		415
RPM Installation Security		416
Special RPM Procedures with the Kernel		418
More RPM Commands		420
Package Queries		421
Package Signatures		421
File Verification		422
Different Databases of Installed Packages		424
Dependencies and the yum Command		424
An Example of Dependency Hell		424
Relief from Dependency Hell		426
Basic yum Configuration		427
The Basic yum Configuration File: yum.conf		428
Configuration Files in the /etc/yum/pluginconf.d Directory		430
Configuration Files in the /etc/yum.repos.d Directory		431
Create Your Own /etc/yum.repos.d Configuration File		434
Exercise 7-1: Create a yum Repository from the		
RHEL 6 DVD		437
Third-Party Repositories		438
Basic yum Commands		439
Installation Mode		439
Security and yum		441
Updates and Security Fixes		442
Package Groups and yum		442
More yum Commands		444
More Package Management Tools		447
The GNOME Software Update Tool		448
Automated Updates		448
GNOME Add/Remove Software Tool		450

Exercise 7-2: Installing More with yum and the Add/Remove Software Tool	451
The Red Hat Network	453
✓ Two-Minute Drill	456

8 User Administration 465

User Account Management	467
Different Kinds of Users	467
The Shadow Password Suite	468
Command Line Tools	473
Exercise 8-1: Add a User with the Red Hat User Manager ..	476
Exercise 8-2: Real and Fake Shells	478
Delete a User	478
Modify an Account	479
More User and Group Management Commands	480
Administrative Control	483
The Ability to Log In as root	483
Exercise 8-3: Limit root Logins	483
The Ability to Log In	484
The Proper Use of the su Command	485
Limit Access to su	486
The Proper Use of the sg Command	486
Custom Administrators with the sudo Command	486
Other Administrative Users	488
User and Shell Configuration	488
Home Directories and /etc/skel	489
/etc/bashrc	490
/etc/profile and /etc/profile.d	490
/etc/profile.d	491
Exercise 8-4: Another Way to Secure a System	491
Shell Configuration Files in User Home Directories	492
Login, Logout, and User Switching	492

Users and Network Authentication	493
LDAP Client Configuration	494
The Name Service Switch File	496
Red Hat Network Authentication Tools	497
Special Groups	500
Standard and Red Hat Groups	501
Shared Directories	501
Exercise 8-5: Control Group Ownership with the SGID Bit ..	502

9 RHCSA-Level System Administration Tasks 515

Configure Access with VNC	517
Install and Configure a TigerVNC Server	518
The GNOME-Based vino Server	519
Install and Configure a VNC Client	521
Firewall Options	523
Confirm Access to a VNC Server	524
Route Through a Secure Shell	525
More VNC Configuration	526
A User VNC Configuration File	526
Elementary System Administration Commands	527
System Resource Management Commands	527
Archives and Compression	536
Control Services Through Daemons	538
Automate System Administration: cron and at	539
The System crontab and Components	539
Hourly cron Jobs	542
Regular Anacron Jobs	543
Setting Up cron for Users	544
Exercise 9-1: Create a cron Job	545
Running a Job with the at System	545
Secure cron and at	546
Local Log File Analysis	548
System Log Configuration File	548

	Log File Management	550
	A Variety of Log Files	551
	Service Specific Logs	552
	Exercise 9-2: Learn the Log Files	552

10 A Security Primer 563

The Layers of Linux Security	564
Bastion Systems	565
Best Defenses with Security Updates	566
Service-Specific Security	567
Host-Based Security	569
User-Based Security	569
Console Security	570
Recommendations from the U.S. National Security Agency ..	570
The PolicyKit	571
Firewalls and Network Address Translation	573
Definitions	573
The Structure of the iptables Command	574
The Default Firewall	577
Recommendations from the NSA	577
Make Sure the Firewall Is Running	580
IP Masquerading	580
IP Forwarding	582
The Red Hat Firewall Configuration Tool	583
The Extended Internet Super-Server	591
Generic xinetd Configuration	592
Service-Specific xinetd Configuration	593
Exercise 10-1: Configure xinetd	595
TCP Wrappers	596
Is a Service Protected by TCP Wrappers?	596
TCP Wrappers Configuration Files	597
Exercise 10-2: Configure TCP Wrappers	599

Pluggable Authentication Modules	600
Configuration Files	601
Control Flags	602
The Format of a PAM File	604
Exercise 10-3: Configure PAM	608
PAM and User-Based Security	608
Exercise 10-4: Use PAM to Limit User Access	610
Secure Files and More with GPG2	611
GPG2 Commands	612
Current GPG2 Configuration	612
GPG2 Encryption Options	613
Generate a GPG2 Key	613
Use a GPG2 Key to Secure a File	616

II System Services and SELinux 629

Red Hat System Configuration	631
Service Management	631
System Services	632
Bigger Picture Configuration Process	635
Available Configuration Tools	635
Security-Enhanced Linux	637
Options in the SELinux Booleans Directory	637
Service Categories of SELinux Booleans	639
Boolean Configuration with the SELinux Management Tool ..	639
Boolean Settings	640
SELinux File Contexts	645
Exercise 11-1: Configure a New Directory with Appropriate SELinux Contexts	647
The Secure Shell Server	648
SSH Configuration Commands	648
SSH Configuration Files	649
Basic Encrypted Communication	650

Set Up a Private/Public Pair for Key-Based Authentication	652
Configure an SSH Server	654
User-Based Security for SSH	662
Host-Based Security for SSH	662
A Security and Configuration Checklist	663
Installation of Server Services	663
Basic Configuration	667
Make Sure the Service Survives a Reboot	667
Review Access Through Layers of Security	668
Exercise 11-2: Review the Different Effects of iptables and TCP Wrappers	671

12 RHCE Administrative Tasks 681

Automate System Maintenance	683
Standard Administrative Scripts	683
Script Commands	685
Create Your Own Administrative Scripts	687
Exercise 12-1: Create a Script	688
Kernel Run-Time Parameters	689
How sysctl Works with /etc/sysctl.conf	689
Settings in the /etc/sysctl.conf File	690
Exercise 12-2: Disable Responses to the ping Command	691
Create an RPM Package	692
Source RPMs	693
The Directory Structure of an RPM Source	694
Create Custom Source Code	696
One More Prep Package	697
Create Your Own spec File	698
Build Your Own RPM	702
The Built RPMs	703
Special Network Options	704
Configure Special IP Routes	704

	Set Up a Kerberos Client	708
	Connect to Remote iSCSI Storage	712

13 Electronic Mail Servers 727

A Variety of E-Mail Agents	729
Definitions and Protocols	729
Relevant Mail Server Packages	730
Use alternatives to Select an E-Mail System	731
General User Security	732
Mail Logging	733
Common Security Issues	734
Testing an E-Mail Server	735
Exercise 13-1: Create Users Just for E-Mail	735
The Configuration of Postfix	736
Configuration Files	736
The main.cf Configuration File	740
The /etc/aliases Configuration File	743
The master.cf Configuration File	744
Test the Current Postfix Configuration	744
Configure Postfix Authentication	745
Configure Incoming E-Mail	746
Configure a Relay Through a Smart Host	746
Exercise 13-2: Switch Services	747
The Other SMTP Service: sendmail	747
The Basics of sendmail	748
Configuration Files	749
The sendmail.mc Macro File	750
The submit.mc Macro File	755
Configure sendmail to Accept E-Mail from Other Systems ..	756
Configure sendmail to Relay E-Mail to a Smart Host	757
Configure User- and Host-Based sendmail Security	757
Test the Current sendmail Configuration	757

14 The Apache Web Server **769**

The Apache Web Server	771
Apache 2.2	771
The LAMP Stack	772
Installation	772
Exercise 14-1: Install the Apache Server	773
The Apache Configuration Files	775
Analyze the Default Apache Configuration	775
The Main Apache Configuration File	776
Basic Apache Configuration for a Simple Web Server	779
Apache Log Files	780
Standard Apache Security Configuration	782
Ports and Firewalls	782
Apache and SELinux	782
Module Management	785
Security Within Apache	787
Exercise 14-2: The Apache Welcome and the noindex.html Story	790
Exercise 14-3: Create a List of Files	791
Host-Based Security	792
User-Based Security	793
Specialized Apache Directories	794
Control Through the .htaccess File	795
Password-Protected Access	795
Home Directory Access	796
Group-Managed Directories	798
Exercise 14-4: Password Protection for a Web Directory	800
Regular and Secure Virtual Hosts	801
The Standard Virtual Host	802
Secure Virtual Hosts	805
Create a New SSL Certificate	808

Test Pages	811
Syntax Checkers	812
Apache Troubleshooting	813
Exercise 14-5: Set Up a Virtual Web Server	814
Deploy a Basic CGI Application	815
Apache Configuration Changes for CGI Files	816
Set Up a Simple CGI Script	817
Connections to a Web Site	818
✓ Two-Minute Drill	821

15 The Samba File Server 831

Samba Services	833
Install Samba Services	834
Some Samba Background	834
Ports, Firewalls, and Samba	835
Configure SELinux Booleans for Samba	836
Configure SELinux File Types for Samba	837
Samba Daemons	838
Samba Server Global Configuration	838
Shared Samba Directories	847
Let Samba Join a Domain	851
The Samba User Database	852
Create a Public Share	853
Exercise 15-1: Configure a Samba Home Directory Share ..	854
The Samba Web Administration Tool	856
Test Changes to /etc/samba/smb.conf	862
Review User- and Host-Based Samba Security	863
Review Basic Samba Shares	865
Exercise 15-2: Configuring Samba with Shares	865
Samba as a Client	867
Command Line Tools	867
Mount Options	868
Automated Samba Mounts	868

Samba Troubleshooting	869
Samba Problem Identification	869
Local Log File Checks	870
Enable Remote Access	871
