

Richard Wentk

Xcode[®] 4

 Developer Reference

Contents

Preface	xvii
Acknowledgments	xix
Introduction	xx
Part I: Getting Started	1
Chapter 1: Introducing Xcode 4	3
Understanding the History of Mac Development Tools	4
Looking back at early IDEs	4
Developing Xcode	5
Understanding Xcode 4's Key Features	7
Moving to Xcode 4	9
Moving from the Xcode 3 to the Xcode 4 editor	10
Working with Interface Builder	16
Exploring code and file management	17
Exploring the debugger	19
Comparing iOS and OS X Development	20
Developing for OS X	20
Developing for iOS	22
OS X and iOS cross-development	23
Summary	24
Chapter 2: Getting and Installing Xcode	25
Selecting a Mac for Xcode	25
Choosing a processor	25
Selecting memory	26
Choosing a monitor	26
Working with disk storage	27
Choosing peripherals	28
Choosing supporting software	29
Signing Up for Development	30
Registering as a developer	31
Choosing a program	32
Accessing developer resources	36
Getting Started with Xcode	38
Installing Xcode	39
Creating and organizing project folders	42
Working with multiple versions of Xcode	44
Uninstalling Xcode	45
Summary	45

Chapter 3: Building Applications from Templates47

Getting Started with Templates	47
Building a project from an application template	50
Looking inside the Application templates	57
Using the OS X Application templates.....	58
Understanding the iOS Application templates.....	62
Introducing the Framework and Library templates	69
Introducing Plug-in templates	70
Changing the Standard Templates	71
Finding the template files	71
Customizing the template files.....	72
Summary.....	74

Chapter 4: Navigating the Xcode Interface75

Understanding the New Interface	75
Using the Navigation Area.....	77
The Project Navigator	77
The Symbol Navigator	79
The Search Navigator.....	82
The Issue Navigator and the Log Navigator	84
The Breakpoint Navigator and the Debug Navigator	88
Loading the navigators from menus and keyboard shortcuts.....	89
Using the Utility Area	90
Displaying file information	90
Using Quick Help	92
Using the library area	93
Working with the Editor Area	94
Getting started with code editing.....	95
Introducing build configurations	99
Summary.....	102

Chapter 5: Working with Files, Frameworks, and Classes103

Working with Files and Classes.....	103
Adding new files to a project.....	104
Adding a new class.....	111
Adding new resources	112
Adding miscellaneous other files from the templates	112
Deleting and renaming files	113
Importing existing files	115
Reimporting missing files.....	116
Working with Groups	117
Moving groups and files	117
Creating a new group	118
Organizing groups	119

Working with Frameworks	119
Using frameworks	120
Adding existing frameworks.....	121
Summary.....	122
Chapter 6: Using Documentation	123
Understanding the Apple Documentation	125
Comparing iOS and OS X and their different versions.....	125
Understanding resource types	126
Using topics.....	136
Using frameworks and layers	138
Searching the online documentation	139
Using the Xcode Documentation Viewer	140
Browsing the documentation	141
Searching the documentation	143
Using class references.....	145
Accessing documentation from code.....	146
Using Other Documentation	148
Summary.....	149
Chapter 7: Getting Started with Interface Builder	151
Understanding IB	151
Understanding nib files	152
Using nib files.....	153
Getting Started with IB.....	156
Introducing key features of the editor	156
Viewing the template nib files	158
Introducing the utility area.....	159
Creating a Simple iOS Project with IB	163
Adding objects to a view	165
Setting object contents	167
Linking objects to code.....	176
Understanding the IB object hierarchy	186
Comparing IB in Xcode 4 with Xcode 3.....	188
Summary.....	188
Chapter 8: Creating More Advanced Effects with Interface Builder	189
Using File's Owner and First Responder	189
Using File's Owner	189
Using First Responder.....	191
Subclassing Views and Other Objects	193
Adding a new subclass in Xcode	194
Adding code to the subclass	196
Assigning the subclass in IB.....	198
Working with more advanced subclassing techniques	200

Creating Custom Objects.....	202
Creating Views with Static Images	202
Creating a colored background.....	203
Importing an image file.....	204
Assigning an image file	207
Supporting Non-English Languages	209
Working with Advanced IB Techniques	212
Using tags	212
Sending messages between nibs.....	213
Converting iPhone projects to the iPad.....	214
Summary.....	217

Part II: Going Deeper219

Chapter 9: Saving Time in Xcode.....221

Using Code Folding.....	221
Editing Structure	223
Refactoring Code	225
Using the Refactor menu	226
Using the Edit All In Scope feature.....	228
Using Code Snippets.....	229
Inserting a snippet	229
Creating a new snippet.....	230
Jumping to a Definition.....	232
Summary.....	233

Chapter 10: Using the Organizer.....235

Working with Devices.....	235
Reviewing and managing profiles	237
Working with software images	239
Finding and installing iOS updates	240
Using device logs.....	241
Working with screenshots	244
Managing individual devices	246
Working with Projects and Archives	252
Managing Projects.....	252
Creating Archives.....	254
Summary.....	255

Chapter 11: Managing Certificates and Provisioning257

Understanding Provisioning.....	257
Creating and Installing User Certificates.....	262
Creating a CSR	263
Uploading the CSR to the Provisioning Portal.....	265

Creating and downloading a development certificate	268
Creating and downloading a distribution certificate	268
Installing the certificates	269
Provisioning Devices Manually	271
Creating an App ID	272
Registering devices manually	277
Creating a Development Provisioning Profile	280
Creating a Distribution Provisioning Profile	283
Automatic Provisioning	285
Creating an automatic device profile	285
Refreshing a profile	286
Moving between Macs	287
Provisioning for OS X Distribution	288
Understanding OS X provisioning	289
Provisioning in practice	290
Summary	297

Chapter 12: Working with Builds, Schemes, and Workspaces299

Getting Started with the Xcode Build System	299
Creating and organizing a workspace	301
Working with projects and targets	302
Understanding settings and options	304
Working with Schemes and Build Configurations	311
Getting started with build configurations	311
Understanding schemes	315
Editing schemes	316
Managing schemes, build actions, and targets	325
Summary	328

Chapter 13: Customizing Builds for Distribution and Advanced Development329

Introducing Common Basic Customizations	329
Creating a build for testing and debugging	330
Selecting the Base SDK	330
Setting the minimum supported OS version	331
Including a framework or library in a build	336
Selecting a compiler	337
Controlling warnings	338
Disabling iOS PNG compression	339
Changing an app's name before shipping	339
Creating App Store and Ad Hoc Builds	341
Building and packaging an iOS project for the App Store	341
Creating and distributing an iOS Ad Hoc build	357
Creating a Mac App Store submission	361

Working with Advanced Build Techniques	368
Understanding the build process	369
Introducing conditional compilation	370
Using conditional compilation	370
Understanding build phases and build rules	374
Working with build phases	374
Creating build rules	379
Summary	382

Chapter 14: Using Version Control383

Using Manual Version Control	383
Using Snapshots	385
Working with Source Control	388
Understanding Git	389
Using Git locally	390
Using Xcode with GitHub	405
Summary	414

Part III: Creating Fast and Reliable Code415

Chapter 15: Getting Started with Code Analysis and Debugging417

Checking and Analyzing Code	418
Checking code as you enter it	418
Using Fix-It code tips	419
Using the Static Code Analyzer	420
Getting Started with Debugging	422
Using the Console	423
Creating custom messages	424
Using custom messages	425
Understanding crashes	426
Viewing multiple logs	429
Working with Breakpoints	430
Working with simple breakpoints	430
Using the Variables View	434
Using advanced breakpoint features	441
Working with Command-Line Debugging	446
Summary	448

Chapter 16: Testing Code with Instruments449

Beginning with Instruments	450
Understanding Instruments	451
Exploring the Instruments UI	451

Getting Started with Instruments.....	458
Creating a leaky test app	459
Profiling an app with Instruments.....	460
Exploring the detail pane	475
Modifying instrument settings	476
Comparing different runs	479
Saving and loading runs	480
Working with Instruments and Templates	480
Understanding templates.....	480
Creating a template.....	480
Creating custom instruments	482
Working with UIAutomation	484
Setting up objects to support automation	485
Creating a test script.....	486
Getting started with Automation scripting.....	488
Summary.....	491
Chapter 17: Creating Unit Tests.....	493
Introducing Unit Testing.....	493
Understanding Unit Testing in Xcode	494
Creating a Simple Unit Test Project.....	496
Creating a new project that supports unit testing	497
Creating a class for testing.....	499
Creating a test case.....	502
Running tests	508
Summary.....	512
Part IV: Appendixes	513
Appendix A: Using Xcode's Tools and Utilities	515
Appendix B: Working with Other Editors	527
Appendix C: Understanding Compiler Technology.....	549
Index.....	557
