INTRODUCTION 1

1 PROPAGATION OF LIGHT IN UNGUIDED MEDIA 11

1.1 Introduction 11

1.2 Laser Beam Characteristics 12

1.2.1 Wavelength 12

1.2.2 Beam Profile and Modes 12

1.2.3 Beam Divergence 13

1.2.4 Rayleigh Range 16

1.2.5 Near-Field and Far-Field Distribution 17

1.2.6 Peak Wavelength 18

1.2.7 Degree of Coherence 18

1.2.8 Photometric Terms 19

1.2.9 Radiometric Terms 20

1.2.10 Beam Power and Intensity 21

1.2.11 The Decibel Unit 22

1.2.12 Laser Safety 23

1.2.13 Classification of Lasers 24

1.3 Atmospheric Layers 28

1.4 Atmospheric Effects on Optical Signals 30

1.4.1 Refractive Index of Air 31

1.4.2 Atmospheric Electricity 31

1.4.3 Atmospheric Tide 32

1.4.4 Definitions 32
1.4.4.1 Parts Per Million by Volume (PPMV) 32
1.4.4.2 Visibility 32
1.4.5 Absorption and Attenuation 32
1.4.6 Fog 35
1.4.7 Smog 37
1.4.8 Rain 37
1.4.9 Snow 38
1.4.10 Solar Interference 38
1.4.11 Scattering 39
1.4.11.1 Rayleigh Scattering 40
1.4.11.2 Mie Scattering 40
1.4.11.3 Geometric Scattering 41
1.4.12 Scintillation 42
1.4.13 Wind and Beam Wander 43
1.5 Coding for Atmospheric Optical Propagation 44
1.6 LIDAR 44
References 46

2 FSO TRANSCEIVER DESIGN 51
2.1 Introduction 51
2.2 Light Sources 52
2.2.1 Laser Classification Based on Reach 52
2.2.2 Parameters of Laser Sources 52
2.2.3 Light Emitting Diodes 53
2.2.4 LASERs 55
2.2.4.1 Fabry-Perot Semiconductor Lasers 57
2.2.4.2 Bragg Lasers 58
2.2.4.3 VCSEL Lasers 58
2.2.4.4 Titanium-doped Sapphire Lasers 60
2.2.4.5 Laser Comparison 60
2.3 Modulators 61
2.3.1 The Amplitude Modulation 61
2.4 Photodetectors and Receivers 63
2.4.1 Cut-off Wavelength 64
2.4.2 Photodetector Parameters 65
2.4.3 The PIN Photodiode 66
2.4.4 The APD Photodiode 67
2.4.5 Photodetector Figure of Merit 69

2.4.6 Silicon and InGaAS Photodetectors 69
2.4.6.1 *Silicon-based Photodetectors* 69
2.4.6.2 InGaAs-based Photodetectors 69
2.4.6.3 Ge-based Photodetectors 70
2.4.6.4 Selecting a Photodetector 70
2.5 Optical Amplification 70
2.5.1 Optical Amplifier Characteristics 71
2.5.2 Semiconductor Optical Amplifiers 71
2.5.3 Optical Fiber Amplifiers 73
2.5.4 Erbium Doped Fiber Amplifiers 73
2.6 Optical Signal to Noise Ratio 76
2.6.1 Signal Quality 76
2.6.2 *Signal Quality Monitoring Methods* 77
2.7 Acquisition, Pointing and Tracking 77
2.7.1 Acquisition 78
2.7.2 Pointing 80
2.7.3 Tracking 80
2.7.4 Corner Cube Reflectors 81
2.8 Adaptive and Active Optics 83
2.8.1 Methods for Adaptive Optics and Active Optics 84
2.8.2 The Reference Star 85
2.9 Laser Safety 86
2.10 Node Housing and Mounting 87
References 89

3 POINT-TO-POINT FSO SYSTEMS 91
3.1 Introduction 91
3.2 *Simple PtP Design* 93
3.2.1 Simple PtP Transceiver Design 94
3.2.2 Effect of Wind on LoS 95
3.2.3 Simple PtP Power Budget Estimation 95
3.2.4 Modeling Atmospheric Loss 98
3.3 Point-to-Point with Transponder Nodes 98
3.3.1 PtP Transceiver Design with Add-Drop 99
3.3.2 Power Budget for PtP with Add-Drop Nodes 100
3.4 Hybrid FSO and RF 101
3.5 FSO Point-to-Multipoint 102
3.6 FSO Point-to-Mobile 103
References 104

4 RING FSO SYSTEMS 106
4.1 Introduction 106
4.2 Ring Topologies and Service Protection 107
4.3 Ring Nodes with Add-Drop 109
4.4 Concatenated Rings 111
4.5 Ring to Network Connectivity 111
References 112

5 MESH FSO SYSTEMS 113
5.1 Introduction 113
5.2 FSO Nodes for Mesh Topology 114
5.2.1 Parameters Pertinent to FSO Mesh Topology 115
5.2.2 Mesh-FSO Node Design 117
5.2.3 Mesh-FSO Network Protection 118
5.2.4 Mesh-FSO Scalability 119
5.3 Hybrid Mesh-FSO with RF 120
5.4 Hybrid FSO-Fiber Networks 121
References 122

6 WDM MESH-FSO 124
6.1 Introduction 124
6.2 Light Attributes 125
6.3 Optical Media 125
6.3.1 Homogeneous and Heterogeneous Media 126
6.3.2 Isotropy and Anisotropy 126
6.3.3 Propagation of Light in Transparent Dielectric Medium 127
6.3.3.1 Phase Velocity 127
6.3.3.2 Group Velocity 127
6.4 Interaction of Light with Matter 127
6.4.1 Reflection and Refraction—Snell's Law 128
6.4.2 Polarization of Light and Matter 129
6.4.2.1 Polarization Vector 129
6.4.2.2 Transverse Wave 129
6.4.2.3 Circular, Elliptical and Linear Polarization 130
6.5 Medium Birefringence 133
6.6 DWDM and CWDM Optical Channels 134
6.6.1 The DWDM Grid 134
6.6.2 The CWDM Grid 134

6.7 WDM FSO Links 135
6.8 WDM Mesh FSO Networks 135
6.8.1 Mesh Network Engineering 135
6.8.2 Link Alignment 136
6.8.3 Mesh-Network Optimization 137
6.9 Service Protection in Mesh-FSO Networks 138
6.9.1 Link Degradation 139
6.9.2 Link Hard Failures 139
6.9.3 Degradation of a Cluster of Nodes 139
6.10 WDM Mesh-FSO versus EM-Wireless 140
References 141

7 INTEGRATING MESH-FSO WITH THE PUBLIC NETWORK 143
7.1 Introduction 143
7.2 The Ethernet Protocol 145
7.2.1 Gigabit Ethernet 146
7.2.2 10 Gigabit Ethernet 149
7.3 The TCP/IP Protocol 151
7.3.1 The Transmission Control Protocol 151
7.3.2 The User Datagram Protocol 152
7.3.3 The Real Time Transport Protocol 153
7.3.4 The Internet Protocol 153
7.4 The ATM Protocol 154
7.5 Wireless Protocols 158
7.5.1 Wi-Fi 159
7.5.2 WiMAX 160
7.5.3 Comparison of WiMAX with Wi-Fi 161
7.5.4 LTE 162
7.5.5 Comparison of LTE with WiMAX 163
7.6 The Next Generation SONET/SDH Protocol 164
7.6.1 The Legacy SONET/SDH 164
7.6.2 SONET Frames 165
7.6.3 Virtual Tributaries and Tributary Units 166
7.6.4 STS-N Frames 168
7.6.4.1 Concatenation 169
7.6.4.2 Scrambling 169
7.6.4.3 Maintenance 170
7.7 Next Generation SONET/SDH Networks 170
7.7.1 Next Generation Ring Networks 171

7.7.2 Next Generation Mesh Networks 171
7.7.2.1 Next Generation Mesh Networks: Protection 171
7.7.2.2 Next Generation Mesh Networks: Traffic Management 173
7.7.2.3 Next Generation Mesh Networks: Wavelength Management 173
7.7.2.4 Next Generation Mesh Networks: Network Management 174
7.7.2.5 Next Generation Mesh Networks: Service Restoration 174
7.8 Next Generation Protocols 175
7.8.1 Concatenation in NG-S 176
7.8.1.1 Contiguous Concatenation 176
7.8.1.2 Virtual Concatenation 176
7.9 The GMPLS Protocol 177
7.9.1 Before GMPLS: MPLS 177
7.9.2 The GMPLS 178
7.10 The GFP Protocol 179
7.10.1 GFP Header, Error Control and Synchronization 180
7.10.2 GFP Frame Structure 182
7.10.3 GFP-F and GFP-T Modes 182
7.11 The LCAS Protocol 184
7.12 The LAPS Protocol 184
7.13 Any Protocol over SONET/SDH 186
7.13.1 EXAMPLE 1: IP over LAPS over NG-S 186
7.13.2 EXAMPLE 2: Any Payload over LAPS over Next NG-S over WDM 187
References 188

8 FSO NETWORK SECURITY 191
8.1 Introduction 191
8.2 Cryptography 193
8.3 Security Levels 194
8.4 Security Layers 195
8.4.1 Security on the Information Layer 196
8.4.2 Security on the MAC/Network Layer 196
8.4.3 Security on the Link Layer 197
8.4.4 FSO-WLAN Security 197
8.5 FSO Inherent Security Features 198
8.5.1 FSO Beam Overspill 198

8.5.2 Beam Tapping 199
8.5.3 FSO Cable Tapping 200
8.6 Conclusion 200
References 200

9 FSO SPECIFIC APPLICATIONS 202
9.1 Introduction 202
9.2 FSO Networks for Highway Assisted Communications 203
9.3 Mesh-FSO in Disaster Areas 203
9.4 Visual Light Communication 204
9.5 Conclusion 207
References 207

Acronyms 209
