PIC PROJECTS FOR NON-PROGRAMMERS

Everything you need to know to get started

- Get up and running fast with a quick review of basics, then ten tried and tested projects
- No languages to learn: symbolic compiler allows you to create code via flowcharts to get projects started straight away
- Free Flowcode symbolic compiler

John Iovine

CONTENTS

Chapter 1 Flowcode Program Installation.....	1
Minimum System Requirements.....	1
Step 1.....	1
Step 2.....	1
Step 3.....	2
Step 4.....	3
Step 5.....	3
Step 6.....	4
Step 7.....	5
Step 8.....	6
Step 9.....	6
Chapter 2 Writing Our First Program “Wink”	9
Which Option to Take?.....	10
Writing the Flowchart.....	11
Option 1 Simulation	19
Running the Simulation	24
First a Little More on Simulations	24
Step Mode(s).....	25
Save Your File.....	27
Chapter 3 Uploading “Wink” Into Microcontroller(s).....	29
Real World Circuit (Option 2).....	33
PIC Programmers.....	36
Troubleshooting the Circuit	43
Real World Option 3	44
Preliminaries Finished	49
Chapter 4 Binary Number System — Outputting Data.....	51
Bits.....	51
Base 2	51
Bytes	52
Binary Addition	53
How Microcontrollers Can Read and Write Binary Numbers.....	53
Eight-Bit Bytes and Ports.....	54
Counting in Binary: Using LEDs to Represent Binary Numbers	54

Hardware	65
More on Binary	72
Programming Challenge	75
Chapter 5 Reading Data on Input Lines	77
Electrical Signals.....	77
How the Program Works	85
Alternatives	87
Chapter 6 Language Reference Guide.....	93
Input Icon.....	93
Output Icon.....	94
Delay Icon.....	95
Switch Icons	96
Connection Point 1	98
Part Two: The Jump Point	98
Loop Icon.....	98
Call Macro	100
Component Macros	102
Calculation Icon	103
String Icon	105
Interrupt Icon.....	108
Example of TMR0 Properties	110
Code Icon.....	112
Comment Icon.....	114
Chapter 7 Liquid Crystal Display (LCD).....	115
LCD Data Pins.....	116
Let's Start Programming	118
Troubleshooting the Circuit	126
To Create a New Macro.....	134
Creating Custom LCD Characters	143
Chapter 8 RS232 Serial Communication	151
Error Detection Algorithms	153
Parity	153
Baud Rates	153
Serial LCD.....	155
Serial LCD Power Supply	156

First Program PRG 8.1	158
First Serial Program.....	161
Second Program 8.2	163
Software Control.....	165
Creating a PC Link: PIC to PC Communication.....	168
HyperTerminal/PuTTY	174
PuTTY	177
Programming for PC Communication, PRG8.4	178
Establishing Two-Way Communication or Controlling the PIC from the PC	183
ECHO.....	183
The Flowchart.....	185
Controlling the PIC Microcontroller from the PC	187
UART Hardware	187
Expert Information and Notes for LCD Communication.....	187
Chapter 9 Analog-to-Digital Converters.....	189
A/D Resolution	191
Sampling Time.....	191
First Program.....	192
Potentiometer Function.....	193
Getting Practical.....	199
Simulate or Not Simulate.....	204
Real World Numbers	208
Enabling – Vref in Flowcode	210
Chapter 10 Power Control from DC Motor to AC Appliances	213
Controlling DC Power.....	213
Using a Transistor as a Switch	213
H-Bridge.....	217
Another H-Bridge	219
Motor Speed Control.....	220
Time Period and Frequency	221
Setting Up Our Parameters.....	226
Visual Speed Control.....	227
Controlling Mains Power Supply.....	228
Appendix A Installing ECIO Drivers.....	229
Index	237
