**GLOSSARY**

**xix**

<b>1</b>	<b>MICROBIAL ECOLOGY: BEGINNINGS AND THE ROAD FORWARD</b>	<b>1</b>
1.1	Central Themes	1
1.2	Introduction	2
	1.2.1 Roots of Microbial Ecology	3
	1.2.2 Current Perspectives	4
1.3	Timeline	5
1.4	Microfossils	7
1.5	Early Life	9
	1.5.1 The Precellular World	9
	1.5.2 The First Cell	10
	1.5.3 Development of Cellular Biology	11
	1.5.4 Evolution of Metabolic Pathways	12
1.6	Characteristics of Microbial Life	13
	1.6.1 Structure and Evolution of Cell Shape	13
	1.6.2 Metabolism and Use of Energy	16
	1.6.3 Growth, Reproduction, and Development	17
	1.6.4 Adaptations and Response to Stimuli	18
1.7	Classification and Taxonomy: The Species Concept	18
1.8	The Three Domains: Tree of Life	19
1.9	Relationship of Microbial Ecology to General Ecology	22
1.10	Changing Face of Microbial Ecology	23
	1.10.1 Change in Focus	23
	1.10.2 Diversity: From Culturing to Molecular Phylogeny	24
1.11	Summary	25
1.12	Delving Deeper: Critical Thinking Questions	26
	Bibliographic Material	26

<b>2</b>	<b>DIVERSITY OF MICROORGANISMS</b>	<b>29</b>
2.1	Central Themes	29
2.2	The Ubiquity of Microorganisms	29
2.3	The Amazing Diversity of Morphologies	30
	2.3.1 Comparison of the Three Domains	32
	2.3.2 What's in a Name: Prokaryotes	32
	2.3.3 Winogradsky's Experiments with Chemolithotrophs	32
2.4	Diversity of Bacterial Groups	33
	2.4.1 Expansion of the Number of Bacterial Phyla	33
	2.4.2 Bacterial Portrait Gallery: Processes and Players	35
2.5	Discovery of Archaea as a Separate Domain	38
2.6	Archaeal Diversity	39
	2.6.1 Archaeal Portrait Gallery	39
2.7	Archaea–Bacteria Differences	45
2.8	Eukarya: A Changing Picture of Phylogenetic Diversity	46
2.9	Protist Diversity	46
	2.9.1 Protist Gallery	49
2.10	Fungal Diversity	51
2.11	Algal Diversity	54
2.12	Viral Diversity	56
2.13	Summary	57
2.14	Delving Deeper: Critical Thinking Questions	58
	Bibliographic Material	58
<b>3</b>	<b>COMPLEXITY AND SIMPLICITY OF CELL SYSTEMS</b>	<b>61</b>
3.1	Central Themes	61
3.2	Introduction	62
3.3	Cell Parameters	63
	3.3.1 Life at the Lowest Level	64
	3.3.2 Large Microorganisms	66
3.4	Cell Movement and Chemotaxis	68
3.5	Structures of Sporulation	71
3.6	Nutrient Reserves and Storage Materials	74
3.7	Cell–Cell Associations	75
	3.7.1 Cell Attachment	76
	3.7.2 Biofilms	78
	3.7.3 Filamentous Growth	82
3.8	Cell Physiology and Metabolism	84
	3.8.1 Sensory Response	84
	3.8.2 Global Regulation	86

3.8.3	Internal Membranes in Bacteria	87
3.9	Energetics and Environment	88
3.9.1	Heterotrophs	88
3.9.2	Chemolithotrophs	91
3.9.3	Photophosphorylation	94
3.9.4	Bacteriorhodopsin Reaction	94
3.10	Bioelectrochemical Activities	97
3.11	Summary	99
3.12	Delving Deeper: Critical Thinking Questions	100
	Bibliographic Material	100

## **4 THE MICROBIAL HABITAT: AN ECOLOGICAL PERSPECTIVE 103**

4.1	Central Themes	103
4.2	Habitats: An Overview	104
4.2.1	The Niche	105
4.3	Aquatic Habitats	105
4.3.1	Freshwater	107
4.3.2	Marine Habitats	110
4.4	Soil Habitats	111
4.4.1	Microbial Food Webs in the Soil Habitat	112
4.5	Rock and Subsurface Habitats	117
4.5.1	Rock Varnish	117
4.5.2	Cave Habitats	119
4.5.3	Groundwater	120
4.5.4	Deep Subsurface	120
4.6	Atmospheric Habitats	121
4.6.1	Atmospheric Microbial Diversity: African Dust	121
4.6.2	Mysteries Remain	122
4.7	Population Ecology Across Habitats	124
4.7.1	Population Growth and Dynamics	124
4.7.2	Horizontal Gene Transfer	125
4.7.3	Biogeography versus Everything is Everywhere; the Environment Selects	126
4.8	Summary	128
4.9	Delving Deeper: Critical Thinking Questions	129
	Bibliographic Material	129

## **5 THE HOW OF MICROBIAL ECOLOGY STUDIES 131**

5.1	Central Themes	131
5.2	Introduction	132
5.3	Sampling and Sample Storage	134

5.4	Microscopy	135
	5.4.1 Gram Stains	135
	5.4.2 Direct Count Procedures	135
	5.4.3 Determining Actively Respiring Cells	136
	5.4.4 Fluorescent <i>in situ</i> Hybridization (FISH)	137
	5.4.5 Electron Microscopy	139
5.5	Cultivation of Microorganisms	139
	5.5.1 Microbial Respiration	144
	5.5.2 Microbial Biomass	144
	5.5.3 Measuring Carbon Substrate Utilization	145
5.6	Molecular Phylogenetics	146
5.7	Culturing Versus Molecular Techniques: Comparisons from Soil Studies	148
5.8	Community Fingerprinting Methods	149
	5.8.1 Denaturing Gradient Gel Electrophoresis	149
5.9	Metagenomics: A New Tool for Answering Community Ecology Questions	149
5.10	Environmental Proteomics	150
5.11	Stable-Isotope Studies	152
	5.11.1 Using Stable Isotopes: Movile Cave Food Web Case Study	153
5.12	Summary	154
5.13	Delving Deeper: Critical Thinking Questions	155
	Bibliographic Sources	155

## **6 MICROBE–MICROBE INTERACTIONS 159**

6.1	Central Themes	159
6.2	Introduction	160
6.3	Classification of Microbial Interactions	161
	6.3.1 Neutralism	162
	6.3.2 Commensalism	162
	6.3.3 Competition	162
	6.3.4 Parasitism	163
	6.3.5 Predation	164
	6.3.6 Antagonism (Amensalism)	164
	6.3.7 Syntrophism	167
6.4	Symbiotic Associations	168
	6.4.1 Diatoms	168
	6.4.2 Lichen	169
	6.4.3 Hatena	171
	6.4.4 Symbiosis between Bacteria and Protozoa	173

6.5	Fungus–Bacterium Symbiosis	174
6.6	Prokaryote–Prokaryote Interactions	174
	6.6.1 Two-Member Mutualism	174
	6.6.2 Examples of Parasites and Predators	174
6.7	Establishing a Symbiosis: The Nostoc–Geosiphon Association	176
6.8	Sexual Interactions	176
6.9	Summary	178
6.10	Delving Deeper: Critical Thinking Questions	180
	Bibliographic Material	181

## **7 INTERACTIONS BETWEEN MICROORGANISMS AND PLANTS 183**

7.1	Central Themes	183
7.2	Introduction	184
7.3	Symbiotic Associations with Cyanobacteria	186
7.4	Interactions in the Rhizosphere	187
7.5	Mycorrhizae	189
	7.5.1 Ectomycorrhizae	190
	7.5.2 Endomycorrhizae	193
	7.5.3 Other Mycorrhizal Associations	193
7.6	Nitrogen-Fixing Bacteria and Higher Plants	195
	7.6.1 Root Associations	195
	7.6.2 Stem Associations	202
7.7	Bacteria Supporting Plant Growth	202
	7.7.1 Production of Hormones	202
	7.7.2 Growth-Promoting Rhizobacteria	202
	7.7.3 Cactus Symbiosis	204
7.8	Leaf Surfaces and Microorganisms	205
7.9	Detrimental Activities of Microorganisms on Plants	206
	7.9.1 Fungal Parasites	206
	7.9.2 Bacterial Pathogens	207
	7.9.3 Rhizosphere Activities and Plant Diseases	209
7.10	<i>Fungi Promoting Increased Heat Tolerance in Plants</i>	211
7.11	Biocontrol of Pests and Pathogens	211
7.12	Summary	214
7.13	Delving Deeper: Critical Thinking Questions	214
	Bibliographic Material	215

## **8 INTERACTIONS BETWEEN MICROORGANISMS AND ANIMALS 217**

8.1	Central Themes	217
8.2	Introduction	218

8.3	Primary and Secondary Symbionts	222
8.4	Microbe–Animal Interactions: Parasitism	223
8.4.1	Parasitism Introduction	223
8.4.2	Nematode Parasitism of Insects	223
8.4.3	Effects of Multiple Parasitic Infections on Virulence	224
8.4.4	A Widespread Endosymbiosis: <i>Wolbachia</i> — Parasitism or Mutualism?	224
8.5	Microbe–Animal Interactions: Mutualism	225
8.5.1	Gut Animal–Microbe Mutualistic Interactions	225
8.5.2	Case Study: Unique Bacterial–Polychaete Endosymbiosis	227
8.5.3	Case Study: Beetles Cultivating Fungal Gardens	228
8.5.4	Mealybug Mutualisms	229
8.5.5	Luminescent Bacteria in Fish and Squid: Turning on the Lights	230
8.6	Lessons from the Deep: Evolutionary and Ecosystem Insights from Deep-Sea Vents Symbioses	230
8.7	Microbial–Vertebrate Interactions	233
8.7.1	Bacteria and Birds	235
8.7.2	Microorganisms and Humans	236
8.8	Grazing and Predation by Animals	236
8.9	Summary	239
8.10	Delving Deeper: Critical Thinking Questions	239
	Bibliographic Material	240

## **9 LIVING TOGETHER: MICROBIAL COMMUNITIES 243**

9.1	Central Themes	243
9.2	Introduction	244
9.2.1	Dominant Issues and Questions in Microbial Community Ecology	245
9.3	Metagenomics: A New Tool for Answering Community Ecology Questions	246
9.4	Biomats and Biofilms	247
9.4.1	Changes in Community Structure during Biofilm Succession	249
9.5	Formation of Organized Communities: Quorum Sensing	249
9.6	Colonization and Recolonization by Microorganisms	251
9.6.1	Case Study: Colonization of the Sterile Newborn Gut	252
9.6.2	Case Study: Undesirable Colonization—Factors in Disease	253
9.6.3	Case Study: Recolonization and Early Succession in Intertidal Sediments	253
9.7	Dispersal, Succession, and Stability	253

9.7.1	Case Study: Dispersal and Succession in the Oceans— Whale Falls as Dispersal Agents between Vents	254
9.7.2	Competition as a Structuring Force in Succession	254
9.7.3	Stability in Microcosm Studies	255
9.8	Species Diversity	256
9.8.1	Diversity Indices	257
9.8.2	Connections between Metazoans and Microorganisms: Co-occurrence Patterns	258
9.8.3	Disturbance and Diversity	258
9.9	Food Webs	259
9.9.1	Structure of Microbial Food Webs	260
9.9.2	Keystone Species Effects on Food Webs and Diversity	261
9.10	Primary Production and Energy Flow	261
9.10.1	Cycling of Nutrients	261
9.11	Microbial Community Examples	262
9.11.1	Plankton in Marine Ecosystems	263
9.11.2	Hot Springs	264
9.11.3	Wine and Cheese	266
9.12	Summary	269
9.13	Delving Deeper: Critical Thinking Questions	270
	Bibliographic Material	270

## **10 MICROBIAL PROCESSES CONTRIBUTING TO BIOGEOCHEMICAL CYCLES**

**273**

10.1	Central Themes	273
10.2	Introduction	274
10.3	Energy Flow	276
10.4	Oxygen and Carbon Cycling	278
10.5	Nitrogen Cycling	281
10.5.1	Nitrogen Fixation	282
10.5.2	Nitrogen Assimilation	283
10.5.3	Nitrification	283
10.5.4	Denitrification	284
10.6	Sulfur Cycling	284
10.6.1	Organic Sulfur Metabolism	285
10.6.2	Inorganic Sulfur Metabolism	285
10.7	Phosphorus Cycling	286
10.8	Iron Cycling	287
10.8.1	Siderophores	288
10.8.2	Ferritin and Magnetosomes	289

10.9	Cycling of Manganese and Selenium	290
10.10	Cycling of Hydrogen	293
10.11	Transformation of Mercury	294
10.12	Closed Systems	295
10.13	Summary	296
10.14	Delving Deeper: Critical Thinking Questions	297
	Bibliographic Material	297
<b>11</b>	<b>MICROBES AT WORK IN NATURE: BIOMINERALIZATION AND MICROBIAL WEATHERING</b>	<b>299</b>
11.1	Central Themes	299
11.2	Introduction	300
	11.2.1 Passive versus Active Biomineralization	302
11.3	Cell Characteristics and Metal Binding	303
	11.3.1 Passive Metal Adsorption	303
	11.3.2 Active Metal Adsorption	303
11.4	Energy Flow: Shuffling Electrons; Redox Reactions	304
11.5	Dissolution Versus Precipitation	305
11.6	Formation of Ores and Minerals	306
	11.6.1 Biomining	307
	11.6.2 Recovery of Petroleum	307
	11.6.3 Sulfuric Acid–Driven Speleogenesis	310
11.7	Microbial Participation in Silicification	312
	11.7.1 Silica Formation in Diatoms, Radiolarians, and Sponges	312
	11.7.2 Geysers	313
11.8	Biomineralization of Ferromanganese Deposits	314
	11.8.1 Magnetite Formation	314
	11.8.2 Rock Varnish	315
11.9	Microbial Carbonate Microbialites	317
11.10	Stromatolites	319
	11.10.1 Thrombolites	320
	11.10.2 Travertines and Tufas	321
	11.10.3 Coccolithophores and Foraminifera: Biologically Controlled Mineralization	323
11.11	Summary	324
11.12	Delving Deeper: Critical Thinking Questions	324
	Bibliographic Material	325
<b>12</b>	<b>DECOMPOSITION OF NATURAL COMPOUNDS</b>	<b>327</b>
12.1	Central Themes	327
12.2	Introduction	328

12.3	Decomposition of Wood	329
12.4	Digestion of Plant Cell Wall Structures	331
	12.4.1 Protopectinase and Pectinase Activities	333
	12.4.2 Microbial Decomposition of Lignin	333
	12.4.3 Degradation of Hemicellulose	334
	12.4.4 Enzymatic Degradation of Cellulose	335
12.5	Starch Hydrolysis	336
12.6	Inulin Hydrolysis	336
12.7	Decomposition of Diverse Biopolymers Including Animal Fibrous Proteins	337
	12.7.1 Chitin Digestion	337
	12.7.2 Decomposition of Keratin	337
	12.7.3 Fibroin Decomposition	338
	12.7.4 Collagen Breakdown	339
12.8	Ecology of Fermented Foods	341
12.9	Ecology of Bioenergy Production	343
	12.9.1 Alcohol Production	345
	12.9.2 H <sub>2</sub> Production	346
	12.9.3 Methane Production	347
	12.9.4 Biodiesel Production by Algae	348
12.10	Waste Treatment Systems	349
12.11	<i>Composting of Plant Organic Matter</i>	350
12.12	Impact of Microbial Degradation on Humans	352
12.13	Summary	354
12.14	Delving Deeper: Critical Thinking Questions	355
	Bibliographic Material	355

## **13 MICROBES AT WORK: BIOREMEDIATION** **359**

13.1	Central Themes	359
13.2	Introduction	360
13.3	Bioremediation as a Technology	361
13.4	Genetic Engineering	362
13.5	Design and Implementation of Bioremediation	362
	13.5.1 Bioreactors	362
	13.5.2 Biofarming	363
	13.5.3 Permeable Reactive Barriers	363
	13.5.4 Optimizing Bioremediation	363
13.6	Bioremediation of Organic Compounds	365
13.7	Degradation of Hydrocarbons	365
	13.7.1 Oil Spills	366
	13.7.2 Methane Utilization	366

13.7.3	Fuel Hydrocarbons	368
13.7.4	Polyaromatic Hydrocarbons	372
13.8	Degradation of Xenobiotics	373
13.8.1	Detoxification of Chlorinated Organic Compounds	375
13.8.2	Herbicides and Pesticides	376
13.8.3	Biodegradation of Explosives	377
13.8.4	Decomposition of Textile Dyes	378
13.9	Bioremediation with Inorganic Pollutants	380
13.9.1	Microbe–Toxic Metal Interactions	381
13.9.2	Detoxification of Selenium	384
13.9.3	Reactions with Arsenic	385
13.9.4	Bioremediation of Perchlorate Sites	387
13.9.5	Bioremediation of Nitrate Pollution	387
13.10	Summary	389
13.11	Delving Deeper: Critical Thinking Questions	390
	Bibliographic Material	390
