

MODELING and **SIMULATION**
IN BIOMEDICAL ENGINEERING

*Applications in
Cardiorespiratory Physiology*

Willem van Meurs

Contents

Foreword	xv
Preface	xvii
Acknowledgments	xix
1 Introduction	1
1.1 Signals and Systems	3
1.2 System Properties	5
SISO and MIMO	5
Continuous-Time and Discrete-Time	5
Static and Dynamic	6
Linear and Nonlinear	6
Time-Invariant and Time-Variant	6
1.3 Modeling and Simulation	7
1.4 Applications in Biomedical Engineering	10
1.5 Symbolic Notation	11
Review Problems	12
References and Further Reading	12

Part I Theory

2 Model Requirements	17
2.1 Qualitative Aspects	19
2.2 Quantitative Aspects	22
2.3 Implementation and Interfacing	24
Model Code Implementation	24
Interfacing	24
General Program Requirements	27
2.4 Target Response Data	27
Review Problems	28
References and Further Reading	29
3 Conceptual Models	31
3.1 Block Diagrams	34
3.2 Component Diagrams	39

3.3	General Observations on Conceptual Models . . .	42
	Review Problems	43
	References and Further Reading	43
4	Mathematical Models	45
4.1	A Model of Two Physical Systems	47
4.2	State Variable Models	51
4.3	Units and Numerical Values	56
4.4	Direct Representation of Fluid Circuits	58
4.5	Direct Representation of Gas Uptake and Distribution	63
4.6	Direct Representation of Simple Transfers in the Nervous System	70
4.7	Electrical Analogs and State Variable Models of Circuits	70
4.8	General Observations on Mathematical Models and Parameter Estimation	77
	Review Problems	79
	References and Further Reading	80
5	Software Implementation	81
5.1	Discretization of the Continuous-Time State Equation	83
5.2	Basic Algorithms for Implementation of the Discrete-Time State Variable Model	84
5.3	Model Code Verification	86
5.4	Connecting State Variable Models	87
	Review Problems	93
	References and Further Reading	94
6	Simulation Results and Model Validation	95
6.1	Definitions and Overall Procedure	97
6.2	Quantitative and Qualitative Methods for Establishing Accuracy	100
6.3	Range of Validity, Target Data, and Experimental Conditions	102
	Review Problems	103
	References and Further Reading	103

Part II Applications

7	A Model of the Cardiorespiratory System	107
7.1	Model Requirements	110

7.2	Conceptual Model	111
	Reference and Further Reading	113
8	Circulation	115
8.1	Model Requirements	117
8.2	Conceptual Models	119
8.3	Mathematical Models	122
	References and Further Reading	131
9	Respiration	133
9.1	Model Requirements	135
9.2	Multiple Models	137
9.3	Conceptual Models	141
9.4	Mathematical Models	145
	References and Further Reading	154
10	Physiologic Control	155
10.1	Model Requirements	158
10.2	Conceptual Models	160
10.3	Mathematical Models	162
	References and Further Reading	166

Part III **Advanced Topics**

11	Sensitivity Analysis	169
11.1	Method	171
11.2	Application to a Hemodynamic Model	172
	References and Further Reading	174
12	Design of Model-Driven Acute Care Training Simulators	175
12.1	Training Program Design	178
12.2	Simulator Design	180
12.3	Model Requirements	182
	References and Further Reading	185
	Index	187
