

Biology of *Hevea* Rubber

P.M. Priyadarshan

Contents

Preface	viii
1 Introduction	1
2 Genesis and Development	7
2.1 The Amazon River Basin	7
2.2 History of Domestication	10
3 Plant Structure and Ecophysiology	17
3.1 Reproductive Biology and Botany	17
3.1.1 Flowering	18
3.1.2 Fruit set	21
3.1.3 Post-fertilization events	23
3.1.4 Seed	24
3.1.5 Vegetative growth	25
3.1.6 Wintering	25
3.1.7 Root system	26
3.1.8 Juvenile and mature characteristics	27
3.1.9 Growth studies	27
3.1.10 Root heterogeneity and stock–scion interactions	29
3.2 Propagation	30
3.2.1 Polyclonal seed generation	31
3.2.2 Vegetative methods	31
3.3 Ecophysiology	40
3.3.1 Photosynthetic efficiency	41
3.3.2 Dry matter production and water use efficiency (WUE)	42

4	Latex Production, Diagnosis and Harvest	46
4.1	Latex	46
4.1.1	Rubber particles	47
4.1.2	Organic non-rubber constituents	49
4.1.3	Nucleic acids and polysomes	51
4.2	Latex Metabolism	52
4.2.1	Factors regulating metabolism of latex	54
4.3	Latex Vessels and Turgor Pressure	55
4.4	Anatomy and Latex Flow	58
4.5	Lutoids and Coagulation of Latex	61
4.5.1	Lutoid breakdown mechanisms	62
4.6	Harvest	63
4.6.1	Tapping notations	64
4.6.2	Tapping techniques	67
4.6.3	Factors affecting tapping efficiency	69
4.6.4	Yield stimulation	69
4.7	Tapping Panel Dryness (TPD)	71
5	Genetics and Breeding	74
5.1	Genetic Resources	74
5.1.1	<i>Hevea</i> as a species complex	74
5.1.2	Distribution of allied species	75
5.1.3	New genetic resources	78
5.2	Early History of Rubber Breeding	80
5.3	Evaluation of Clones	81
5.4	Recombination Breeding	81
5.5	Breeding Pattern	88
5.6	Selection	90
5.7	<i>Hevea</i> Clones	98
6	Biotechnology and Molecular Biology	101
6.1	<i>In Vitro</i> Culture	101
6.1.1	Anther culture	102
6.1.2	Somatic embryogenesis and meristem culture	103
6.1.3	Protoplast culture and embryo rescue	107
6.1.4	Direct gene transfer	108
6.2	Molecular Breeding	110
6.2.1	Non-expressed molecular genetic markers (MGMs)	111
6.2.2	Molecular genetic diversity	113
6.2.3	Paternity identification	117
6.2.4	Genetic mapping	117
6.2.5	Expressed genes in <i>Hevea</i>	121
7	Soil Tillage, Crop Establishment and Nutrition	126
7.1	Chemical Properties	128
7.2	Planting Density	129
7.3	Resource Capture in Intercropping Systems	131

8	Constraints – Environmental and Biological	134
8.1	Non-traditional Environments and Geoclimatic Stresses	134
8.2	<i>Hevea</i> Grown Under Marginal Conditions	135
8.2.1	Abiotic stress factors	140
8.2.2	Rubber-growing regions of India, Thailand and Vietnam	142
8.2.3	Rubber-growing regions of China	144
8.2.4	Conditions in West Africa	144
8.2.5	Situation in South America	147
8.3	Phenology Under Different Geoclimates	147
8.4	GE Interactions and Specific Adaptation	149
8.5	Biotic Stresses	153
8.5.1	South American leaf blight (SALB)	153
8.5.2	Abnormal leaf fall	158
8.5.3	Powdery mildew	159
8.5.4	<i>Corynespora</i> leaf disease	160
8.5.5	Shoot rot	162
8.5.6	<i>Gloeosporium</i> leaf disease	162
9	Ancillary Income Generation	164
9.1	<i>Hevea</i> Honey	164
9.2	<i>Hevea</i> Wood	165
9.2.1	Processing	167
9.2.2	Production and consumption	168
10	<i>Hevea</i> and Clean Development Management	169
	Glossary	172
	References	177
	Index	221
