Preface	vii
Glossary of Some Frequently Used Symbols and Abbreviations	1
1: Preliminaries	3 - 7
1.1 Introduction	3
1.2 Historical Perspective	4
1.3 Plan of the Book	5
2: The Classical Approach	9 - 61
2.1 Introduction	9
2.2 Some Definitions	9
2.2.1 Representation in set theory	12
2.3 The Classical Definition of Probability	15
2.4 Some Examples	17
2.5 Models in Statistical Mechanics	21
2.6 Some Theorems on Probability of Events	23
2.6.1 Theorems on probability of union of events	23
2.6.2 Conditional probability: Theorem of compound probability	30
2.6.3 Independence of events	33
2.6.4 Bayes theorem	37
2.6.5 Binomial probability	39
2.7 Limitations of Classical Definition	40
2.8 Statistical or Empirical Definition	41

2.9 Geometric Probability	42
2.10 Further Examples	46
2.11 Exercises and Complements	53
3: Axiomatic Approach	63 - 99
3.1 Introduction	63
3.2 Set Algebra, Fields, σ -Fields	63
3.2.1 Algebra of sets	63
3.2.2 Fields	67
3.2.3 σ -Field	71
3.3 Point Function, Set Function	76
3.3.1 Point function	76
3.3.2 Set function	76
3.3.3 Measure and measurable sets	77
3.3.4 Inverse function	79
3.4 Measurable Functions	83
3.5 Axiomatic Definition of Probability	87
3.5.1 Some simple properties	89
3.6 Conditional Probability Measure	92
3.7 Independent Trials and Product Space	95
3.8 Exercises and Complements	96
4: Random Variables and Probability Distributions	101 - 124
4.1 Introduction	101
4.2 Random Variables	101
4.3 Induced Probability Space	106
4.4 Probability Distribution Function of a Random Variable	107
4.5 Discrete and Continuous Random Variables	113
4.6 Independent Random Variables	117
4.7 Integral of a Borel Measurable Function (Random Variable)	118
4.7.1 The Lebesgue integral	118
4.7.2 The Lebesgue-Stieltjes integral	120
4.7.3 The Riemann-Stieltjes integral	120
4.8 Exercises and Complements	121

5: Expectation of a Discrete Random Variable	125 - 138
5.1 Introduction	125
5.2 Probability Distribution of a Discrete Random Variable	125
5.3 Expectation	126
5.4 Variance, Covariance, Correlation Coefficient	130
5.5 Exercises and Complements	137
6: Some Properties of a Probability Distribution on \mathcal{R}	139 - 186
6.1 Introduction	139
6.2 Expectation	139
6.2.1 Some properties of expectation	142
6.3 Moments	149
6.4 Some Moment Inequalities	154
6.5 Moments of a Symmetric Probability Distribution	160
6.6 Factorial Moments	161
6.7 Different Measures of Central Tendency	162
6.8 Measures of Dispersion	164
6.9 Measures of Skewness and Kurtosis	171
6.9.1 Measure of skewness	171
6.9.2 Measure of kurtosis	172
6.10 Some Probability Inequalities	172
6.11 Exercises and Complements	176
Appendix 6.A	185
7: Generating Functions	187 - 214
7.1 Introduction	187
7.2 Probability Generating Function	187
7.3 Moment Generating Function	192
7.4 Factorial Moment Generating Function	197
7.5 Cumulant Generating Function	197
7.6 Characteristic Function	199
7.7 Exercises and Complements	209
8: Some Discrete Distributions on \mathcal{R}^1	215 - 247
8.1 Introduction	215

8.2	The Discrete Uniform Distribution	215
8.3	The Bernoulli Distribution	216
8.4	The Binomial Distribution	217
8.4.1	The truncated binomial distribution	222
8.5	The Hypergeometric Distribution	223
8.5.1	The positive hypergeometric distribution	226
8.5.2	The negative hypergeometric distribution	226
8.6	The Poisson Distribution	226
8.6.1	The truncated Poisson distribution	234
8.7	The Geometric Distribution	234
8.8	The Negative Binomial Distribution	236
8.8.1	The truncated negative binomial distribution	239
8.9	The Power Series Distribution	239
8.9.1	Some special cases	241
8.10	Exercises and Complements	244
9:	Some Continuous Distributions on \mathcal{R}^1	249 - 280
9.1	Introduction	249
9.2	The Continuous Uniform Distribution	249
9.3	The Exponential Distribution	250
9.4	The Gamma Distribution and the Chi-Square Distribution	252
9.4.1	The gamma function	252
9.4.2	The gamma distribution	254
9.4.3	The chi-square distribution	255
9.5	The Beta Distribution	257
9.5.1	The beta function	257
9.5.2	The beta distribution	257
9.6	The Cauchy Distribution	260
9.7	The Normal Distribution	262
9.7.1	The truncated normal distribution	269
9.8	The Log-Normal Distribution	270
9.9	The Double-Exponential (Laplace) Distribution	273
9.10	The Pareto Distribution	274
9.11	The Weibull Distribution	275

9.12	The Extreme Value Distribution	276
9.13	The Logistic Distribution	276
9.14	Exercises and Complements	276
10:	Probability Distribution on \mathcal{R}^n	281 - 328
10.1	Introduction	281
10.2	Probability Distribution of a Random Vector	281
10.3	Expectation and Moments of a Random Vector	295
10.4	Multivariate Probability Generating Function	300
10.5	Multivariate Moment Generating Function	303
10.6	Multivariate Characteristic Function	305
10.7	Conditional Expectation, Variance, Regression	306
10.8	The Multinomial Distribution	311
10.9	The Bivariate Normal Distribution	314
10.10	Exercises and Complements	319
11:	Probability Distributions of Functions of Random Variables	329 - 358
11.1	Introduction	329
11.2	Functions of One Random Variable	329
11.3	Probability Integral Transformation	335
11.4	Functions of Two Random Variables	337
11.4.1	Using distribution functions	337
11.4.2	Transformation of variables	340
11.5	Functions of n Random Variables	344
11.6	Distributions of Maxima and Minima	347
11.7	Use of Moment Generating Function	350
11.8	Exercises and Complements	351
12:	Convergence of a Sequence of Random Variables	359 - 406
12.1	Introduction	359
12.2	Various Modes of Stochastic Convergence	359
12.2.1	Convergence in probability	360
12.2.2	Almost sure convergence	362
12.2.3	Convergence in the r th mean	365
12.2.4	Convergence in distribution	369

12.2.5 Complete convergence	377
12.2.6 Gradation of different modes of convergence	378
12.3 Weak Law of Large Numbers	379
12.3.1 Weierstrass approximation	383
12.4 Strong Law of Large Numbers	385
12.4.1 Kolmogorov's inequality and its ramifications	391
12.4.2 Different SLLN's	393
12.5 Central Limit Theorems	395
12.6 Exercises and Complements	402
13: Elements of Stochastic Process	407 - 445
13.1 Introduction	407
13.2 Preliminary Notions	407
13.3 Markov Chain	408
13.3.1 Classification of states	412
13.3.2 Limits of higher order transition probabilities	417
13.3.3 Irreducible chains	419
13.3.4 Martingales	423
13.4 Discrete Branching Process	424
13.5 Simple Random Walk	428
13.6 Continuous Time Markov Process	431
13.6.1 Poisson process	432
13.6.2 Birth process	433
13.6.3 Birth and death process	435
13.6.4 Normal process	438
13.7 Exercises and Complements	440
Appendix	447 - 459
A.1 Random Variables as Limits	447
A.1.1 Approximating simple functions for independent random variables	449
A.2 Lebesgue Integration of a Borel Measurable Function (a Random Variable)	449
A.2.1 Integration of a random variable	453

Contents

A.2.2 The Lebesgue-Stieltjes integral	456
A.2.3 The Riemann-Stieltjes integral	458

Bibliography	461 - 463
---------------------	------------------

Subject Index	465 - 471
----------------------	------------------

Statistical Tables	473 - 474
