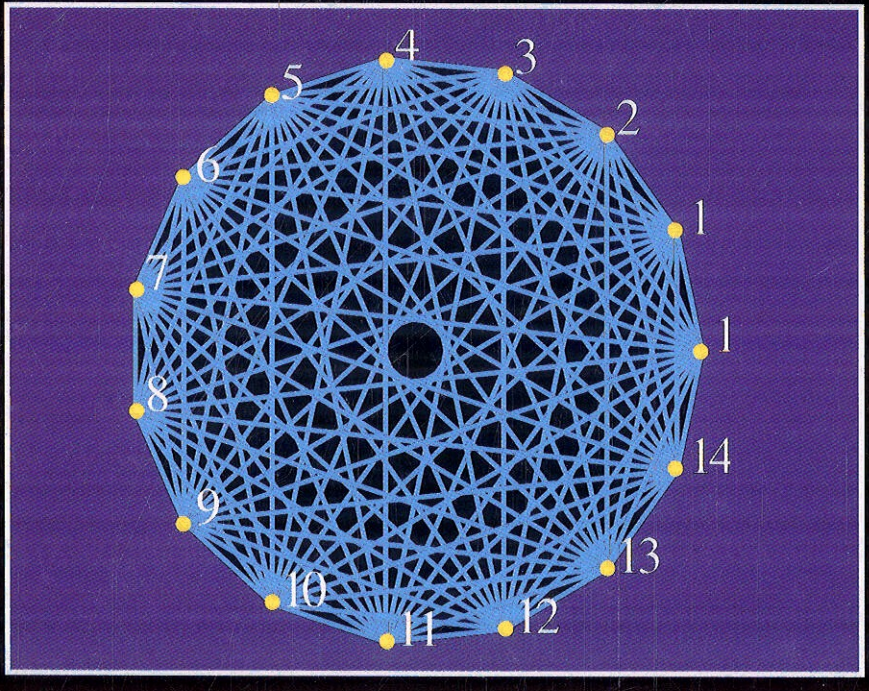
FRONTIERS IN THE STUDY OF CHAOTIC DYNAMICAL SYSTEMS WITH OPEN PROBLEMS

edited by
Elhadj Zeraoulia
Julien Clinton Sprott



World Scientific

Contents

Preface v

1. Problems with Lorenz's Modeling and the Algorithm of Chaos Doctrine 1
   S. OuYang and Y. Lin

2. Nonexistence of Chaotic Solutions of Nonlinear Differential Equations 31
   L. S. Yao

3. Some Open Problems in the Dynamics of Quadratic and Higher Degree Polynomial ODE Systems 43
   F. Zhang and J. Heidel

4. On Chaotic and Hyperchaotic Complex Nonlinear Dynamical Systems 59
   G. M. Mahmoud

5. On the Study of Chaotic Systems with Non-Horseshoe Template 85
   A. Ray, A. Roy Chowdhury and S. Basak

6. Instability of Solutions of Fourth and Fifth Order Delay Differential Equations 105
   C. Tunç

7. Some Conjectures About the Synchronizability and the Topology of Networks 117
A. Caneco, J. Leonel Rocha, C. Grácio and S. Fernandes

8. Wavelet Study of Dynamical Systems Using Partial Differential Equations 149
E. B. Postnikov

9. Combining the Dynamics of Discrete Dynamical Systems 155
J. S. Cánovas

10. Code Structure for Pairs of Linear Maps with Some Open Problems 175
P. Troshin

11. Recent Advances in Open Billiards with Some Open Problems 195
C. P. Dettmann

12. Open Problems in the Dynamics of the Expression of Gene Interaction Networks 219
L. S. Liebovitch and V. Naudot

13. How to Transform a Type of Chaos in Dynamical Systems? 231
E. Zeraoulia and J. C. Sprott
