|--------------------------------------------------------------------------------------------------------------------------------|------------|
| <b>Introduction</b>                                                                                                            | <b>vii</b> |
| <b>1 Differential equations with random right-hand sides and impulsive effects</b>                                             | <b>1</b>   |
| 1.1 An impulsive process as a solution of an impulsive system . . . .                                                          | 2          |
| 1.2 Dissipativity . . . . .                                                                                                    | 3          |
| 1.3 Stability and Lyapunov functions . . . . .                                                                                 | 10         |
| 1.4 Stability of systems with permanently acting random perturbations . . . . .                                                | 20         |
| 1.5 Solutions periodic in the restricted sense . . . . .                                                                       | 23         |
| 1.6 Periodic solutions of systems with small perturbations . . . . .                                                           | 28         |
| 1.7 Periodic solutions of linear impulsive systems . . . . .                                                                   | 34         |
| 1.8 Weakly nonlinear systems . . . . .                                                                                         | 40         |
| 1.9 Comments and References . . . . .                                                                                          | 49         |
| <b>2 Invariant sets for systems with random perturbations</b>                                                                  | <b>53</b>  |
| 2.1 Invariant sets for systems with random right-hand sides . . . .                                                            | 54         |
| 2.2 Invariant sets for stochastic Ito systems . . . . .                                                                        | 60         |
| 2.3 The behaviour of invariant sets under small perturbations . . . .                                                          | 64         |
| 2.4 A study of stability of an equilibrium via the reduction principle for systems with regular random perturbations . . . . . | 72         |
| 2.5 Stability of an equilibrium and the reduction principle for Ito type systems . . . . .                                     | 76         |
| 2.6 A study of stability of the invariant set via the reduction principle. Regular perturbations . . . . .                     | 84         |
| 2.7 Stability of invariant sets and the reduction principle for Ito type systems . . . . .                                     | 92         |
| 2.8 Comments and References . . . . .                                                                                          | 101        |

|          |                                                                                                                   |            |
|----------|-------------------------------------------------------------------------------------------------------------------|------------|
| <b>3</b> | <b>Linear and quasilinear stochastic Ito systems</b>                                                              | <b>105</b> |
| 3.1      | Mean square exponential dichotomy . . . . .                                                                       | 106        |
| 3.2      | A study of dichotomy in terms of quadratic forms . . . . .                                                        | 115        |
| 3.3      | Linear system solutions that are mean square bounded on the<br>semiaxis . . . . .                                 | 127        |
| 3.4      | Quasilinear systems . . . . .                                                                                     | 135        |
| 3.5      | Linear system solutions that are probability bounded on the<br>axis. A generalized notion of a solution . . . . . | 138        |
| 3.6      | Asymptotic equivalence of linear systems . . . . .                                                                | 148        |
| 3.7      | Conditions for asymptotic equivalence of nonlinear systems . .                                                    | 178        |
| 3.8      | Comments and References . . . . .                                                                                 | 185        |
| <b>4</b> | <b>Extensions of Ito systems on a torus</b>                                                                       | <b>189</b> |
| 4.1      | Stability of invariant tori . . . . .                                                                             | 190        |
| 4.2      | Random invariant tori for linear extensions . . . . .                                                             | 196        |
| 4.3      | Smoothness of invariant tori . . . . .                                                                            | 205        |
| 4.4      | Random invariant tori for nonlinear extensions . . . . .                                                          | 209        |
| 4.5      | An ergodic theorem for a class of stochastic systems having a<br>toroidal manifold . . . . .                      | 213        |
| 4.6      | Comments and References . . . . .                                                                                 | 222        |
| <b>5</b> | <b>The averaging method for equations with random<br/>perturbations</b>                                           | <b>225</b> |
| 5.1      | A substantiation of the averaging method for systems with<br>impulsive effect . . . . .                           | 226        |
| 5.2      | Asymptotics of normalized deviations of averaged solutions . .                                                    | 232        |
| 5.3      | Applications to the theory of nonlinear oscillations . . . . .                                                    | 247        |
| 5.4      | Averaging for systems with impulsive effects at random times .                                                    | 259        |
| 5.5      | The second theorem of M. M. Bogolyubov for systems with<br>regular random perturbations . . . . .                 | 267        |
| 5.6      | Averaging for stochastic Ito systems. An asymptotically finite<br>interval . . . . .                              | 276        |
| 5.7      | Averaging on the semiaxis . . . . .                                                                               | 282        |
| 5.8      | The averaging method and two-sided bounded solutions of Ito<br>systems . . . . .                                  | 285        |
| 5.9      | Comments and References . . . . .                                                                                 | 291        |
