<b>Chapter 1 An Introduction to Microwave Plasma Spectrometries</b>	<b>1</b>
1.1 Introduction	1
1.1.1 Historical Background	2
1.1.2 The Present Status of Microwave Plasma Spectrometry	4
1.2 Energy Flow between Microwave Plasma and Analyte	5
1.2.1 Microwave Power Absorption by the Plasma	5
1.2.2 Plasma-Sample Interaction	6
1.2.3 Analyte Excitation and Ionization	7
1.2.4 Summary: Energy Flow Diagram	8
1.3 Microwave Plasma Generation	9
1.3.1 Microwave Plasma Geometries (Configurations)	12
1.3.2 Power Density <i>versus</i> Plasma Stability	13
1.4 Basic Physical Characteristics of a Microwave Plasma Discharge	15
1.5 Spectroscopic Techniques Employing Microwave Induced Plasmas	17
References	18
 <b>Chapter 2 Instrumentation for Microwave Induced Plasma Optical Emission Spectrometry</b>	 <b>23</b>
2.1 The Components of a Microwave Induced Plasma Optical Emission Spectrometry System	23
2.2 Microwave Induced Plasma Torches	26
2.2.1 Torch Designs	27

2.2.2 The Importance of Vertical Positioning of a Microwave Induced Plasma Torch	30
2.3 Pros and Cons of the Microwave Induced Plasma Technique	30
References	34

### **Chapter 3 Principles of Operation and Construction of Microwave Plasma Cavities** **37**

3.1 E- and H-type Discharges at Different Gas Pressures and Frequencies	37
3.1.1 Choice of Operating Frequency	39
3.2 Some Basic Knowledge about Microwave Transmission Lines and Resonant Cavities	39
3.2.1 Requirements for an Ideal Microwave Cavity	44
3.2.2 What Makes a Good Microwave Plasma?	45
3.2.3 Sample Introduction into a Microwave Plasma	46
3.3 General Classification of Possible Microwave Plasma Sources	47
3.3.1 E-type Microwave Plasma Sources	47
3.3.2 H-type Microwave Plasma Sources	71
3.3.3 Hybrid EH-types of Microwave Plasma Sources	77
3.4 Making Annular-shaped Microwave Plasmas	79
3.4.1 Introducing the Symmetry of Microwave Energy Coupling and Making a Doughnut-shaped Plasma	79
3.4.2 Plasma-to-doughnut Shape Approaches	81
3.4.3 Making the Annular-shaped Microwave Plasma	81
3.5 The Concept of Microwave Cavities with Rotating Microwave Fields	83
3.5.1 Comments on Plasma Contamination in the New Capacitive Microwave Plasma Systems	87
3.6 Final Remarks: Thinking of the Future	89
References	90

### **Chapter 4 Microwave Safety** **94**

4.1 Introduction	94
4.2 Microwave Frequencies Permitted to be Used in Analytical Instrumentation	94

<i>Contents</i>	xi
4.3 Working with Microwave Plasmas	95
4.4 General Rules and Methods	96
References	97
<b>Chapter 5 Optical Emission Spectrometry with Microwave Plasmas</b>	<b>98</b>
5.1 Origins of Atomic Spectra	98
5.2 Basic Spectroscopy Practice	101
5.2.1 Spectral Line Intensity	101
5.2.2 Background Correction	101
5.2.3 Transient Signal Measurement	102
5.3 Instrumentation	103
5.3.1 Spectrometer Configurations	103
5.3.2 The Use of Echelle Optics to Observe the Emission from Microwave Plasmas	104
5.3.3 Interference Filters	105
5.3.4 Instruments Based on Fibre Optics	106
5.3.5 Detection Systems	106
5.4 The Microwave Induced Plasma Spectrum: General Description	108
5.5 Provisional Wavelength Tables Specific for Microwave Induced Plasma Spectra	111
References	118
<b>Chapter 6 Introduction of Gases and Vapours into Microwave Plasmas</b>	<b>121</b>
6.1 Introduction	121
6.2 Continuous Gas Introduction	124
6.3 Hydride Generation and Related Techniques	125
6.4 Generation of Other Gaseous Species	127
6.5 Microwave Induced Plasma Coupling with Gas Chromatographic Techniques	128
6.5.1 Atomic Emission Detector	130
6.6 Solid-phase Microextraction	133
6.7 Quantitative Analysis of Gases	134
References	135
<b>Chapter 7 Solution and Slurry Nebulization Coupling with Microwave Plasmas</b>	<b>141</b>
7.1 Nebulization Techniques Compatible with Microwave Plasmas	141
7.2 Plasma Tolerance to Solvent Loading	142
7.3 Nebulizer Designs	144
7.3.1 Pneumatic Nebulizers	144

7.3.2	Ultrasonic Nebulizers	146
7.3.3	Spray Chambers and Desolvation Systems	148
7.3.4	Flow Injection Analysis	151
7.4	Nebulization Methods Appropriate for Different Sample Classes	151
7.5	Microsampling Techniques for Liquids	154
7.6	Dual-flow Nebulization Techniques	155
7.7	Slurry Nebulization	156
7.8	Separation/Preconcentration Techniques and Solution Nebulization	157
	References	158
<b>Chapter 8</b>	<b>Solid Sampling Techniques for Microwave Plasmas</b>	<b>162</b>
8.1	Introduction	162
8.2	Methods that Convert Solid Samples into an Aerosol or Vapour	163
8.2.1	Spark and Arc Ablation	163
8.2.2	Laser Ablation	164
8.2.3	Electrothermal Vaporization	165
8.3	Discrete Powder Introduction	167
8.4	Continuous Powder Introduction	168
8.5	Separation Methods Coupled to Continuous Powder Introduction	171
8.6	Analysis of Powdered Samples by CPI-MWP-OES	172
	References	175
<b>Chapter 9</b>	<b>Optimization of the MWP-OES System</b>	<b>178</b>
9.1	What do we Optimize?	178
9.1.1	Sample Introduction System-related Parameters	178
9.1.2	Source-related Parameters	179
9.1.3	Spectrometer-related Parameters	180
9.2	Sequence for Optimizing the Parameters	180
9.3	Relation between Analytical Signal and Aerosol (Sample) Parameters	182
9.4	Optimizing Plasma Parameters for Trace Analysis	183
9.5	Instrument Tests	185
	References	186
<b>Chapter 10</b>	<b>Analytical Performance of MWP-OES</b>	<b>189</b>
10.1	Introduction	189
10.2	Interferences in MWP-OES	190

10.2.1	Non-spectral Interferences in Microwave Plasmas	191
10.3	Calibration Strategies	193
10.4	General Analytical Characteristics of MWP-OES	195
10.5	Comparison of Different MWP-based Techniques	196
10.6	Microwave Plasmas <i>versus</i> Other Plasma Sources	197
	References	199
<b>Chapter 11</b>	<b>Analytical Applications of MWP-OES</b>	<b>203</b>
11.1	Microwave Plasma Spectroscopic Techniques: Overview of Practical Uses	203
11.1.1	Types of Analyses	205
11.2	Selected Applications of MWP-OES in Environmental Analysis	207
11.3	Selected Applications of MWP-OES in Clinical Analysis	208
11.4	Selected Applications of MWP-OES in Industrial Analysis	209
11.5	Selected Applications of MWP-OES in Geological Analysis	212
11.6	Selected Applications of MIP-OES in Speciation Studies	212
	References	213
<b>Chapter 12</b>	<b>Non-emission Microwave Plasma Spectroscopic Techniques and Tandem Sources</b>	<b>222</b>
12.1	Microwave Plasma Atomic Absorption Spectrometry	222
12.1.1	Instrumental Setup	222
12.2	Microwave Plasma Atomic Fluorescence Spectrometry	225
12.3	Microwave Plasma Mass Spectrometry	227
12.4	Microwave Plasma Cavity Ringdown Spectroscopy	230
12.5	Tandem Sources and Miscellaneous	231
	References	232
<b>Chapter 13</b>	<b>The Future for Microwave Plasma Spectrometry</b>	<b>238</b>
<b>Appendix</b>		<b>240</b>
<b>Subject Index</b>		<b>243</b>
