

ENVIRONMENTAL CALCULATIONS

A MULTIMEDIA APPROACH

Robert G. Kunz

WILEY

Contents

Preface	xxi
----------------	------------

Acknowledgments	xxiii
------------------------	--------------

1. Introduction	1
------------------------	----------

1.1	Who, What, Why, and How of This Book	1
1.2	Potential Users	2
1.3	Arrangement	2
1.4	Truths and Myths About Environmental Control	3
1.5	Adequate Preparation Is the Key	4
1.6	A List of Do's	4
1.7	And At Least One Don't	5
1.8	Author's Supplemental Disclaimer	5
	References	5

2. Basic Concepts	6
--------------------------	----------

2.1	Basic Chemistry	6
2.1.1	The Atom	6
2.1.2	The Periodic Table	7
2.1.3	Valence and Balanced Chemical Equations	9
2.1.4	Summary of Basic Chemistry	13
2.2	The Ideal Gas	13
2.2.1	Dalton's Law	15
2.2.2	Amagat's Law	16
2.2.3	Example Problems for the Ideal Gas Law	16
2.3	Concentrations and Mass Flow Rates	19
2.3.1	Concentrations in Mass Per Unit Volume	19
2.3.2	Emission Factors in Mass Per Unit of Fuel Firing Rate	21
2.3.3	Higher and Lower Heating Values	22
2.3.4	Mass Flow Rates	24
2.4	Vapor Pressure	25
2.4.1	What It Is	25
2.4.2	How to Calculate	26
2.5	Henry's Law	31
2.5.1	Gases	31

2.5.2	Volatile Liquids	33	
2.5.3	Ionizing Materials: Ionic Equilibrium	34	
2.5.4	Henry's Law Constants for Ionizing Species	36	
2.6	Vapor–Liquid Equilibrium	41	
2.6.1	Raoult's Law	41	
2.6.2	Systems Where Raoult's Law Does Not Apply	46	
2.6.3	Azeotropic Systems	49	
2.6.4	Activity Coefficients Versus Mole Fraction Plots	52	
2.6.5	Henry's Law Constants from Vapor–Liquid Equilibrium Activity Coefficients	52	
2.6.6	Rigorous Vapor–Liquid Equilibria for the Air–Water System	58	
2.7	Energy Balances and Heat Transfer	60	
2.7.1	Addition or Subtraction of Energy with No Change of Phase	60	
2.7.2	Latent Heat	61	
2.7.3	Heat Transfer	62	
2.8	A Smattering of Statistics	72	
2.8.1	Characterizations of the Center of a Distribution	73	
2.8.2	Characterization of the Spread of a Distribution	74	
2.8.3	The Rolling Average	76	
2.8.4	Probability Density Functions: The Normal Distribution	77	
2.8.5	Test for a Normal Distribution	78	
2.8.6	The Log-Normal Distribution	80	
2.8.7	Other Statistical Applications	81	
	References	81	

3. Air Combustion

83

3.1	Introduction	83	
3.2	Combustion	83	
3.2.1	Combustion Inputs and Outputs	84	
3.3	Fuel	84	
3.3.1	Fuel Heating Values	85	
3.4	Air	87	
3.5	Water	91	
3.5.1	Estimation of Combustion Air Moisture	91	
3.6	Combustion Calculations from Basic Principles	98	
3.6.1	Pure O ₂ : Stoichiometric Case	98	
3.6.2	Pure O ₂ : Excess O ₂ Case	99	
3.6.3	Case Using Pure O ₂ to Obtain a Specified O ₂ Concentration in the Flue Gas	100	
3.6.4	Stoichiometric Case Using Dry Air	101	
3.6.5	Percent Excess Air Case Using Dry Air	101	
3.6.6	The Case of a Specific Excess O ₂ Concentration in the Flue Gas Using Dry Atmospheric Air	103	
3.6.7	Stoichiometric Case Using Moist Air	104	
3.6.8	Excess Air Case Using Moist Air	104	
3.6.9	The Case of a Specific Excess O ₂ in the Flue Gas	105	

3.7	Flue Gas	107
3.8	Combustion Calculations Based on EPA Method 19 F Factors	110
3.9	Combustion Problems: Major Species in the Flue Gas	115
3.9.1	Relationship Between Percent Excess Air and Percent O ₂ in the Flue Gas	131
3.10	Adiabatic Flame Temperature	131
3.11	Estimation of Pollutant Emissions	137
3.12	The Stack Test	166
3.12.1	Test Methods and Calculations	168
3.12.2	Air Infiltration	180
3.13	Continuous Emission Monitoring Systems	182
3.14	Miscellaneous Sources of Air Emissions	186
3.14.1	Fugitive Emissions	186
3.14.2	Cooling Towers	190
3.14.3	Other Sources of Fugitive Emissions	191
3.14.4	Organic Liquid Storage Tanks	192
3.14.5	Emergency Diesel Generator and Fuel Oil Tank	192
3.14.6	Organic Chemical Vent Stream	195
3.14.7	Monoethanolamine (MEA) Emissions	195
	References	202

4. Air Control Devices

207

4.1	Overview	207
4.2	Flares	207
4.2.1	Flare Operation	208
4.2.2	Flare Emissions	208
4.3	Selective Catalytic Reduction	211
4.3.1	SCR Equations	211
4.3.2	SCR Operation	212
4.4	Selective Noncatalytic Reduction	214
4.4.1	SNCR Design and Operation	215
4.4.2	SNCR Performance	215
4.4.3	SNCR plus SCR	217
4.5	Flue Gas Recirculation	218
4.5.1	FGR Performance	219
4.5.2	FGR Data Analysis	219
4.6	Water/Steam Injection into Combustion Gas Turbine	223
4.6.1	Emissions and Abatement	223
4.6.2	Permitting	224
4.7	Low-Temperature Oxidation (Ozone Reaction/Scrubbing)	226
4.7.1	Background	226
4.7.2	Process Description	227
4.7.3	Chemical Reactions	228
4.7.4	Ozone to NO _x Ratio	229
4.7.5	Possible Problem Areas	229
4.7.6	Demonstration on Natural-Gas Fired Boiler	229
4.8	Particulate Removal	232

4.9	Flue Gas Scrubbing	237
4.10	Atmospheric Dispersion	238
4.10.1	Atmospheric Conditions—Stability	239
4.10.2	Atmospheric Conditions—Wind Speed and Air Temperature	239
4.10.3	Characteristics of the Emission	239
4.10.4	Good Engineering Practice (GEP) Stack Height	240
4.10.5	Dispersion Modeling Calculations	241
4.10.6	Stack Draft	246
	References	247

5. Water/Wastewater Composition

252

5.1	Introduction	252
5.2	Concentrations Expressed as mg/L as CaCO ₃	252
5.2.1	Balancing a Typical Water Analysis	253
5.2.2	Calculation of Conductivity	257
5.3	Dissolved Oxygen	257
5.4	Nonspecific Indicators of Water Pollution	259
5.4.1	Biochemical Oxygen Demand	259
5.4.2	Chemical Oxygen Demand	260
5.4.3	Permanganate Oxygen Demand Test	260
5.4.4	Total Organic Carbon	261
5.5	BOD, COD, and TOC in Industrial Wastewater	262
5.6	Domestic Wastewater (Also known as Sewage)	268
5.6.1	Septic Tanks	268
5.7	Dissolved Oxygen Concentration in a Receiving Stream	269
5.8	Alkalinity	271
5.8.1	Indicators Used in Alkalinity Titrations	272
5.8.2	Alkalinity of Natural Waters	272
5.9	The Nitrogen Cycle	273
5.9.1	Kinetic Analysis of Organic Nitrogen Decomposition	274
5.9.2	Ammonia-Nitrogen	275
5.9.3	Ammonia Ionization	276
5.10	Chlorination/Dechlorination	277
5.10.1	Chlorine in Solution	278
5.10.2	Oxidizing Power of Chlorine-Containing Chemicals	280
5.10.3	Breakpoint Chlorination	281
5.10.4	Dechlorination	283
5.10.5	The Sulfurous Acid System	285
5.11	Petroleum Oil	288
5.12	Cooling Water Operations	291
5.13	Boiler Operations	291
5.13.1	Dissolved Solids Removal from Boiler Feedwater	292
5.13.2	Deaeration	292
5.13.3	Boiler Blowdown	293
5.13.4	Addition of Treatment Chemicals	293
5.13.5	Boiler Wastewater Composition	294
	References	300

6. Water/Wastewater Hydraulics**303**

6.1	Measurement of Effluent Flow	303
6.1.1	The Weir	303
6.1.2	Flumes	308
6.2	Flow in Rivers and Streams	313
6.2.1	Pitot Tube	314
6.2.2	Current Meter	314
6.2.3	Tracer Techniques	315
6.2.4	Calculation of Open-Channel Flow	318
6.3	Meeting Water Quality Limits	322
6.3.1	Low-Flow Conditions	322
6.3.2	Discharge Under No-Flow or Low-Flow Conditions	324
6.4	Groundwater Flow	324
6.5	Storm Water Calculations	326
6.5.1	The Rational Method	326
6.5.2	Coefficient	327
6.5.3	Intensity	328
6.5.4	Criteria for Storm Water Design	328
6.5.5	Time of Concentration	329
6.6	Back to the Manning Equation	331
6.6.1	Rectangular Channels	331
6.6.2	Circular Channels/Pipe	332
	References	337

7. Water/Wastewater Draining of Tanks**339**

7.1	Introduction	339
7.2	Time to Drain Tanks	340
7.2.1	Vertical Tank of Constant Cross Section	340
7.2.2	(Vertical) Cone-Shaped Tank	343
7.2.3	Spherical Tank	345
7.2.4	Spheroidal or Ellipsoidal Tank	348
7.2.5	Vertical Cylindrical Tank with Cone Bottom	349
7.2.6	Vertical Cylindrical Tank with Hemispherical Bottom	350
7.2.7	Vertical Cylindrical Tank with Ellipsoidal Bottom	351
7.2.8	Vertical Cylindrical Tank with Dished Bottom	352
7.2.9	Vertical Tank of Elliptical Cross Section with Ellipsoidal Bottom	354
7.2.10	Horizontal Cylindrical Tank with Flat Ends	354
7.2.11	Horizontal Cylindrical Tank with Hemispherical Ends	357
7.2.12	Horizontal Cylindrical Tank with Elliptical Ends	359
7.2.13	Horizontal Cylindrical Tank with Dished Ends	361
7.2.14	Horizontal Tank with Elliptical Cross Section and Flat Ends	364
7.2.15	Horizontal Tank of Elliptical Cross Section with Elliptical Ends	366
7.3	Trajectory of the Jet from a Leaking Tank	367
	References	374

8. Solid Waste

375

8.1	Introduction	375
8.2	Selected Waste Designations/Definitions	376
8.2.1	Coal Wastes	376
8.2.2	Construction/Demolition Waste/Debris	376
8.2.3	Garbage	377
8.2.4	Hazardous Waste	377
8.2.5	Hazardous Household Waste	378
8.2.6	Industrial (Solid) Waste	379
8.2.7	Infectious/Medical Waste	379
8.2.8	Liquid Waste	380
8.2.9	Municipal Solid Waste (MSW)	380
8.2.10	Nuclear/Radioactive Waste	381
8.2.11	Refuse/Rubbish/Trash	381
8.2.12	Residual Waste	382
8.2.13	Solid Waste	383
8.2.14	Special Waste	383
8.2.15	Toxic Waste	384
8.2.16	Universal Waste	385
8.2.17	Waste Oil	385
8.3	Waste Analysis	386
8.4	Calculations for Solid/Hazardous Waste Permitting	386
8.4.1	Conversion of Units	386
8.4.2	More Unit Conversions	387
8.4.3	Conversion of Volume to Weight	389
8.4.4	Sampling of Solid Waste	390
8.5	Waste Incineration	393
8.5.1	Principal Organic Hazardous Constituents	393
8.5.2	Significant Figures for DRE	398
8.5.3	DRE Determination for POHC via a Surrogate Compound	399
8.5.4	MSW Incineration with AP-42 Estimated Emissions	400
8.5.5	Wrap-Up of MSW Problem	412
	References	412

9. Noise

415

9.1	General	415
9.2	Sound Versus Noise	415
9.2.1	Sound Characteristics	416
9.3	Sound Properties	417
9.3.1	Loudness	417
9.3.2	Pitch	417
9.3.3	Timbre	418
9.4	Frequency Spectrum	418
9.5	The Octave	419
9.5.1	Octave Definition—the Musical Scale	419
9.5.2	Octave Band Analysis—Sound Meter	421
9.6	Combining Decibels	422
9.6.1	Decibel Addition	422

9.6.2	Averaging Decibels	423
9.6.3	Subtraction of Decibels	424
9.6.4	“Shortcut” Graphical Procedure	425
9.7	Composite Sound Level	428
9.7.1	Flat Weighting	428
9.7.2	Weighting Networks	428
9.7.3	A-Weighting—The dBA Scale	428
9.8	Speech Interference	430
9.9	A-Weighting Statistics	431
9.9.1	Statistical Definitions	431
9.9.2	Determination of L_{eq}	432
9.9.3	Time Periods for L_{eq}	433
9.9.4	Adjustments to L_{eq} — L_{dn} and CNEL	435
9.10	Noise Regulations	438
9.10.1	General	438
9.10.2	Two Approaches—Common Law Nuisance/ Qualitative Versus Quantitative	439
9.10.3	Adjustments to Permissible Noise Levels	439
9.10.4	Impulse Noises	440
9.10.5	Pure Tones	440
9.10.6	Night Versus Day	441
9.11	Industrial Noise	441
9.12	Sound Propagation from Point Source to Receptor	441
9.12.1	Sound Power Versus Sound Pressure	441
9.12.2	Sound Radiation Models	442
9.12.3	Attenuation of Sound over Distance	443
9.13	Excess Attenuation of Noise over Distance	448
9.13.1	Attenuation by Atmospheric Air	448
9.14	Highway Noise (A Line Source)	454
9.15	Noise Control	456
9.16	The Community Noise Survey	459
9.16.1	Data Sheets	462
9.16.2	Effect of Wind	462
9.16.3	Precipitation	463
9.16.4	Temperature	463
9.16.5	Sound Meter Setting	463
9.16.6	Other Phenomena Encountered during Noise Surveys	464
	References	466

10. Radioactive Decay

468

10.1	Definitions and Units	468
10.1.1	Definitions	468
10.1.2	Units of Radioactive Decay and Exposure	468
10.1.3	Other Measures of Dosage	469
10.2	Some Sources of Radioactivity	469
10.3	Types of Radioactive Decay	470
10.3.1	Alpha Particle Decay	470

10.3.2	Beta Particle Decay	471
10.3.3	Gamma Radiation	471
10.3.4	Other Types	472
10.4	Pathways of Radioactive Decay	472
10.4.1	Radioactive Decay—Single Reaction	472
10.4.2	Single-Reaction Rate of Decay	477
10.4.3	Parallel Decay	481
10.4.4	Independent, Unrelated Simultaneous Decay Reactions	483
10.5	Decay Series	486
10.5.1	Maxima and Inflection Points	489
10.6	Longer Decay Chains	491
10.6.1	Example—A Five-Member Chain	491
10.7	Rate of Decay in a Radioactive Series	492
10.7.1	Secular Equilibrium	494
10.7.2	Transient Equilibrium	494
10.7.3	No Equilibrium	494
10.8	A Transition from Science to the Realm of Regulatory Control	495
10.9	Some Notable Accidents Involving Nuclear Materials	495
10.10	Governmental Regulations and Licensing Procedures	497
10.10.1	Nuclear Regulatory Commission	497
10.10.2	Regulations Governing Nuclear Material	497
10.10.3	Waste Management Consists of Licensing	497
10.10.4	Licensing	498
10.10.5	Requirements	498
10.10.6	General Licenses and Generally Licensed Devices	499
10.10.7	Further Comments on General Licenses	499
10.10.8	Periodic Testing for Contamination—Wipe Tests	501
10.11	Radioactive Waste Disposal	501
10.11.1	NRC Limits	503
10.11.2	Radioactive Waste Disposal—Conclusion	504
	References	504

Appendix A. Suggested Undergraduate Environmental Curriculum **507**

Reference	510
-----------	-----

Appendix B. Relationship among Expressions for Atmospheric Contaminants as Concentrations (ppm), Mass Flow Rates (lb/h), and Emission Factors (lb/MMBtu) **511**

B.1	Summary	511
B.2	Concentration Limits	512
B.3	Mass Flow Rate Limits	514
B.4	Emission Factor	514
B.5	Conclusion	515
	References	515

Appendix C. Burner NO_x from Ethylene Cracking Furnaces **517**

C.1	General	517
C.2	Summary	517
C.3	Introduction	518
C.4	Disclaimer	518
C.5	Regulatory Considerations	519
C.6	Technical Considerations	520
C.7	NO _x Correlation for SMR Furnace Burners	520
C.8	Extension of the Correlation to Ethylene Cracking Furnaces	522
C.8.1	Processes Are Different—A Review	522
C.8.2	But Combustion Is Similar	524
C.8.3	Firebox Temperatures Are Different	524
C.8.4	Adiabatic Flame Temperatures Are Both Different and Similar	525
C.9	NO _x Correlating Equations for Ethylene Furnaces	526
C.10	Influence of the Variables	527
C.10.1	Oxygen Dependence	527
C.10.2	Combustion Air Temperature	531
C.10.3	Fuel Temperature	533
C.10.4	Ambient Air Humidity	533
C.10.5	Hydrogen Content of Methane/Hydrogen Mixtures	534
C.10.6	Acetylene Content of Methane and Hydrogen Fuels	536
C.11	Experimental Verification of NO _x Predictions	537
C.12	Opportunities for Improvement	538
C.13	Conclusions	540
	References	540

Appendix D. What Is BOD and How Is It Measured? **543**

D.1	Summary	543
D.2	Dissolved Oxygen (DO) and Its Measurement	543
D.2.1	Overview	543
D.2.2	DO Measurement	545
D.2.3	Reproducibility	547
D.2.4	Wrap-Up	547
D.3	Biochemical Oxygen Demand (BOD) and Its Measurement	548
D.3.1	Theoretical Considerations	548
D.3.2	Mechanics of the BOD Test	551
D.3.3	BOD Experiment	552
D.3.4	Reproducibility	553
D.3.5	Wrap-Up	553
D.4	Chemical Oxygen Demand (COD) and Its Measurement	554
D.4.1	The COD Test	554
D.4.2	Reproducibility	556
D.4.3	Wrap-Up	557
	References	557

Appendix E. Cooling Water Calculations**559**

E.1	Summary	559
E.2	Tower Parameters	559
E.3	Water Parameters	561
E.3.1	Impurities in Cooling Water	561
E.3.2	pH, Alkalinity, and Hardness	562
E.3.3	Milligrams Per Liter as Calcium Carbonate	565
E.3.4	Electroneutrality	566
E.4	Control of Cycles of Concentration	567
E.5	pH Effects	568
E.5.1	The pH Increases with Cycles of Concentration	568
E.5.2	Prediction of Circulating Water pH	568
E.5.3	Dissolved CO ₂ Is Not Exactly Constant	571
E.5.4	Quantity of Acid Required	572
E.6	Total Dissolved Solids and Conductivity	573
E.6.1	TDS	573
E.6.2	Prediction of Conductivity	573
E.7	Allowable Cycles of Concentration	574
E.7.1	Langelier Saturation Index	575
E.7.2	Ryznar Stability Index	576
E.7.3	Corrosion Ratio	577
E.7.4	Allowable pH Range	577
E.7.5	Calcium Salts	577
E.7.6	Calcium and Zinc Phosphate Saturation Indexes	578
E.7.7	Silica	579
E.7.8	Other Dissolved Materials	579
E.7.9	TDS and Conductivity	580
E.7.10	Suspended Solids	580
E.8	Example Problem	581
E.9	Computerized Calculations	586
E.10	Case Studies	586
	References	588

Appendix F. Increase in Runoff from Industrial/**Commercial/Urban Development: The Telltale Bridge****591**

F.1	Summary	591
F.2	Introduction	591
F.3	The Case in Point	592
F.4	The Bridge	593
F.5	Storm Water Flow in the Swale	594
F.6	Bottlenecks	595
F.6.1	At the Bridge	595
F.6.2	At the Culverts under Road No. 1	597
F.7	Continued Flooding	597
	References	598

Appendix G. Water Quality Improvement for a Small River **599**

G.1	Summary and Conclusions	599
G.2	Introduction	600
G.3	Flow of Whippany River	600
G.4	Water Quality of River	601
	G.4.1 Dissolved Oxygen	605
	G.4.2 Biochemical Oxygen Demand	611
G.5	Waste Treatment at the Whippany Paper Board Company	615
	G.5.1 Nature of the Waste	615
	G.5.2 Treatment Before 1964–1965	615
	G.5.3 Effect of Early Treatment on Water Quality	616
	G.5.4 Upgrading of Treatment Facilities	617
	G.5.5 Effect of Improvements on Water Quality	619
	G.5.6 Summary	621
G.6	Modeling the Whippany River	621
	G.6.1 Selection of Constants	622
	G.6.2 Theoretical Calculation of Stream Velocity Impractical	622
	G.6.3 Velocity—Time of Travel Measurements	624
	G.6.4 Assembling the Model	626
	G.6.5 Results and Discussion	627
G.7	Postscript	628
	References	630
	Supplemental References for Postscript to Appendix G	631

**Appendix H. Experimental Determination of Coefficient
for Draining of Tank** **632**

H.1	Summary	632
H.2	Description of Experiment—Equipment	632
	H.2.1 Equipment Used	633
H.3	Description of Experiment—Procedure	633
H.4	Experimental Data	634
H.5	Data Analysis—Falling Head/Unsteady-State Experiment	638
H.6	Time to Drain the Tank	642
H.7	Steady-State Experiment	643
	H.7.1 Transient Solution to Fill and Drain Problem	644
	References	645

Appendix I. Noise Case Studies **647**

I.1	Case 1—Sound Meter Readings behind a Highway Noise Barrier	647
	I.1.1 Theory	647
	I.1.2 Synopsis of the Measurements	647
	I.1.3 Turnpike Noise Barriers	648

I.1.4	Turnpike Noise Measurements	650
I.1.5	Neighborhood Side of the Noise Barrier	650
I.1.6	Noise Measurements behind the Barrier	653
I.2	Case 2—Another Noise Barrier Study	654
I.2.1	Highway Noise Data	655
I.2.2	Summary of Results	656
I.3	Case 3—Successful Noise Permitting Procedure	656
I.3.1	The Project	658
I.3.2	Method of Execution	658
I.3.3	The Background Noise Survey	658
I.3.4	Estimate of Noise from New Equipment	659
I.3.5	Postconstruction Noise Survey	
	Confirmed Compliance	659
References		659

Appendix J. Air Pollution Aspects of the Fluid Catalytic Cracking Process 661

J.1	Summary	661
J.2	Introduction	661
J.3	FCC Process Description	662
J.3.1	FCC Cracking Catalyst	662
J.3.2	The Reactor	664
J.3.3	The Regenerator	667
J.4	Atmospheric Contaminants from the Regenerator—Origin and Treatment	667
J.4.1	Carbon Monoxide (CO)	668
J.4.2	Particulate Matter (PM)	669
J.4.3	Sulfur Oxides (SO _x)	671
J.4.4	Oxides of Nitrogen (NO _x)	672
J.5	Summary	676

Appendix K. Case Studies in Air Emissions Control 681

K.1	Summary	681
K.2	Addition of Steam to Reduce Burner NO _x	681
K.3	Addition of SCR to Reduce Burner Emissions	682
K.4	Integration of a Furnace with Gas Turbine Exhaust	683
References		684

Appendix L. Combustion of Refinery Fuel Gas 685

L.1	Refinery Fuel Gas	685
L.2	Combustion Calculations for Refinery Fuel Gas	686
L.3	EPA Method 19 Combustion Calculations	686

L.4	<i>F</i> Factors for Refinery Fuel Gas	687
L.4.1	Calculated <i>F</i> Factors for Published Natural Gas Compositions	689
L.5	Example—Use of <i>F</i> Factors in Combustion Calculations	691
L.5.1	Stoichiometric Case	691
L.5.2	3% Excess O ₂ Case	694
L.6	Conclusions	696
